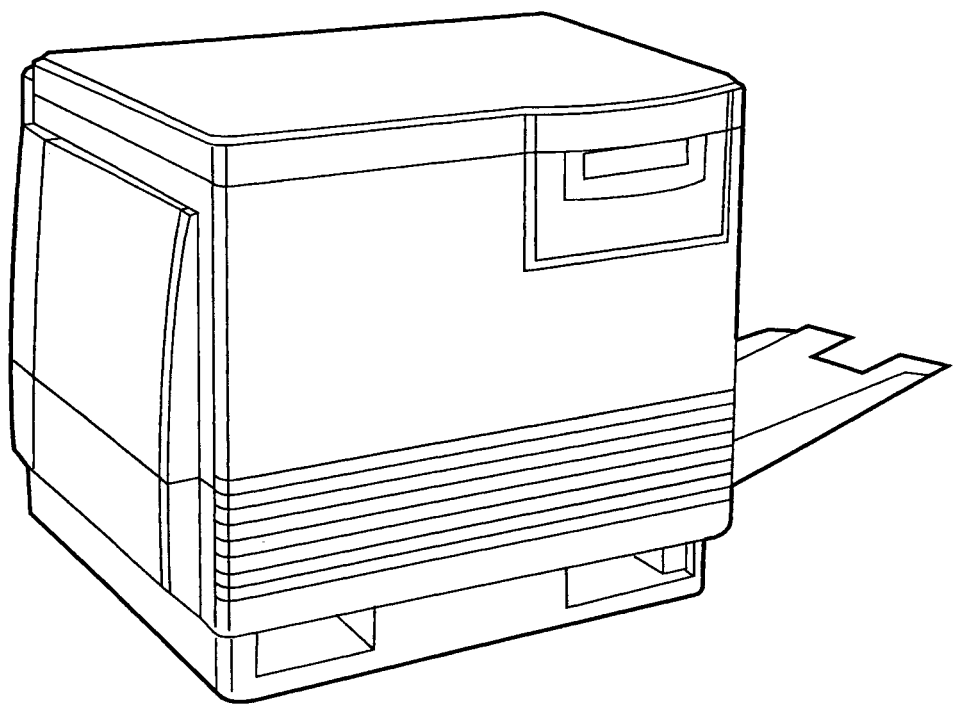
Service Manual

Color Laser Printer

KX-P8410

SD



Panasonic

Printed by: Schaltungsdienst Lange, Berlin (Germany)

⚠ WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public.
It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product.
Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

DANGER: Invisible laser radiation when open and interlock defeated. AVOID DIRECT EXPOSURE TO BEAM.	CAUTION: Invisible laser radiation when open and interlocks defeated. AVOID EXPOSURE TO BEAM.	VORSICHT: Unsichtbare Laserstrahlung, wenn Abdeckung geöffnet und Sicherheitsverriegelung überbrückt. NICHT DEM STRAHL AUSSETZEN.	ATTENTION: Rayonnement laser invisible dangereux en cas d'ouverture et lorsque la sécurité est neutralisée. EXPOSITION DANGEREUSE AU FAISCEAU.	 Class 3B	
PELIGRO: Cuando se abre y se invalida el bloqueo, se producen radiaciones invisibles de láser. EVÍTESE LA EXPOSICIÓN A TALES RAYOS.	VARNING: Osynlig laserstrålning när denna del är öppnad och spärrar är urkopplade. STRÅLEN ÄR FARLIG.	VARO!: Näkymätöntä avattaessa ja suojalukitus ohitettaessa olet alttiina lasersäteilylle. ÄLÄ KATSO SÄTEESEEN.	VARNING: Osynlig laserstrålning när denna del är öppnad och spärren är urkopplad. BETRAKTA EJ STRÅLEN.	ADVARSEL: Usynlig laserstråling ved åbning når sikkerhedsafbrydere er ude af funktion. UNDGÅ UDSÆTTELSE FOR STRÅLING.	ADVARSEL: Usynlig laserstråling når deksel åpnes og sikkerhedslås brytes. UNNGÅ EKSPONERING FOR STRÅLEN.

Printer	Fusing System	Heat and Pressure Rollers
	Photoreceptor	Organic Photoconductor (OPC)
	Development Process	One component non magnetic development
	Consumables/Life	Toner Cartridges 12,000 pages average (Black), 10,000 pages average (C.M.Y) (5% image area)
	Power Saving Mode	To conserve energy and reduce operating cost, this printer is equipped with a programmable power save feature. The printer is factory set with the power save feature turned on and programmed to 30 minutes to comply with Energy Star requirements.
	Safety and EMC Standard	For 120 VAC equipment: UL 1950, Listed FCC Part 15, Subpart B "Class B", Certified
Paper	Paper Weight	Media tray* — One-sided printing — B&W: 60 to 105 g/m² (16 to 28 lbs.) Media tray* — One-sided printing — Color: 70 to 105 g/m² (20 to 28 lbs.) Multi-purpose tray — One-sided printing — B&W: 75 to 165 g/m² (20 to 44 lbs.) Multi-purpose tray — One-sided printing — Color: 75 to 165 g/m² (20 to 44 lbs.) Multi-purpose tray — Two-sided printing — B&W: 75 to 105 g/m² (20 to 28 lbs.) Multi-purpose tray — Two-sided printing — Color: 90 to 105 g/m² (24 to 28 lbs.)
	Thickness	3.7 to 7.5 mils (1 mil=1/1000")
	Moisture Content	4% to 6%
	Smoothness	100 to 300 Sheffield
	Acid Content	5.5 PH minimum
	Fusing Compatibility	Must not scorch, melt, offset material or release hazardous emissions when heated to 200°C (392°F) for 0.1 second
	Cutting Dimensions	±0.0313 inch of normal, corners 90° ±4°
	Grain	Long grain
	Cut Edge Conditions	Cut with sharp blades, no paper dust
	Ash Content	Not to exceed 10 %
	Curl	No allowable curl toward the side to be printed
	Packing	Polylaminated moisture proof ream wrap
	Paper Size	A4 8.3 " X 11.7" (210 X 297 mm) Legal 8.5" X 14" (216 X 356 mm) Letter 8.5" X 11" (216 X 279 mm)
	Transparency Size	A4 8.3 " X 11.7" (210 X 297 mm) Letter 8.5" X 11" (216 X 279 mm)
	Envelope Size	Com-10 Env. (Envelope #10) 4.13" X 9.5" (104.9 X 241.3 mm)

Types of paper to avoid

1. Extremely smooth or shiny paper or paper that is highly textured
2. Letterhead imprinted with low temperature or thermography. These materials may transfer onto the fusing roller and cause damage. Any pre-printed paper should use inks compatible with 200°C (392°F) for 0.1 second.
3. Damaged or wrinkled paper, or paper with irregularities such as tabs, staples, etc.
4. Multipart forms or carbonless paper
5. Paper with a 25% or more cotton and/or fiber content
6. Ink jet paper (It may transfer onto the fuser roller and cause damage.)

* We do not recommend the use of 105 g/m² (28 lbs.) paper in areas of high or low humidity and temperature since paper feed problems may be experienced.

Device Cables (Not included with Printer)

Cables	Description
(1) Parallel/Centronics	36-pin high-density plug to 25-pin DSUB plug; less than 2.0 m (6.56 ft.)
	Connects the printer to a PC parallel port.
(2) SCSI-2 HD to SCSI-2 HD	50-pin high-density plug to 50-pin high-density plug; less than 2.0 m (6.56 ft.)
	Connects the printer's SCSI port to a PC.
(3) SCSI-2 HD to SCSI-1 LD	50-pin high-density plug to 50-pin low-density plug; less than 2.0 m (6.56 ft)
	Connects the printer's SCSI port to a PC.

As an Energy Star Partner, Panasonic has determined that this product meets the Energy Star guidelines for energy efficiency. The international Energy Star℠ Logo is valid in U.S.A., Europe and Japan only.

All about media

- **The recommended media is as follows;**

  Letter/Legal: Hammermill LASERPRINT 90 g/m² (24 lbs.)

  A4: NEUSIEDLER COLOR COPY 90 g/m² (24 lbs.)

  For the finest resolution and the brightest, most consistent colors, use a high grade laser paper:

  75-105 g/m² (20-28 lbs.) paper in the media trays and 60-120 g/m² (16-32 lbs.) with multi-purpose tray.

  Transparency: 3M CG3700

- **Labels**

  Use only full 8.5" x 11" or A4 label sheets rather than die-cut label sheets through the multi-purpose tray. Die-cut labels may peel off from their backing and stick inside the imaging unit or fuser.

- **Envelopes**
  This printer prints black text only using the following high quality #10 laser envelopes with diagonal steams. Do not insert more than one envelope at a time.
  - A thin, sharply creased leading edge.
  - Paper weight of 90 g /m² (24 lbs.)
  - Flat and free of curls, wrinkles, nicks, etc.

- Make sure that the media trays are free of dust. Dust and dirt in a media tray can be transferred to the paper or transparency, resulting in poor print quality.

- Handle paper and transparencies with both hands at the edges to avoid creases and fingerprints, which can result in poor print quality.

- Store paper and transparencies in the original dust-free package.

- To prevent transparencies or paper from sticking together, fan them before loading into the appropriate media tray.

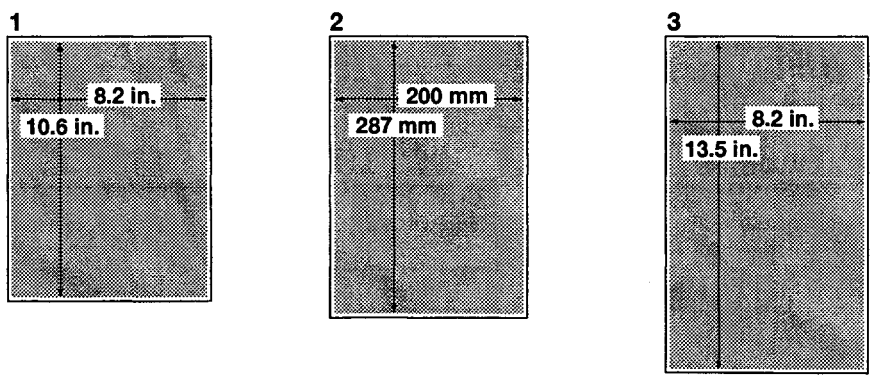
- If the optional 2nd cassette feeder is used: A media tray can be installed in any of the three tray slots; however, the transparency tray should only be inserted in the upper and middle tray slots.

Margins and Print Area

When the printer places an image on media, the image (print area) is a bit smaller than the media size. Page margins adjustment may be needed in an application software to match the print area.

The following table lists the page sizes, the maximum print areas, and the margins for the media sizes supported on this printer.

Media	Page Size	Print Area	Margins		
			Top	Bottom	Sides
1. A/Letter (U.S.)	8.5" x 11" (216 x 279 mm)	8.2" x 10.6" (208 x 269 mm)	.22 " (5.6 mm)	.22" (5.6 mm)	.14" (3.6 mm)
2. A4 (Metric)	8.3" x 11.7" (210 x 297 mm)	7.9" x 11.3" (200 x 287 mm)	.2" (5.1 mm)	.19" (4.7 mm)	.19" (4.7 mm)
3. Legal	8.5" x 14" (216 x 356 mm)	8.2" x 13.5" (208 x 343 mm)	.23 " (5.8 mm)	.23" (5.8 mm)	.14" (3.6 mm)



RAM and printer capabilities

The printer features 8 Mbytes of base RAM and two SIMM connectors that accept 4, 8, 16 and 32-Mbytes RAM SIMMs. With additional RAM memory the printer's capabilities increase as follows.

■When using the Printer Driver and Utilities

Total Memory	Selectable Print Quality Mode	Printable without Memory Overflow
8 MB (Standard)	Fast (300 dpi)	Letter, A4*
	Standard (600 dpi)	Letter, A4*
16 MB (Add 8MB)	Fast (300 dpi)	Letter, A4, Legal
	Standard (600 dpi)	Letter, A4*
56 MB (Add 48MB)	High Quality (1200 dpi)	Letter, A4*
72 MB (Add 64MB)		Letter, A4, Legal

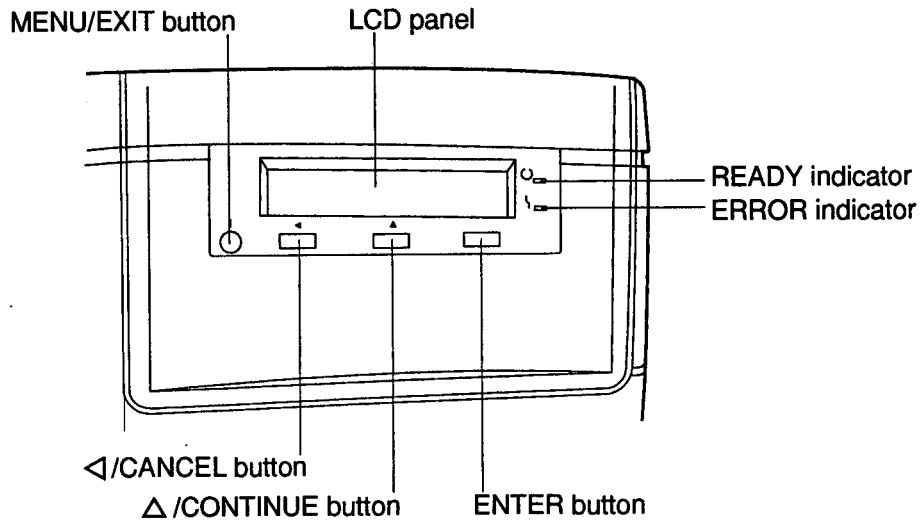
* Documents can be printed on Legal size paper when the print style is set to Color Graphics provided the data size of the documents is small.

Note: More than 32MB is required on the printer to use "Printer memory usage" in the printer driver.

1.2 Options, Accessories and Supplies

KX-PKC3	Letter paper tray
KX-PKC4	A4 paper tray
KX-PKC5	Letter transparency tray
KX-PKC6	A4 transparency tray
KX-PKC7	Legal paper tray
KX-PCSF1	2nd Cassette Feeder
KX-PEMC7	4 MB SIMM
KX-PEMC8	8 MB SIMM
KX-PEMC9	16 MB SIMM
KX-PEMCA	32 MB SIMM
KX-PNBC4	Network Card for Ethernet
KX-PDPK5	Toner cartridge : Black
KX-PDPC5	Toner cartridge : Cyan
KX-PDPM5	Toner cartridge : Magenta
KX-PDPY5	Toner cartridge : Yellow
KX-PFSU5	Fuser
KX-PPRC5	Imaging unit
KX-PTRU5	Transfer unit
KX-PWBR5	Oil Supply Roll

1.3 Control Panel



(1) Liquid Crystal Display (LCD)
The printer is equipped with a 2-line, 48-character LCD (2 x 24 characters) to display the printer's status/ error messages or menu settings.

(2) READY indicator (green)
- ON: the printer is ready for operation.
- Blinking: the printer is warming up or in the Menu mode.
- Blinking fast: the printer is printing.

(3) ERROR indicator (orange)
- ON: internal error (call service error) has occurred.
- Blinking: user correctable error, such as media jam, open door, or a missing replaceable component (e.g. Toner) has occurred.

Media jam
Any of the printer doors are open
Any of the user - replaceable components are missing

(4) MENU/EXIT button
- When this button is pressed in the "Ready" status, the printer enters the Menu mode.
- When this button is pressed in the Menu mode, the printer exits the Menu mode.

The Menu has the following 5 items.

(4-1) Test Page
Prints general information on printer settings and configuration.

(4-2) Color Calibration
Adjusts the toner density for each color independently or all colors simultaneously.

Calibration Offset : Adjusts the density for all colors (CYAN, MAGENTA, YELLOW and BLACK) simultaneously. Setting a larger number provides darker colors and setting a smaller number provides lighter colors.

CYAN / MAGENTA / YELLOW / BLACK: Adjusts the density for each color. Setting a larger number provides darker colors and setting a smaller number provides lighter colors.

Calibration Test Print : Prints a Color Calibration Page with the current density settings.

Reset Calibration : Setting "YES" resets the current settings to the default settings.

(4-3) System Setting

Configures the printer.

Energy Star : With Energy Star set to ON, the printer enters the Energy Star mode when the printer is idle for 30 minutes.

Auto Continue : With Auto Continue set to ON, the printer automatically recovers from the following error conditions if no recovery operation is done for 10 seconds.
- Memory Overflow
- SCSI communication error

Data Timeout : With Data Timeout set to ON, the printer automatically returns to Ready status if the printer does not receive any data from a computer within the time period set in this selection.

(4-4) Network

Sets the addresses used in TCP / IP Protocol.
This menu appears when the optional network card is installed. When setting the address, use the ◁**/CANCEL** button to move the cursor and the △**/CONTINUE** button to increase the numerical value.

(4-5) Maintenance

Displays the number of pages, indicating when the following supplies need to be replaced.
The following table lists the average life of each supply, (based on a 5% image area).

Supplies	Average life
Imaging Unit*	60,000 images
Transfer Unit	80,000 pages

Supplies	Average life
Fuser Unit*	31,000 images
Oil Supply Roll*	15,500 pages

*When a supply is replaced with a new one, the printer will automatically reset its page counter to 0.

(5) ◁/CANCEL button

When the printer is in the Menu mode, pressing this button:
- Displays the previous menu, item or selection.
- Decreases the current numerical value of the selection.
- Moves the cursor to left.

(6) △/CONTINUE button

- When an error message such as "Memory Overflow" or "SCSI Communication Error" is displayed on the LCD, press this button to recover from an error situation.
- When the printer is in the Menu mode, pressing this button:
  —Displays the next menu, item or selection.
  —Increases the current numerical value of the selection.

(7) ENTER button

This button is effective only when the printer is in the Menu mode. Pressing this button:
- Enters a Sub Menu.
- Activates a selection.

1.4 Rear Panel

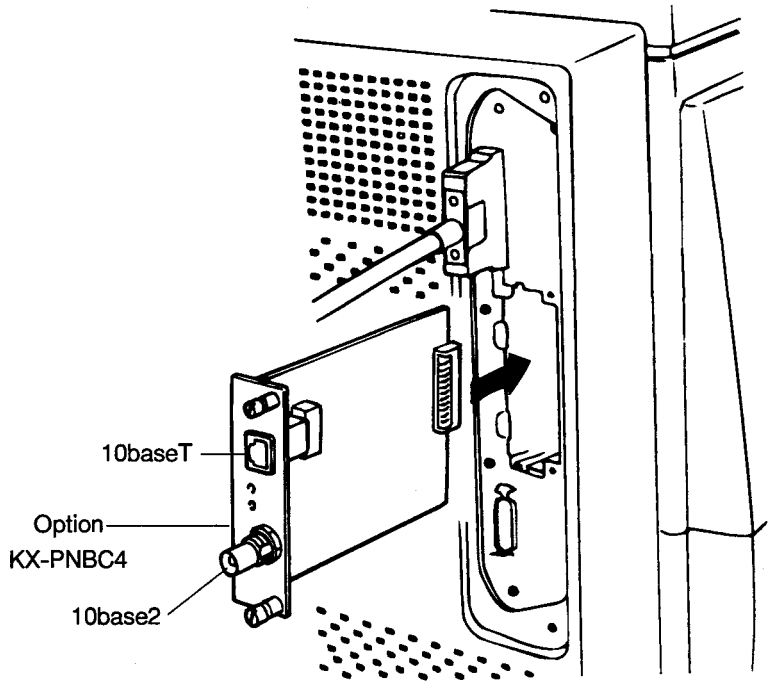
Connectors

The rear panel is equipped with the following interface connectors.

a) Parallel (high density connector)
b) SCSI (high density connector)

With the addition of a network card, the printer can feature either of these groups of connectors:

- ThinNet (10base2) and Twisted Pair (10baseT) Ethernet connectors. This is Option KX-PNBC4.



Network card LEDs (Network card is optional.)

Two LEDs on the face of the optional network card verify LAN connection and network activity.

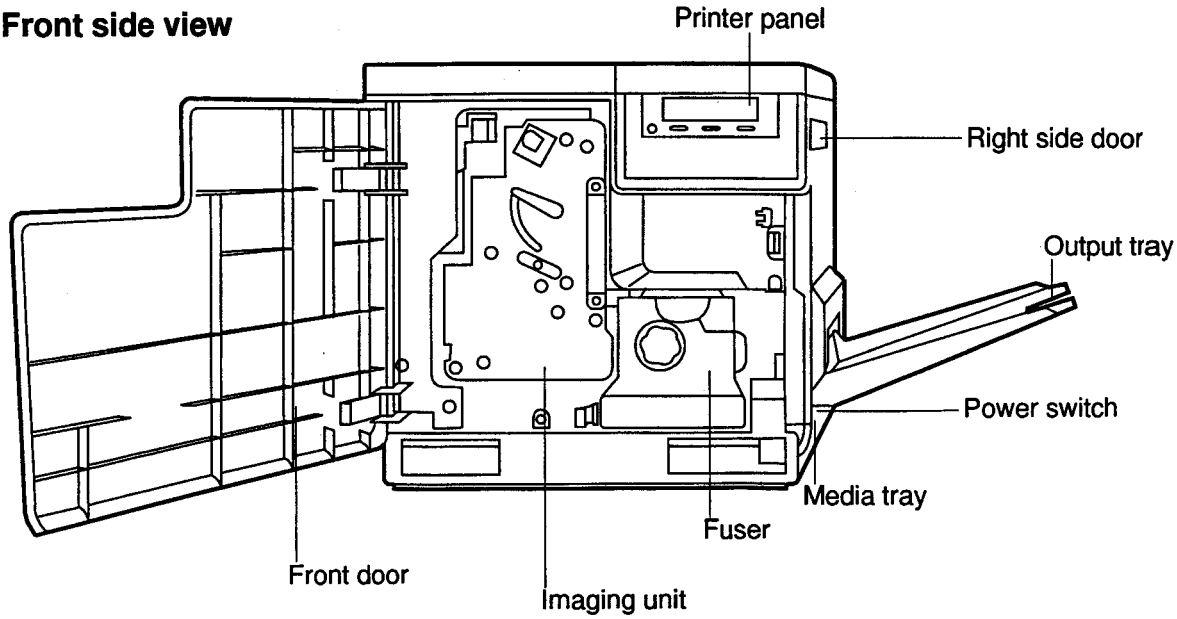
Ethernet

The table lists the conditions indicated by the LINK and NET ACT display LEDs on an Ethernet printer server.

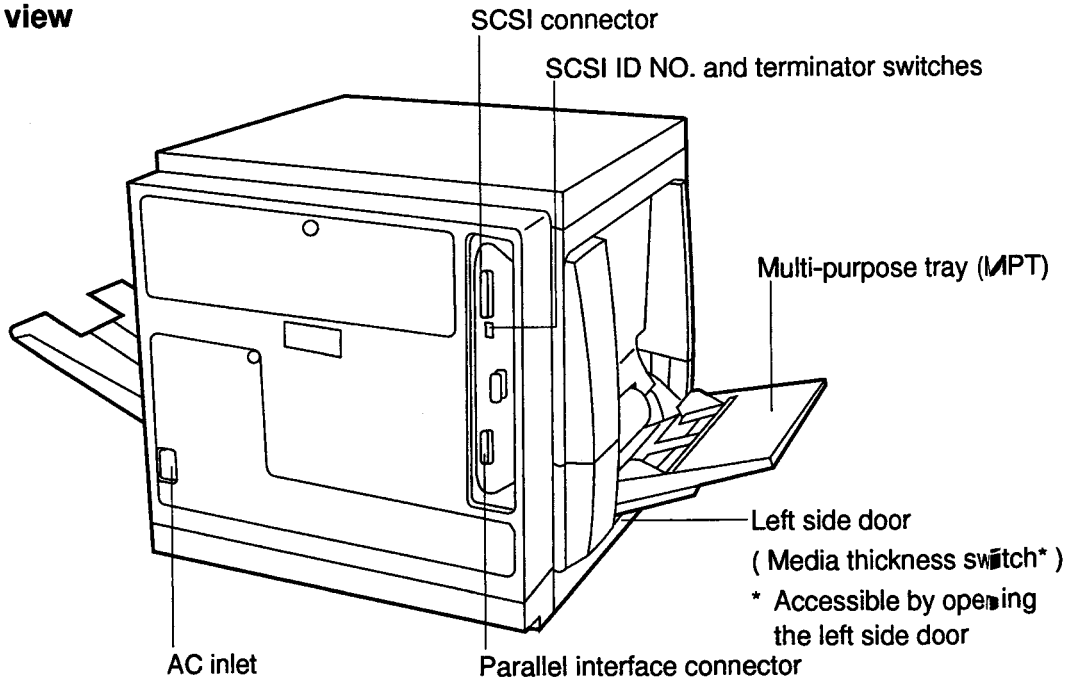
Condition	LINK Yellow	NET ACT Green
LAN not connected	off	off
BNC connected	off	random blinking
UTP connected	on	random blinking

1.5 Parts Identification

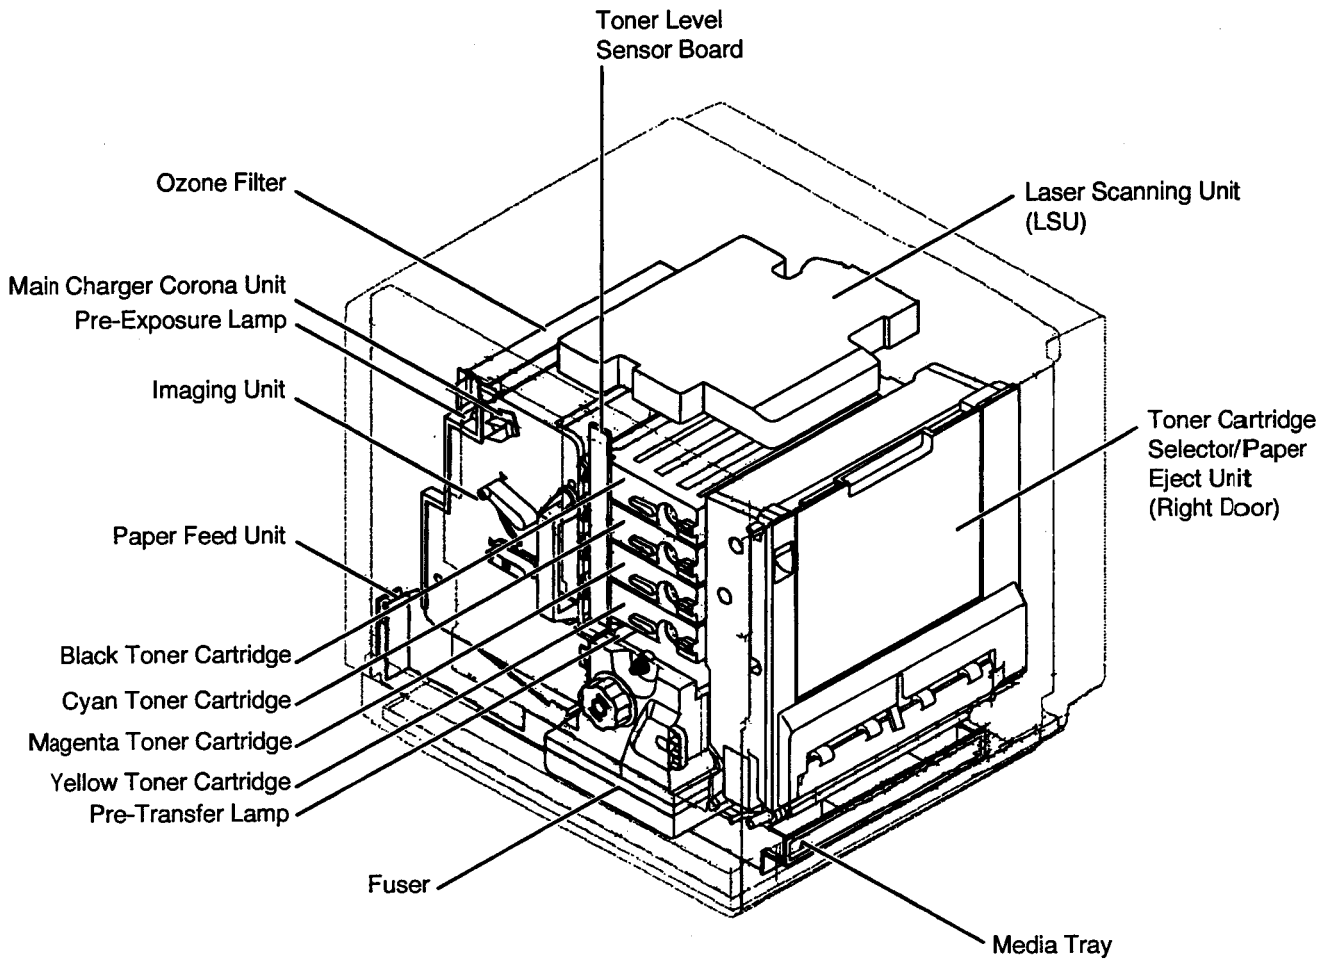
Front side view



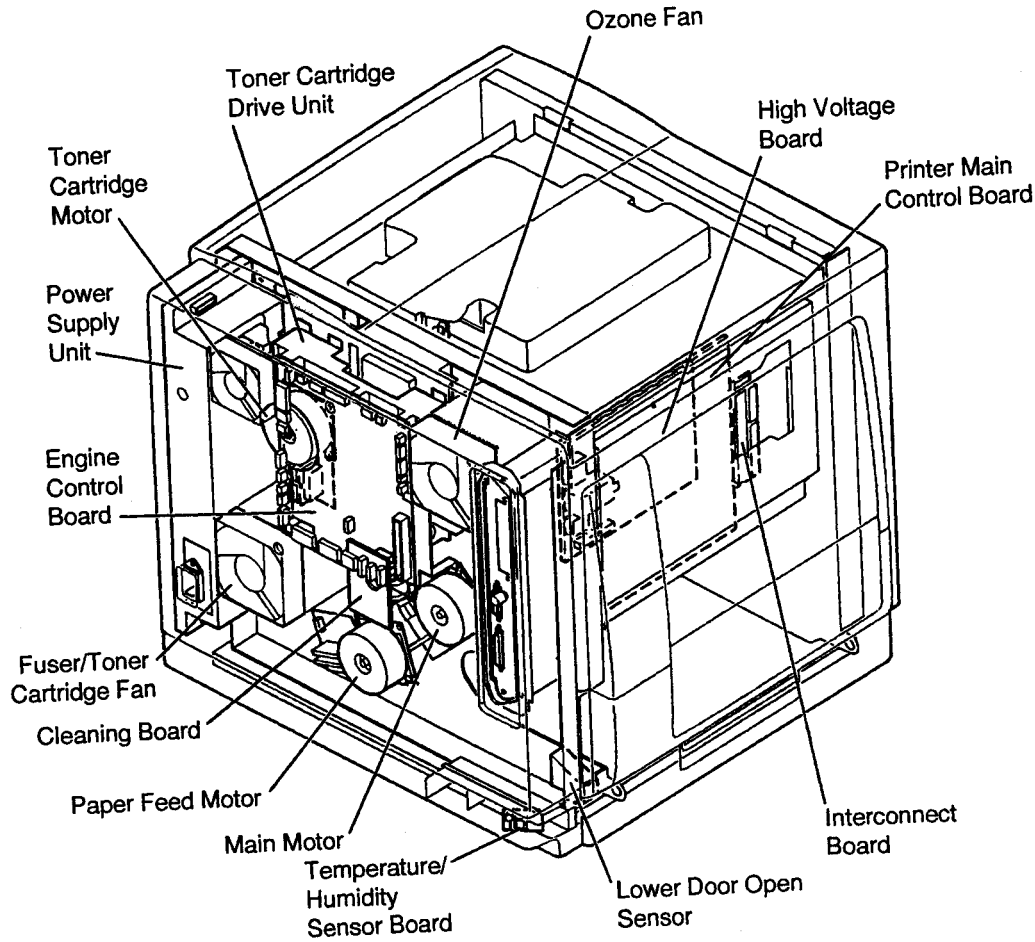
Rear side view



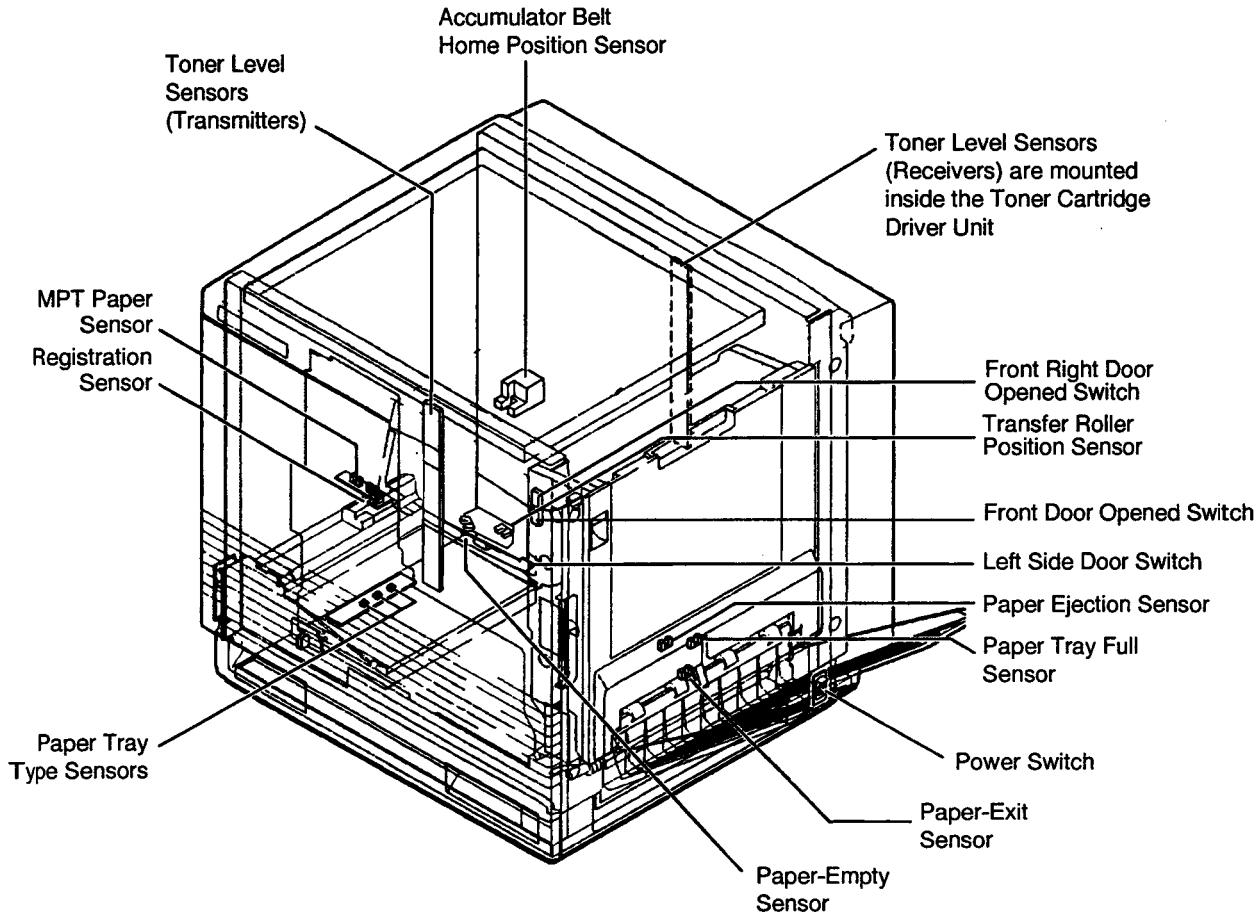
1.6 Component Layout



1.7 Electrical Components



1.8 Switches/Sensors Identification



2. Installation, Setup, and Repacking

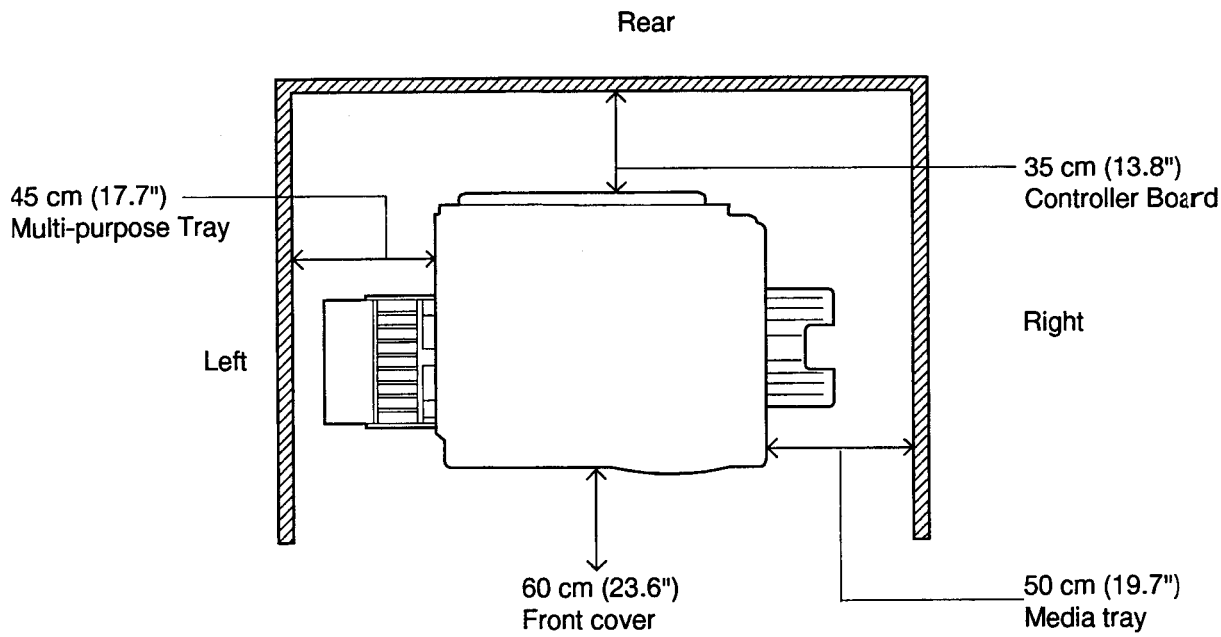
2.1 Installation Requirements

2.1.1 Environment

1.Temperature Range :10°C~32.5°C (50°F~90.5°F)(Temperature fluctuation ± 10°C per hour or less)
2.Humidity Range :20% RH~80% RH (Humidity fluctuation ± 20°C per hour or less)
3.Weight :47.5 kg (105 lbs.)
4.Place the unit on a stable, level surface.
5.Do not install the unit under the following conditions.
a. Extremely high or low temperature
b. Extremely high or low humidity
c. Direct exposure to sunlight
d. Areas of high dust concentration
e. Areas of poor ventilation
f. Areas exposed to chemical fumes
g. Areas with extreme vibration
h. Directly in air conditioning flow

2.1.2 Minimum Space Requirements

1. Right :50cm (19.7")
2. Left :45cm (17.7")
3. Rear :35cm (13.8")



2.2 Setup

2.2.1 Removing the Packing Material

1. Remove the plastic bag from the printer.

2. Remove any adhesive tape that holds the output tray against the printer.

Note: Please do not throw away the packing materials. They may be required to ship or transport the printer. To provide optimum print quality, the unit must be kept upright and level at all times.

2.2.2 Installing the Optional 2nd Cassette Feeder

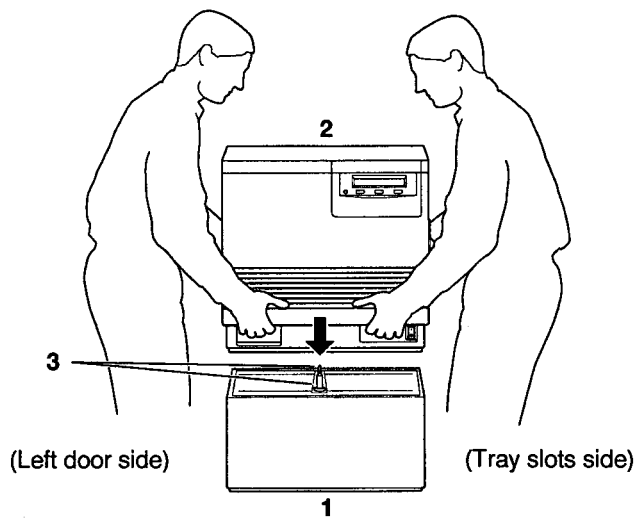
Warning: The printer weighs about 47.88 kg (105.6 lbs.) and the 2nd Cassette Feeder weighs about 14.4 kg (36.3 lbs.). Observe standard precautions for lifting heavy objects.

The printer is not permanently attached to the 2nd Cassette Feeder. When moving the printer, turn the power off and remove the power cord, then move the pieces separately; moving the printer incorrectly may damage it and may cause personal injury.

1. Place the 2nd Cassette Feeder on a solid table or cart selected for the printer.

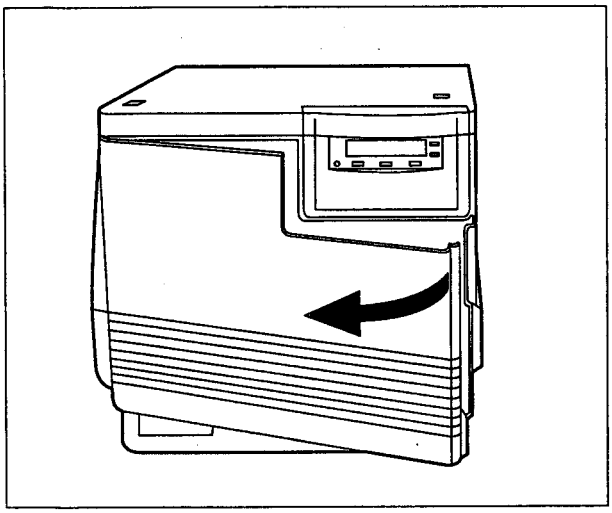
2. Place the printer on top of the 2nd Cassette Feeder. Always keep the printer upright.

3. Make sure that the left and right alignment pins fit in the holes in the base of the printer.

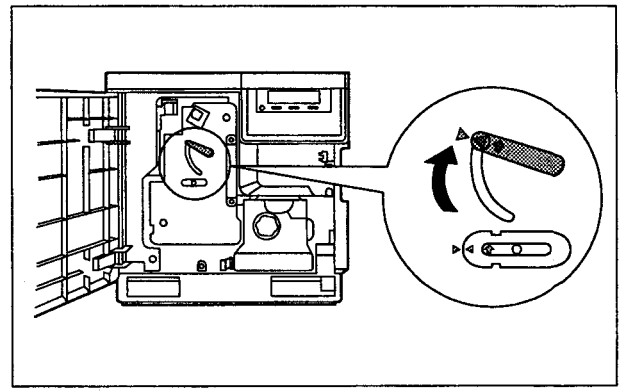


2.2.3 Preparing the Imaging Unit

1. Open the front door.



2. Turn the upper green lever clockwise until it stops and the arrows are aligned. (This applies tension to the internal belts).



3. Close the front cover.

2.2.4 Installing the Toner Cartridges

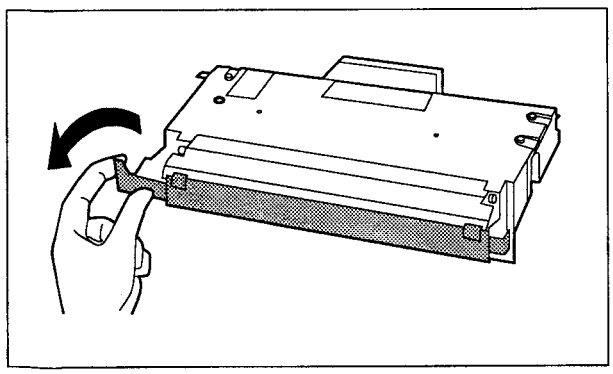
Please read these instructions before using the printer.

Note:

- The toner cartridges that are shipped with the printer are starter cartridges. They are installed in exactly the same manner as the standard cartridges; the only difference is that the starter cartridges have less toner. (The page life expectancy is 3,000 pages, which is based on a 5% image area.)

1. Remove the packaging from the toner cartridge.

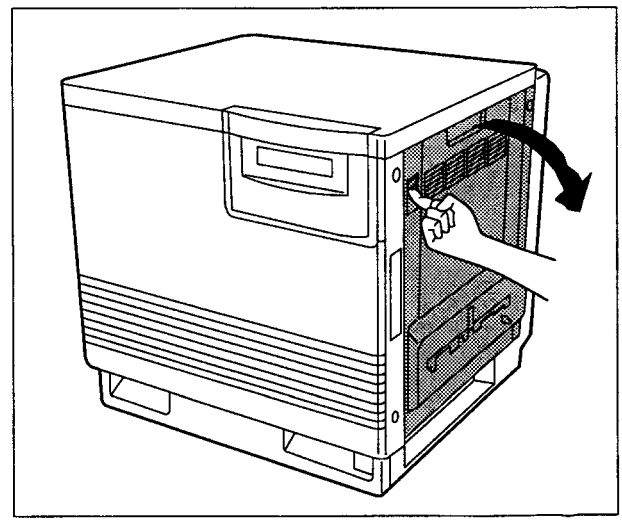
2. Remove the shipping cover from the cartridge.



Caution:

- Do not tilt the cartridge to avoid the toner spill.

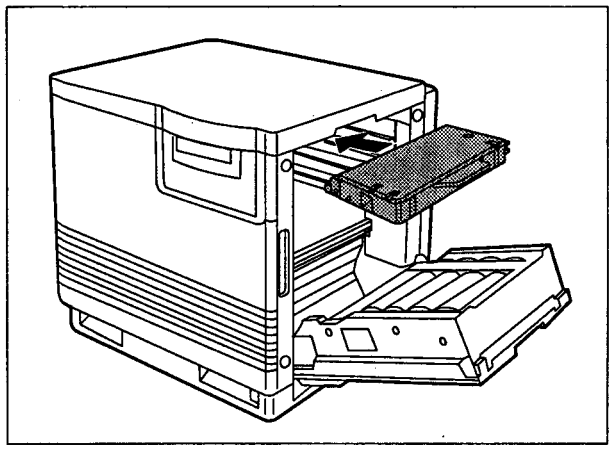
3. Open the printer's right side door.



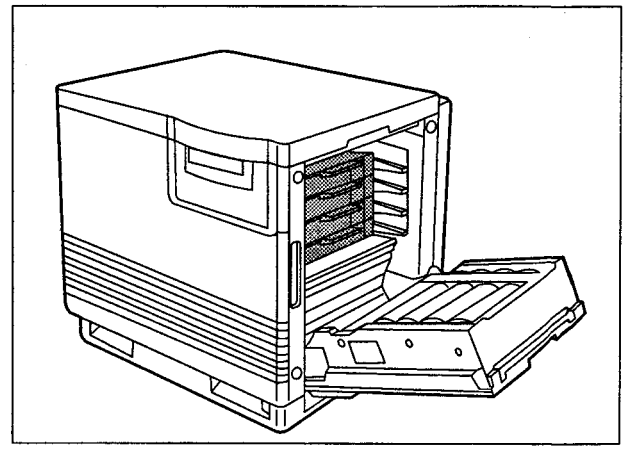
Caution:

- Do not leave the right side door open for a long time; the imaging unit is exposed to light and will be damaged.

4. Insert the toner cartridge in the appropriately labeled slot. From top to bottom, the cartridge order is BLACK, CYAN, MAGENTA, and YELLOW.



5. Repeat steps 1, 2 and 4 for each toner cartridge. When all the toner cartridges have been installed, go to step 6.



6. Close the right side door.

Note:
- Save all packing material for shipping purposes.

2.2.5 Adding Paper or Transparencies

The printer uses five different trays:

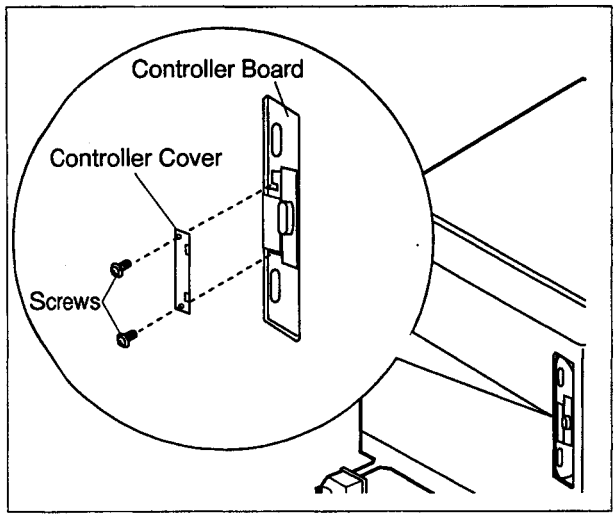
Tray	Size
A4 Paper	8.27" x 11.7" (210 x 297 mm)
A4 Transparency	8.27" x 11.7" (210 x 297 mm)
Letter Paper	8.5" x 11" (216 x 279 mm)
Letter Transparency	8.5" x 11" (216 x 279 mm)
Legal paper	8.5" x 14" (216 x 356 mm)

Notes:
- Make sure that correct media is loaded. Each tray is designed and labeled for only paper or transparency. If the wrong media type is loaded in a tray, an error message will be displayed when printing is attempted.
- If the 2nd Cassette Feeder is installed and the automatic tray-switching feature (for example, for a large print job) is used, make sure that all trays in the printer at any one time are the same media type and size.
- To optimize the printer's performance, always use clean, unused media.
- Be careful not to leave fingerprints on the media, which can result in a smudged print.
- Reusing media that has been fed through the printer (for example, after jams or if the media is ejected without being printed) can reduce the life of the consumables and paper path components.

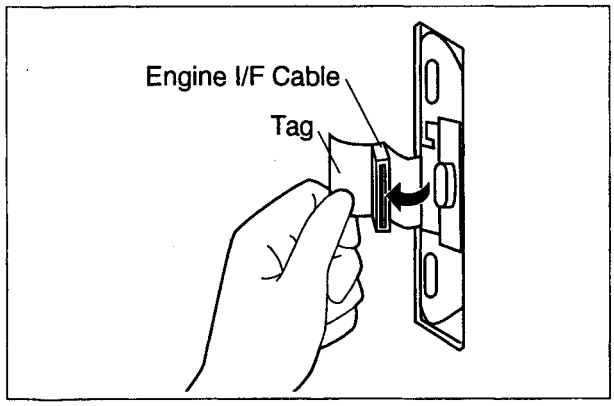
2.3 Installing RAM SIMMs (Option)

1. Turn off the printer. Do not unplug the printer; this preserves a ground path to dissipate static charges.

2. Remove the two screws and the connector cover.



3. Hold the tag and pull out the engine I/F cable from the controller board.

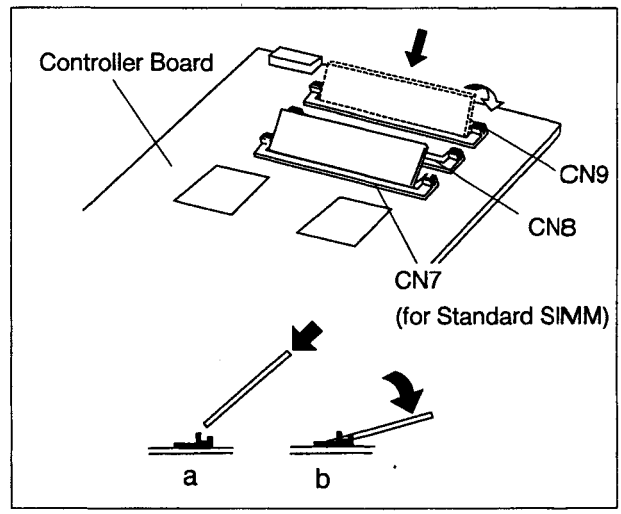


4. Remove the two screws from the controller board.

5. While holding the engine I/F cable toward the left, pull out the controller board.

6. When installing a single RAM SIMM.
   Insert a memory module in connector CN8 or CN9 and tilt the module down until it locks in place. When the SIMM is properly inserted, a tab on each end of the connector slips into a hole on each end of the RAM SIMM. Also, a pawl on each end of the connector latches around each end of the RAM SIMM to lock it in place. Go to step 8.

7. When installing two RAM SIMMs.
   Insert the appropriate memory module in connector CN8 and CN9 and tilt the module down until it locks in place. When the SIMM is properly inserted, a tab on each end of the connector slips into a hole on each end of the RAM SIMM. Also, a pawl on each end of the connector latches around each end of the RAM SIMM to lock it in place.



8. While holding the engine I/F cable toward the left, reinstall the controller board.

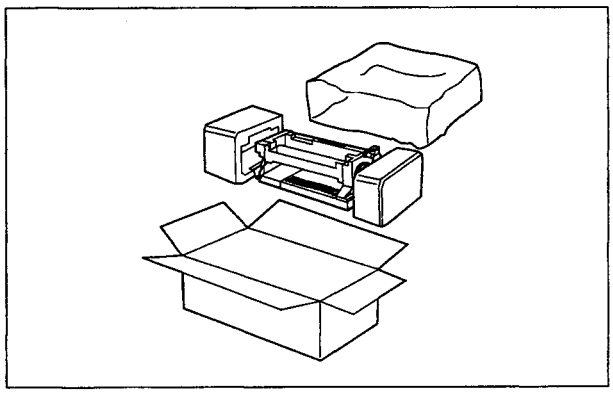
9. Reinstall the two screws.

10. Connect the engine I/F cable to the controller board.

11. Reinstall the connector cover and the two screws.

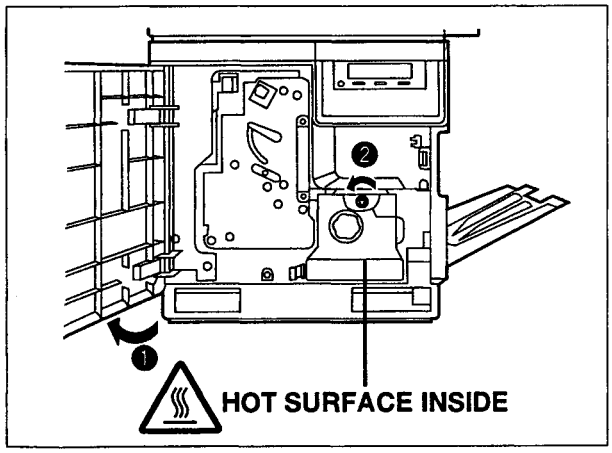
2.4 Replacing the Fuser Unit

1. Remove the new fuser from its packaging; keep the fuser upright.

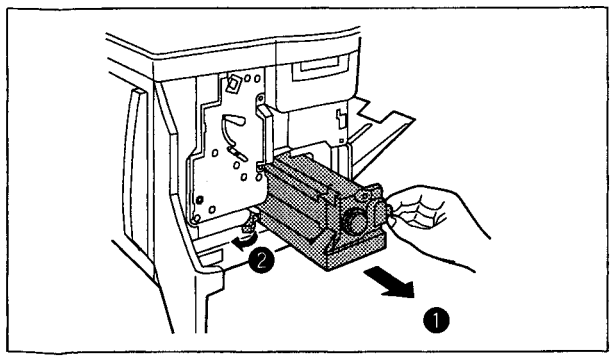


2. ❶ Open the front door.
   ❷ Turn the small green thumbscrew counterclockwise to unlock the fuser.

   Caution:
   • The fuser is hot; to avoid personal injury, wait 10 minutes for the fuser to cool before touching it.

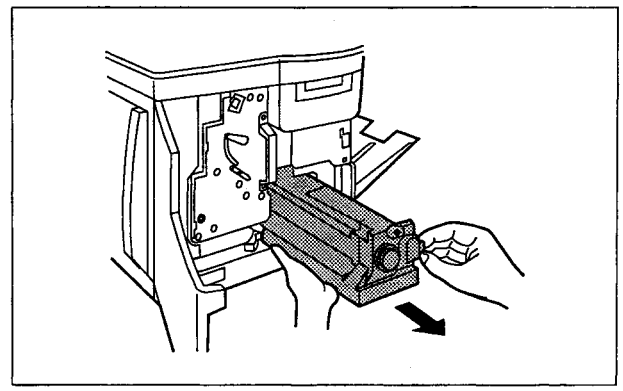


3. ❶ Grasping the green tab on the right, slide the fuser out until the safety catch stops it.
   ❷ Press the green lever on the left to release the safety catch.

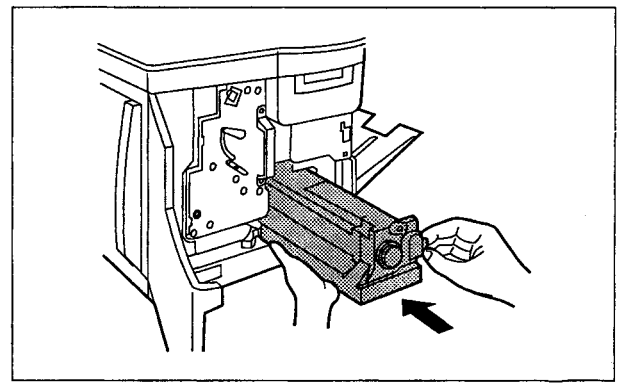


4. Hold the fuser as shown below, and slide it out of the printer.
   • Dispose of the fuser as normal office waste.

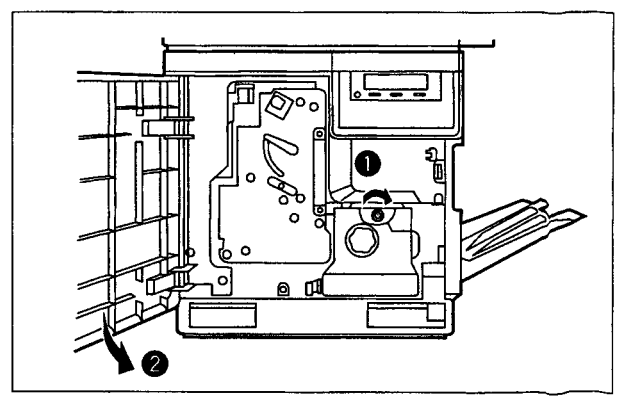
   Caution:
   • The fuser weighs approximately 3.1 kg (6.8 lbs.). Take care when handling it.



5. Insert the new fuser into the printer.

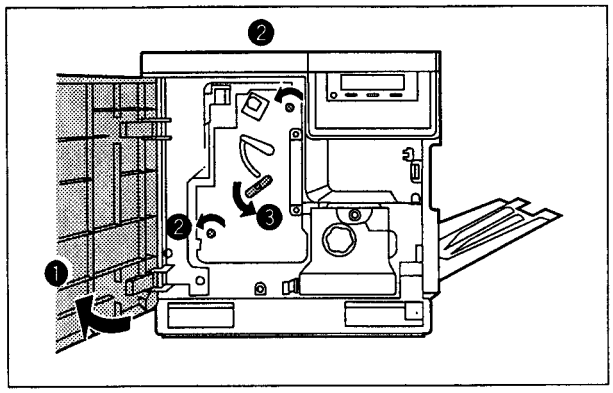


6. ❶ Turn the small green thumbscrew clockwise to lock the fuser.
   ❷ Close the front door.



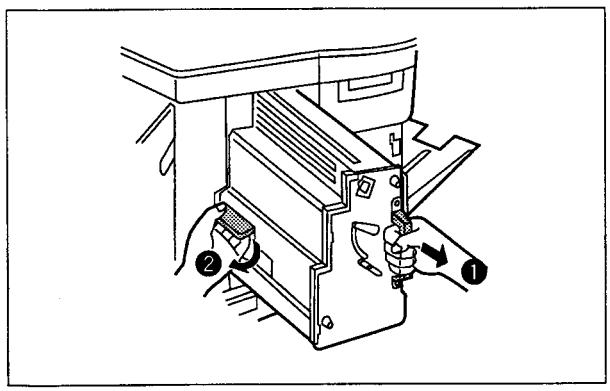
2.5 Replacing the Imaging Unit

1. ❶ Open the front door.
   ❷ Loosen the two thumbscrews by turning them counterclockwise.
   ❸ Turn the lower green lever 180° counterclockwise.



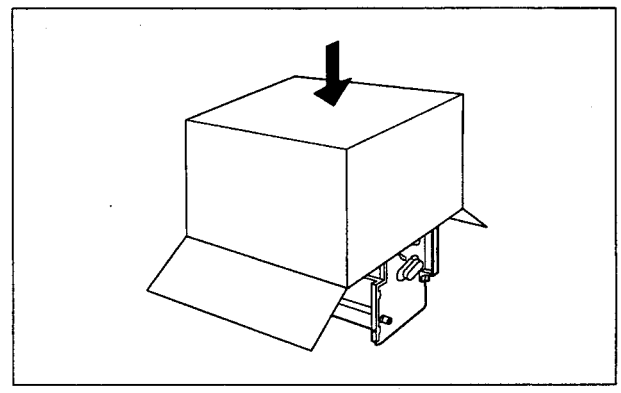
2. ❶ Grasping the front green handle, slide the unit out until it catches.
   ❷ Lift up the green handle on the left. Pull the imaging unit out of the printer.

Caution:
- The imaging unit weighs approximately 6.5 kg (14.3 lbs.). Always use the handles when lifting it.

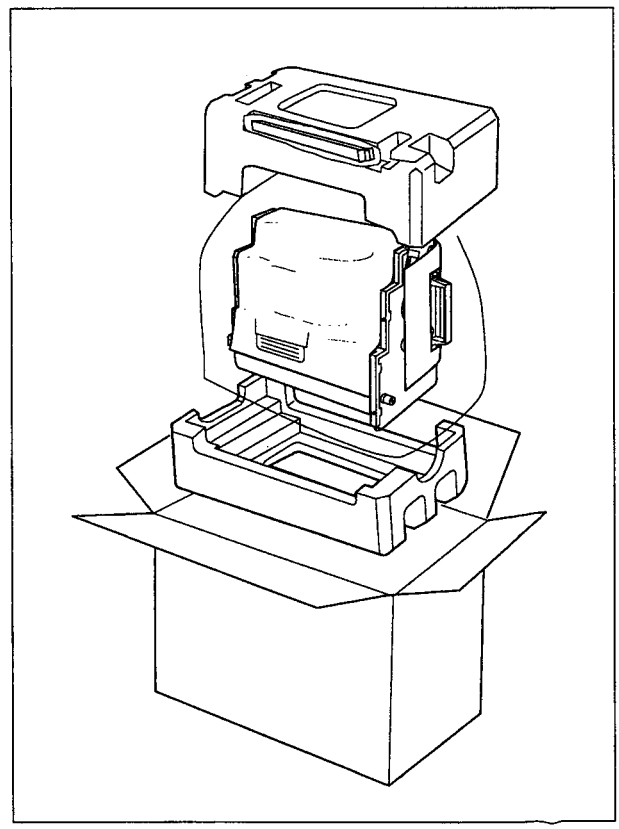


3. If the imaging unit is to be reinstalled, cover it with an empty box or place it in a dark cabinet to protect it from light exposure. If the unit is to be discarded, dispose of it as normal office waste.

Important:
- Do not expose the imaging unit to light for more than 45 seconds, or irreversible damage may result.

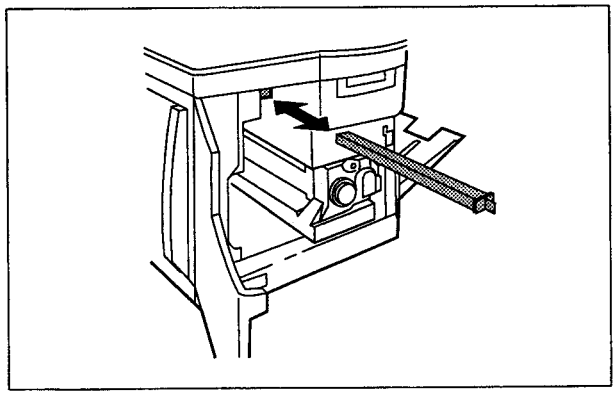


4. Remove the new imaging unit from the packaging, but leave the protective plastic sheet on the imaging unit immediately before installing it.
   - The imaging unit is extremely light-sensitive.

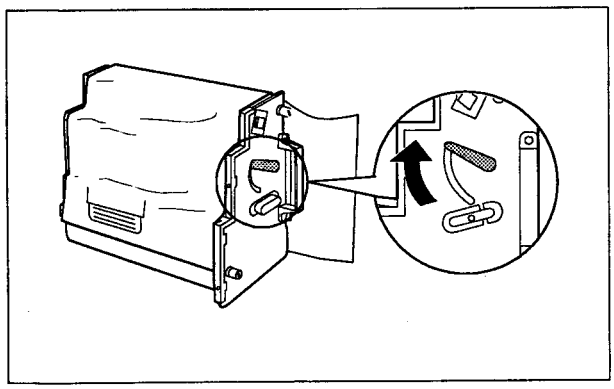


Note:
- Save all packing material for shipping purposes.

5. ❶ Remove the used filter by pulling it forward. Dispose of the filter as normal office waste.
❷ Insert the new filter.

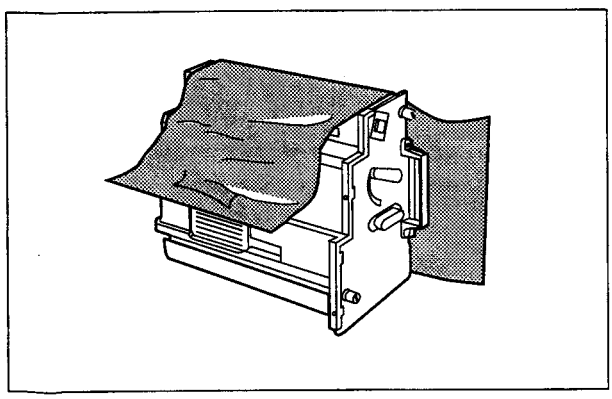


6. Turn the upper green lever clockwise until it stops.

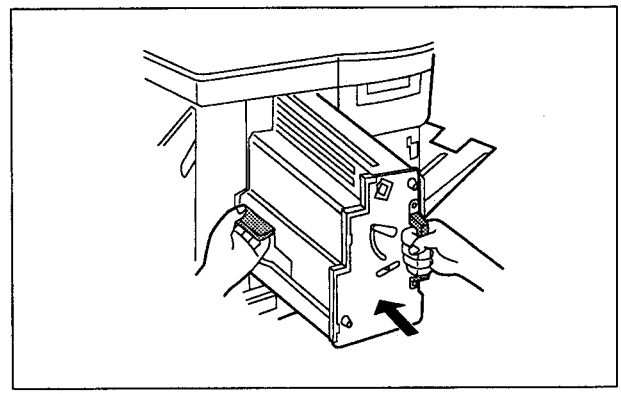


7. Remove the protective plastic sheet.

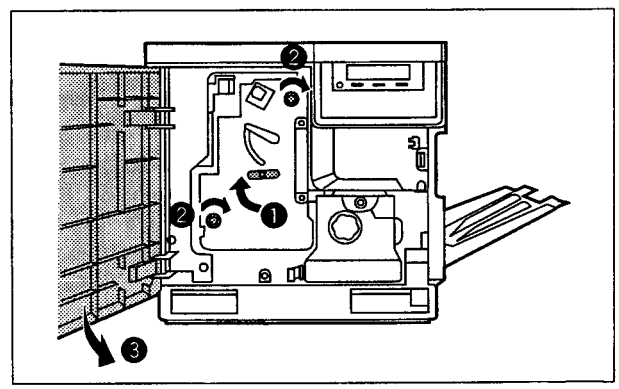
Important:
- Do not touch the green surface. Fingerprints may affect the print quality.
- Do not expose the imaging unit to light for more than 45 seconds, or irreversible damage may result.



8. Grasp the green handles and install the new unit into the printer. Release the left handle and push the unit in until it stops.



9. ❶ Turn the lower green lever clockwise 180° to lock the imaging unit.
❷ Tighten the two green thumbscrews by turning them clockwise.
❸ Close the front door.



2.6 Repacking

Prepare the unit before shipping.

Note: It is highly recommended that users keep the original carton and ALL packing materials. Please follow these instructions when moving the printer.

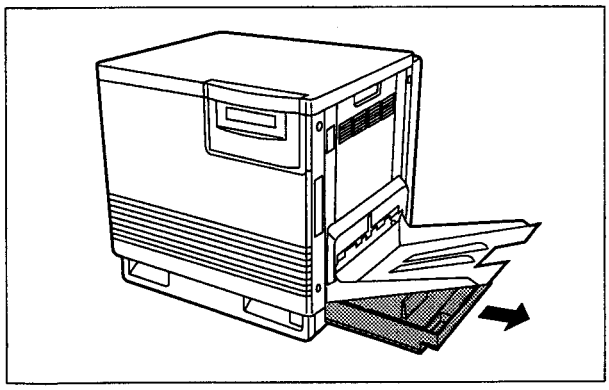
- Please use the original carton and all of the original packing material.
- Improper repacking of the printer may result in a service charge to repair the unit or a cleaning charge to remove spilled toner.
- Since the printer uses dry toner, extreme care must be taken when handling. The printer should be handled in the upright (vertical) position.

Material Required

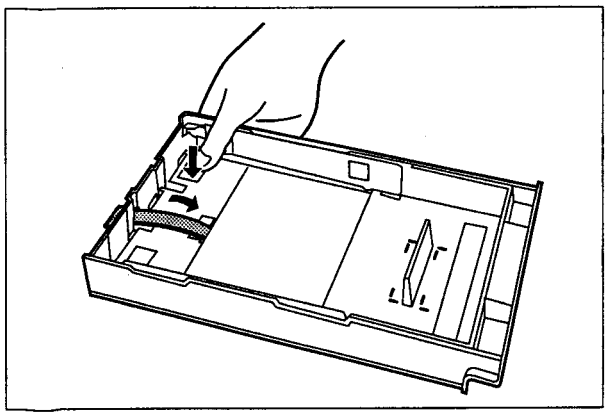
- Original Printer, Accessory Cartons, and All Packing Materials
- Newspaper or drop cloth
- Shipping Tape and Scissors

1. Turn off the printer; remove the power cord and all interface cables.

2. Remove the media tray(s) from the printer; remove the media from the tray(s).



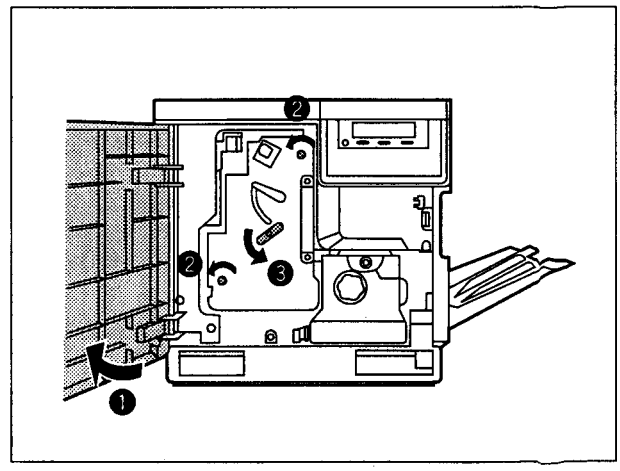
3. Press down on a media tray's metal plate. Place the cardboard packing material into the media tray.



4. Reinsert the media tray into the printer; use adhesive tape to secure the tray to the printer.

5. If the other media trays are installed, repack them for shipping or storage in their original shipping boxes.

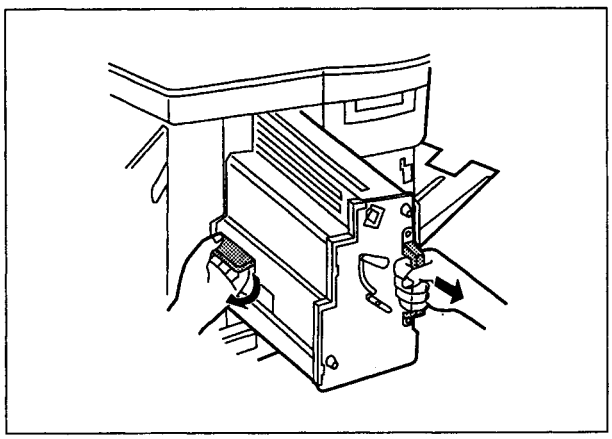
6. ❶ Open the printer's front door.
   ❷ Loosen the two thumbscrews by turning them counterclockwise.
   ❸ Turn the lower green lever 180° counterclockwise.



7. ❶ Grasping the front green handle, slide the unit out until it catches.
   ❷ Lift up the green handle on the left. Pull the imaging unit out of the printer.

Caution:

•The imaging unit weighs approximately 6.5 kg (14.3 lbs.). Always use the handles when lifting it.

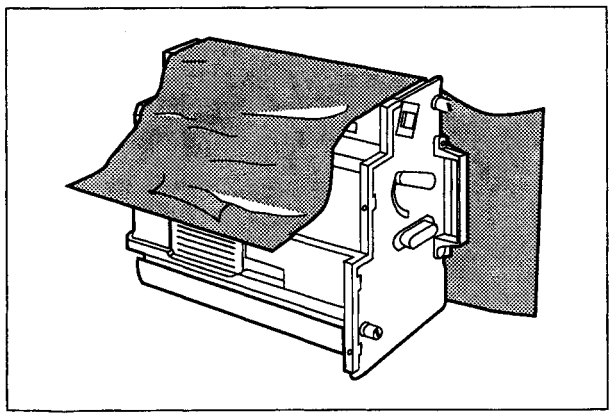


8. Wrap the imaging unit with a protective black plastic sheet.

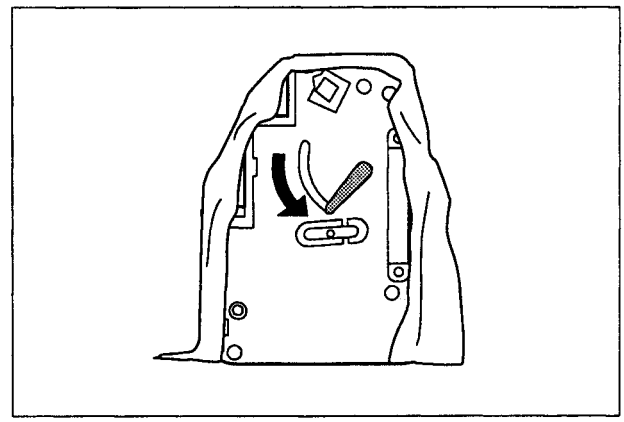
Important:

•Do not touch the green surface. Fingerprints may affect print quality.

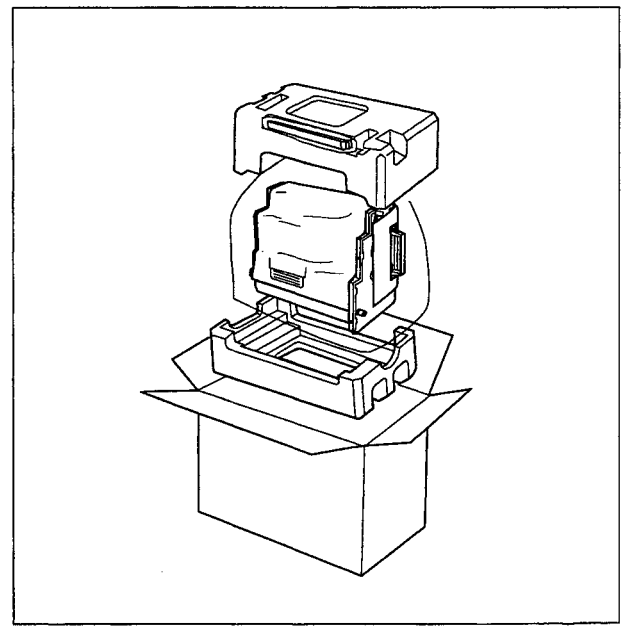
• Do not expose the imaging unit to light for more than 45 seconds, or irreversible damage may result.



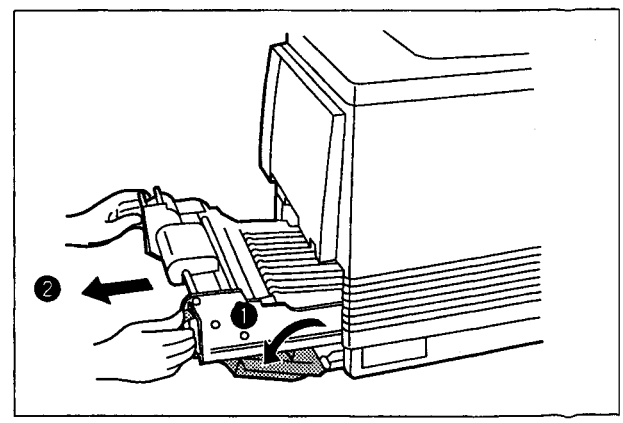
9. Move the upper lever 90° counterclockwise; this is necessary to protect the imaging unit during shipment.



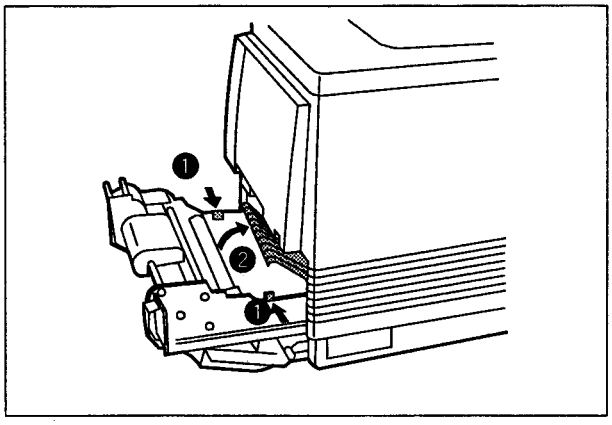
10. Insert the imaging unit into the packaging.



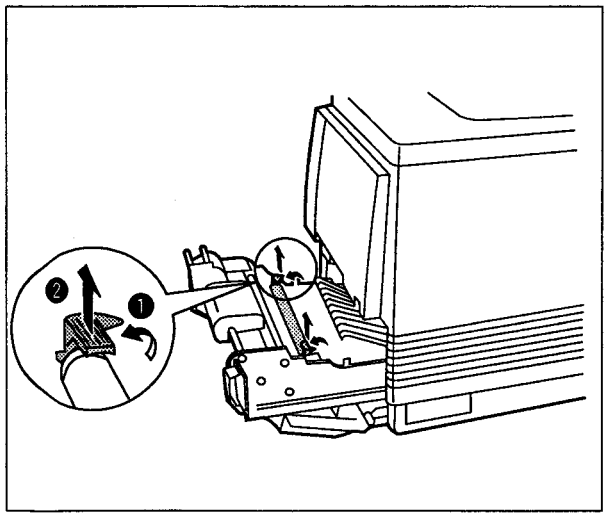
11. ❶ Open the left side door.
    ❷ Using the green handles, slide the paper feeder out.



12. ❶ Push in on green tabs to unlock the cover.
❷ Raise the cover until it catches in the open position.

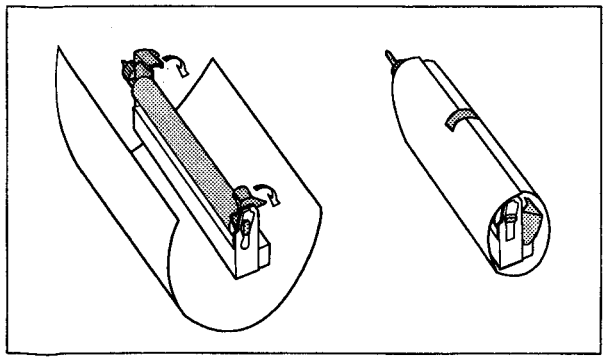


13. ❶ Rotate the transfer roller's green handles up.
❷ Lift out the transfer roller/waste bin.

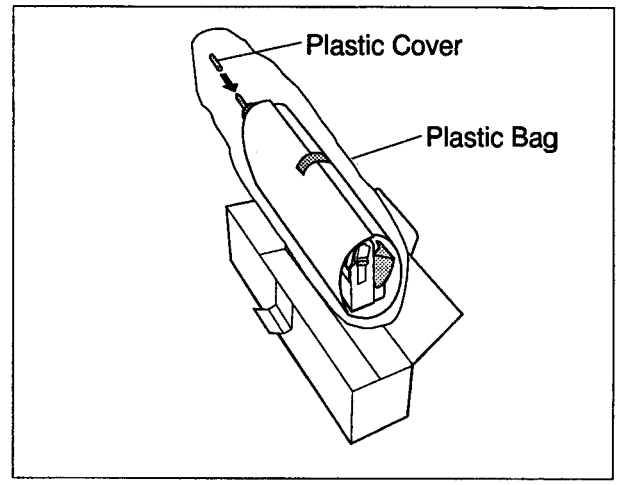


14. Rotate the handles down and wrap the transfer unit with a piece of paper and adhesive tape.

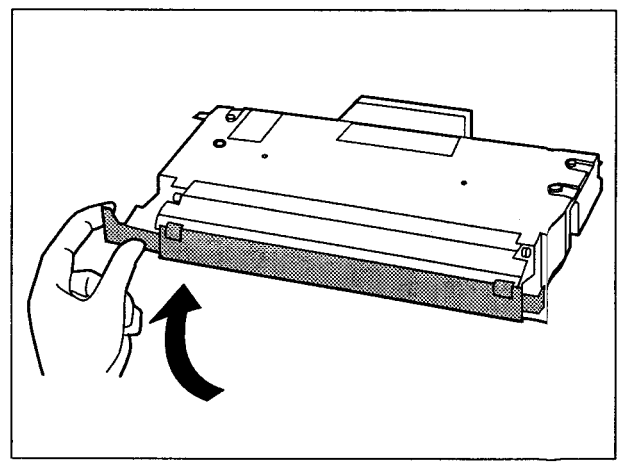
Note:
•Do not touch or bump the roller; it can damage the roller.



15. Install the plastic cover and insert the transfer unit into a plastic bag and seal the end tightly. Install the transfer unit into the packaging.



16. Remove the four toner cartridges; install the protective cover for each cartridge; repack them for shipping or storage in their original shipping boxes.

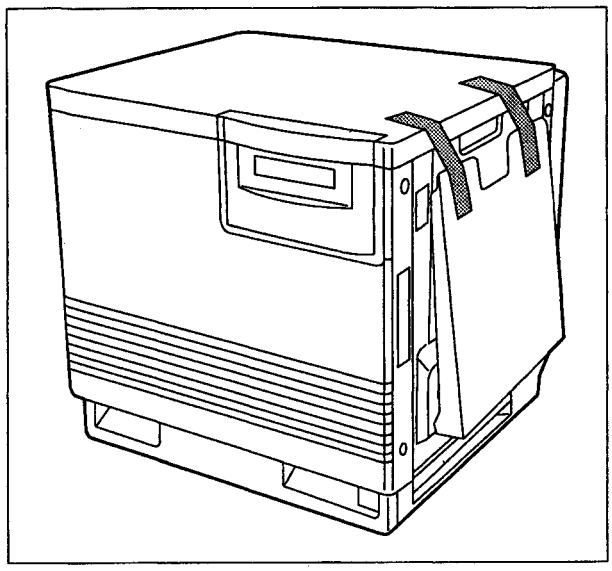


17. Wipe off any loose toner in and around the printer.

Note:
• If a toner vacuum is available, it is the best tool for cleaning spilled toner. Do not use a standard office vacuum; the toner will not be retained by typical vacuum dust collectors.

18. Close all printer doors and secure them with adhesive tape.

19. Raise the output tray and secure it to the printer with adhesive tape.



If a 2nd Cassette Feeder is not installed, go to Step 21.

20. If a 2nd Cassette Feeder is installed:

a. Lift the printer up and away from the 2nd Cassette Feeder.

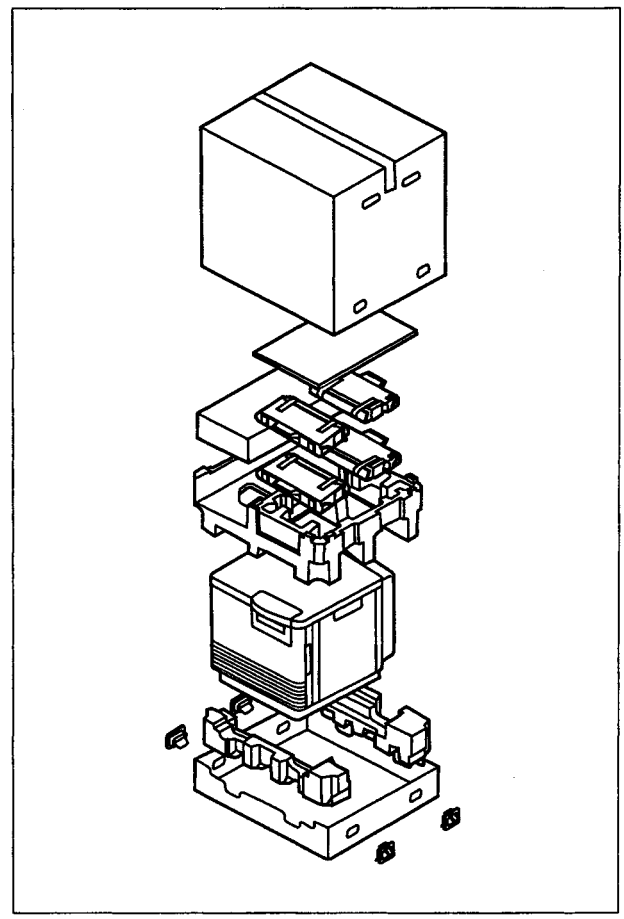
Safety Caution:

- The printer weighs approximately 41.4 kg. (91.2lbs.) and the 2nd Cassette Feeder weighs 14.3 kg (31.5 lbs.). Observe standard precautions for lifting heavy objects.

b. Repack the 2nd Cassette Feeder in its original shipping box.

21. Repack any other accessories in the original shipping box.

22. Repack the printer in the original shipping box. Make sure that the printer is upright and level when moving.



3. Operation

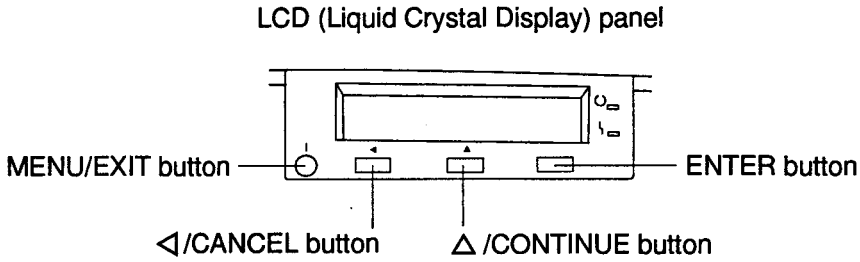
3.1 Menu Mode

This section covers the basic operation of this model.

1. Plug in the power cord and connect an interface cable to the laser printer.
2. Turn on the power switch. The LCD displays "Initializing", then "Ready".
3. Press the MENU/EXIT button to enter the Menu mode.

The following chart shows all functions of MENU that are displayed when selecting functions.

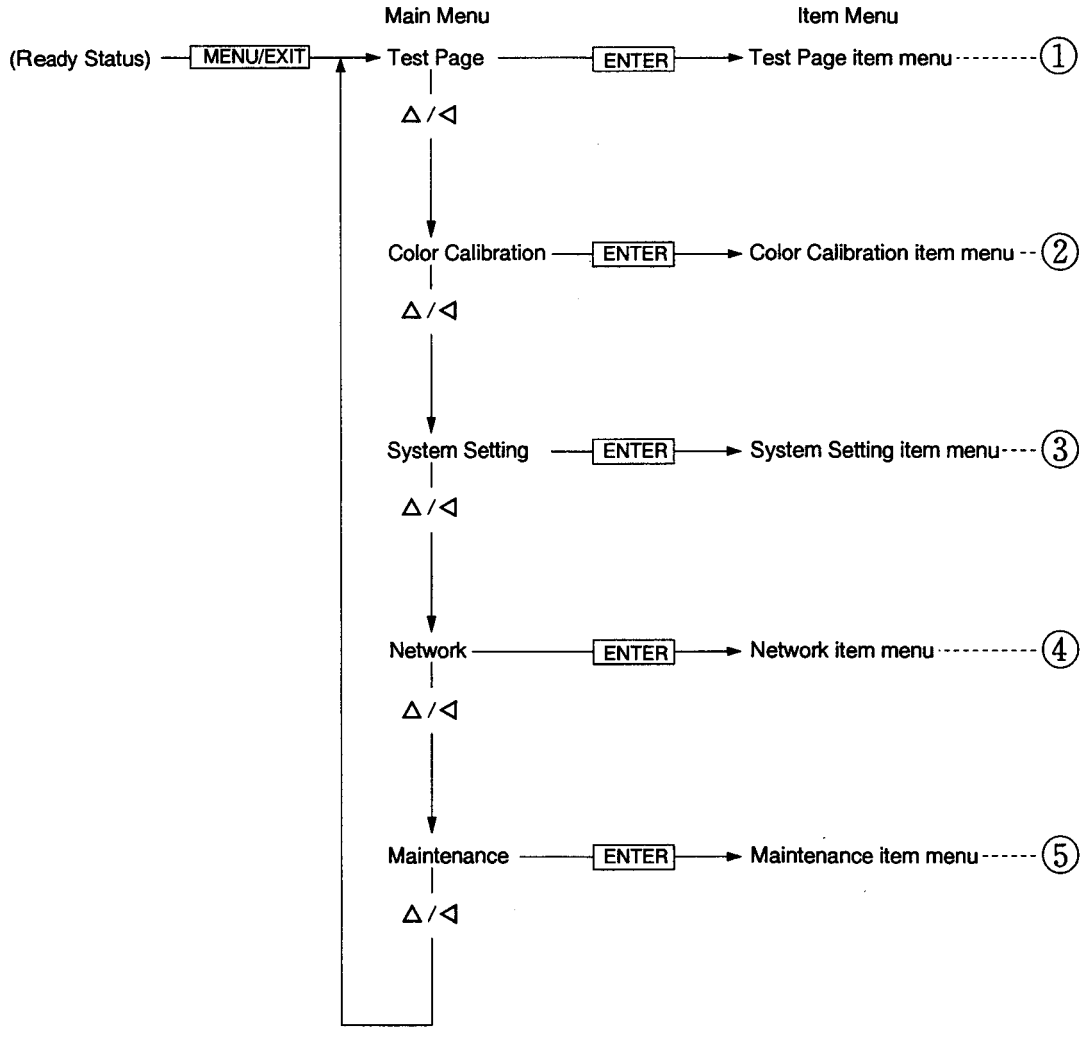
Printer Panel



3.1.1 Main Menu

[ENTER] : Press the ENTER button.

[△/◁] : Press the △ or ◁ button.



3.1.2 Item Menu

[MENU/EXIT] : Press the MENU/EXIT button.

3.2 Service Mode

The Service Mode is entered by turning on the power while pressing the ENTER button and △ button. The service mode is accessible when the Energy Star mode is off. After warm up, "Service Mode" is displayed in the LCD. This service mode is canceled by turning off the printer.

MENU/EXIT: Press the MENU/EXIT button.
ENTER : Press the ENTER button.
△/◁ : Press the △ or ◁ button.

The printer has a two-line, 48 character LCD (2 x 24 characters). The menus in this Service Mode flowchart are displayed in the lower line.

3.2.2 Calibration

Calibration mode is used to adjust print position, primarily when the laser unit or engine board is replaced. (See section 7.1.)

(a) Top Calibration
Select "Top Calibration" and press the ENTER button. Use △ or ◁ button to change the data. This setting moves the print area in "dot row" increments of 1 dot row. Increments of 0~120 dot rows are acceptable.

(b) Left Calibration
Select "Left Calibration" and press the ENTER button. Use △ or ◁ button to change the data. This setting moves the print area to the right (away from the left margin) in "dot column" increments of 1 dot column. Increments of 0~40 dot columns are acceptable.

3.2.3 Display Information

(a) Display Counter

Section menu	Description
Imaging Unit	A count of the total number of images fed since the Imaging Unit was last replaced.
Transfer Unit	A count of the total number of pages fed since the Transfer Unit was last replaced.
Fuser Unit	A count of the total number of pages fed since the Fuser Unit was last replaced.
Oil Roll	A count of the total number of pages fed since the Oil Supply Roll was last replaced.
MPT Cork Pad	A count of the total number of pages fed manually.
Total Page	A count of the total number of pages fed since the product is shipped.

(b) Display Version

Section menu	Description
ECU ROM Version	Engine ROM Version (in decimal numeration).
Cont. ROM Version	Controller ROM Version.

(c) Display Fuser Temp
This menu displays the Fuser Unit temperature.

(d) Display Humidity
This menu displays the humidity.

e) Display Ambient Temp
This menu displays the ambient temperature.

(f) Display Tray Status
This menu displays the paper size loaded in the cassettes. When a cassette is not installed, "No Tray" is displayed.

Section menu	Description
Standard Tray	Media tray
Opt 1 Tray	Upper cassette inserted in the optional 2nd Cassette Feeder.
Opt 2 Tray	Lower cassette inserted in the optional 2nd Cassette Feeder.

3.2.4 Controller Test

(a) LCD Test
This menu is used to check the LCD. Select "LCD Test" and press the ENTER button. Confirm that the LCD messages/patterns shown in the following table are displayed.

Step No.	Button	LCD Message / Pattern
1	ENTER	LCD Test

Used to check motors and fans.

(d) Miscellaneous Components
Used to check clutches and solenoids.

3.2.6 Other Menu

(a) Clean Accumulator Belt
Used to clean the accumulator.

4. Mechanical Function

4.1 Drive Mechanism/Image Process General Description

Drive Mechanism

Eight DC servomotors are used to transmit drive to each mechanical block within the engine. The main motor transmits drive to the imaging unit. The paper feed motor transmits drive to the paper feed unit, fuser unit and toner cartridge selector/paper eject unit. The toner cartridge motor transmits drive to the toner cartridges. Four cam motors in the toner cartridge selector/paper eject unit move the toner cartridge to their development position. The M.P.T paper feed motor is a stepping motor located in the paper feed unit and feeds the paper in the multi-purpose tray.
The paper feed unit, laser scanning unit, toner cartridges, fuser unit and toner cartridge selector/paper eject unit are designed for easy removal from the printer for easy maintenance.

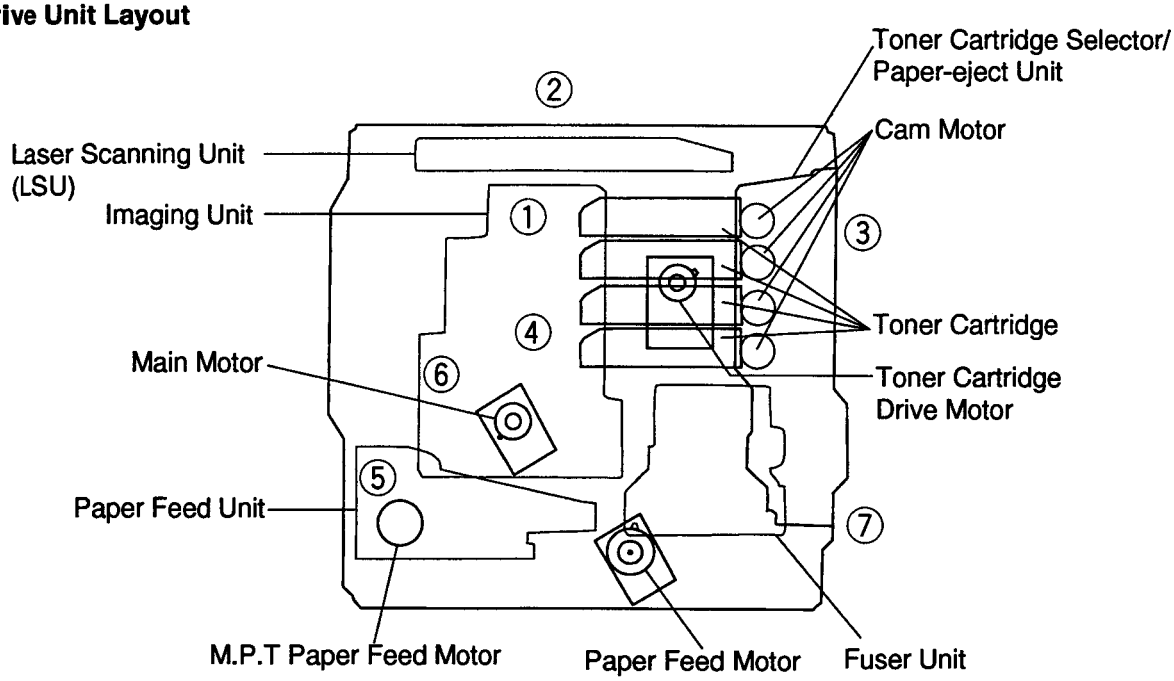
Print Process

The laser printer creates an image on paper using a technique called laser electrophotography. The printer uses the electrographic process known as Discharged Area Development, or "write black". In this process, a digitally modulated laser scans laterally across a rotating OPC belt that has been negatively charged. Wherever the belt is exposed by the laser beam, the image is written and toner is transferred.

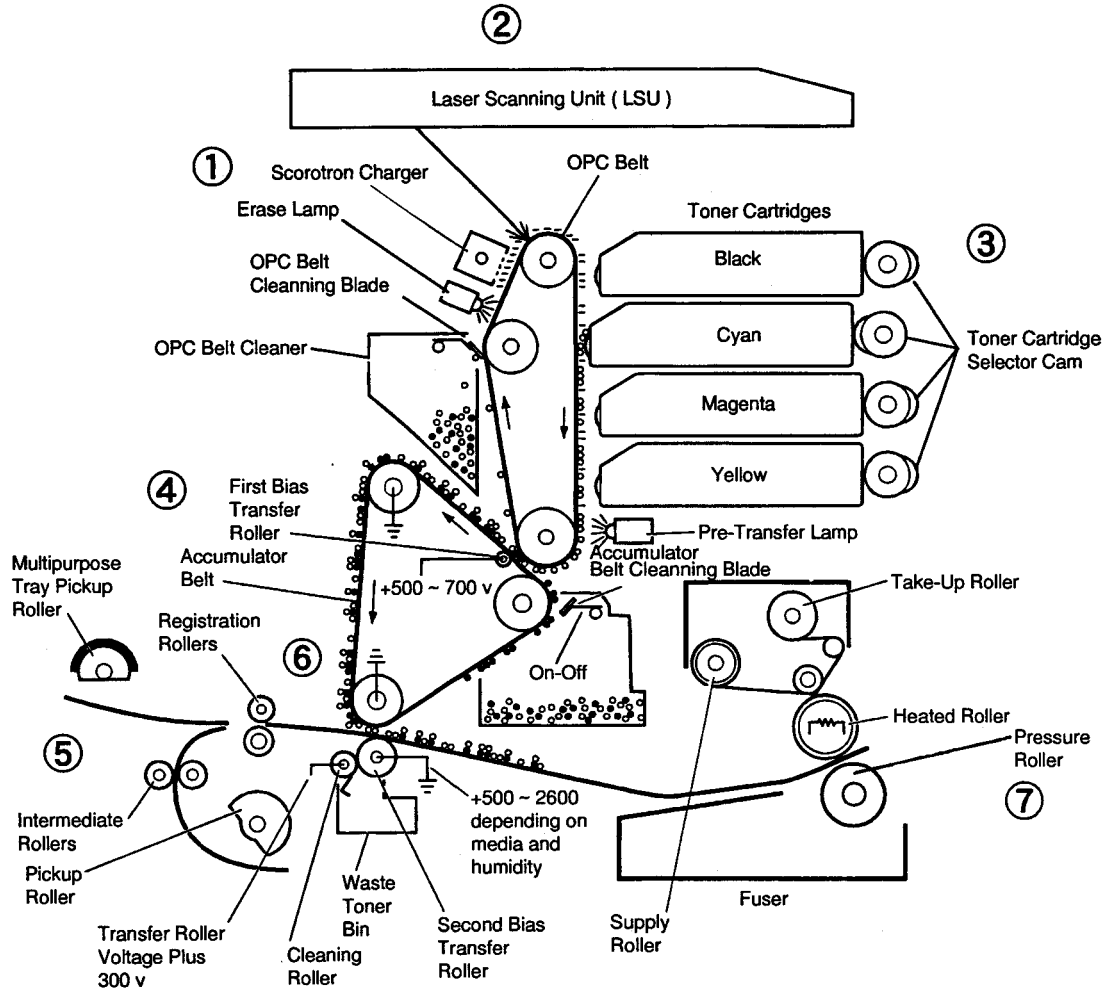
To generate a color image, the OPC belt must complete four rotations, one for each primary color and black. During each successive pass, the laser exposes the portions of belt that correspond to the primary color's component of the image. Toner is attracted to the laser-exposed portions of the belt.
As each color layer is developed on the OPC belt, they are transferred to the accumulator belt until all four color layers eventually reside one on top of the other on the accumulator belt. At this point, a sheet of paper is advanced under the accumulator belt and the toner is transferred to the sheet of paper. The paper advances to the fuser, where heat and pressure permanently bond the toner to the paper. From the fuser, the paper is driven to the output tray.

A cleaning blade scrapes residual toner from the OPC belt before the next primary color toner is applied to the belt. This prevents contamination of the next color layer. The cleaning blade is in constant contact with the belt. An accumulator belt cleaner scapes residual toner from the accumulator belt. This prevents "ghosting" of the next print. The blade only comes in contact with the belt after the accumulated toner layers are transferred to the sheet of paper.

Drive Unit Layout



Print Process



Each block is explained in the following sections.

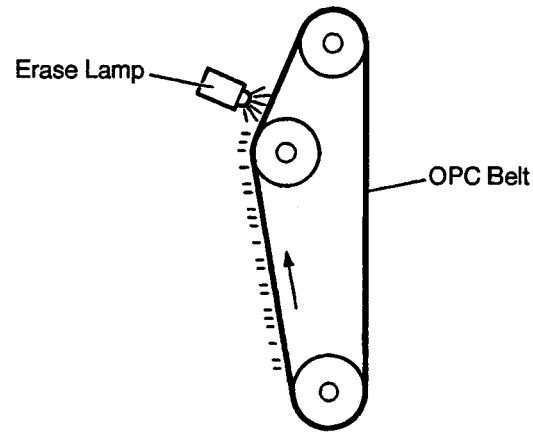
① 4.2.1 Discharge and Charging
② 4.2.2 Laser Exposure and Scanning
③ 4.2.3 Developing
④ 4.2.4 Toner Transfer to the Accumulator Belt
⑤ 4.2.5 Paper Pickup
⑥ 4.2.6 Toner Transfer to Paper
⑦ 4.2.7 Fusing and Exiting

4.2 Print Process

4.2.1 Discharging and Charging

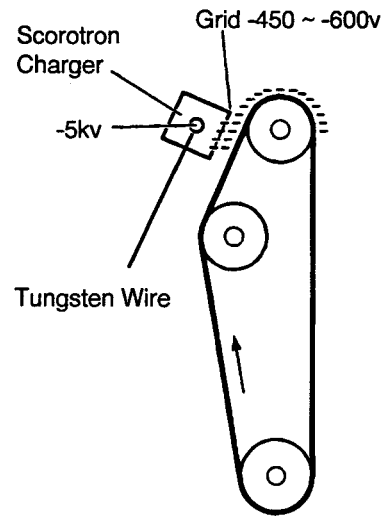
Discharge

The print process begins when the OPC belt passes by the erase lamp. The belt is rotating at 96 mm-per-second for 600 dpi printing or 48 mm-per-second for 1200 dpi printing. The light of the erase lamp, which is a horizontal row of red LEDs, removes random negative charges from the OPC belt. Before pre-exposure, the surface of the belt varies from -500 volts to +50 volts. After pre-exposure, the surface of the belts is 0 to -20 volts. The pre-erase lamp is called the erase lamp since it "erases" negative charges from the belt.



Charge

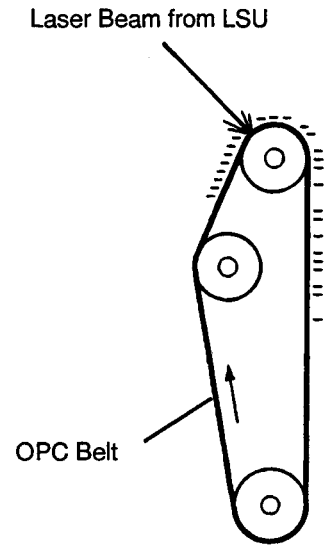
The electrostatic potential of the belt is not uniform following discharging. As the belt rotates, it passes a scorotron charger, which bombards the belt with negative charges. The scorotron charger behaves somewhat like a vacuum tube. The grid of the charger, held at a potential of between -450 volts to -600 volts and coupled with the varying voltage potential on any discrete point on the belt's surface, determines how many electrons can flow from the corona wire onto that point of the belt's surface. The corona wire is charged to -5 kilovolts with a constant current of -400μA. The varying electron output from the scorotron, directly based on the varying charge of the belt surface, ensures a uniform negative potential of -440 volts or -590 volts on the belt surface, depending on the selected dot-per-inch printing and ambient temperature.



4.2.2 Laser Exposure and Scanning

Laser Exposure

As the OPC belt rotates, the uniformly charged belt is exposed by the modulated laser beam. The vertically-moving belt passes in front of the horizontally scanning laser beam, and negative charges on the belt surface are neutralized by the beam. This forms a latent image.

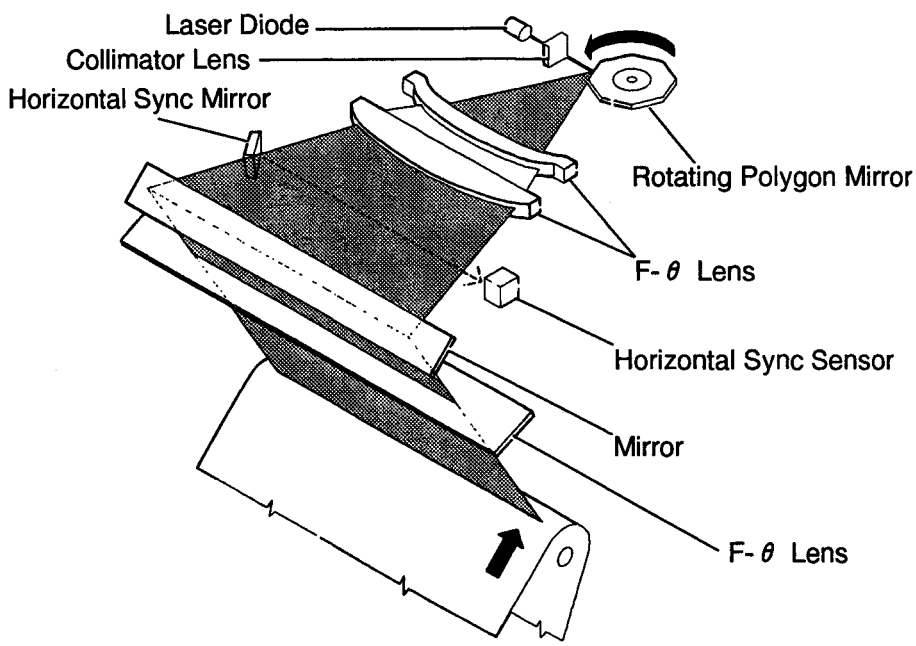


Laser output power is either 0.4 mW or 0.5 mW, depending on whether the printer is printing in 1200 dots per inch (dpi) mode or 600 dpi mode. The following table shows the laser exposure, the negative potential on the OPC belt.

	Laser output power	unexposed	fully exposed
1200 dpi	0.4 mW	-440 volts	-10 volts
600 dpi	0.5 mW	-590 volts	-20 volts

Laser Scanning

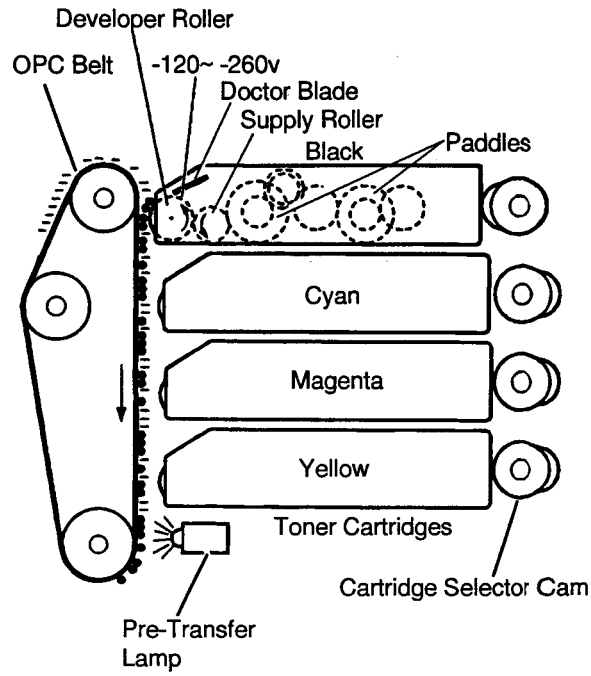
A laser diode generates the laser beam, and lenses and mirrors in the laser scanner direct the beam at the photoconductive belt. The beam is made parallel by the collimator lens and is directed at the rotating polygonal mirror. The mirror rotates at a constant 22,677 revolutions per minute. This transforms the beam into a horizontally scanning beam, which is directed through the f-θ primary lens, altering the beam's angular rotation motion into a constant horizontal motion. The toric correction lens corrects the beam for any vertical misregistration. Next, the beam reflects off of a mirror and passes through a window where it scans across the rotating photoconductive belt. At the beginning of each horizontal sweep, the horizontal sync mirror deflects the laser beam to the horizontal sync sensor. This informs the engine control board that the laser beam is beginning its horizontal sweep and that it can begin to modulate the signal with the data to be printed on that line of the image.



4.2.3 Developing

Developing

As the OPC belt continues to rotate, it passes by the four toner cartridges. Each cartridge is selectively cam-driven forward to bring its developer roller into direct contact with the belt at the appropriate time.
The currently activated toner cartridge's developer roller is charged to a potential between -120 to -260 volts. Toner is attracted to the exposed portions of the belt in reverse proportion to the negative charge. The greatest amount of toner is transferred to the most positive potential. The developer roller rotates at 1.6 (600 dpi printing) or 2.13 (1200 dpi printing) times the speed of the OPC belt to ensure a constant supply of toner.
As the belt advances, it passes the pre-transfer lamp, which, like the discharge lamp, removes remaining negative charges from the unexposed portions of the belt.

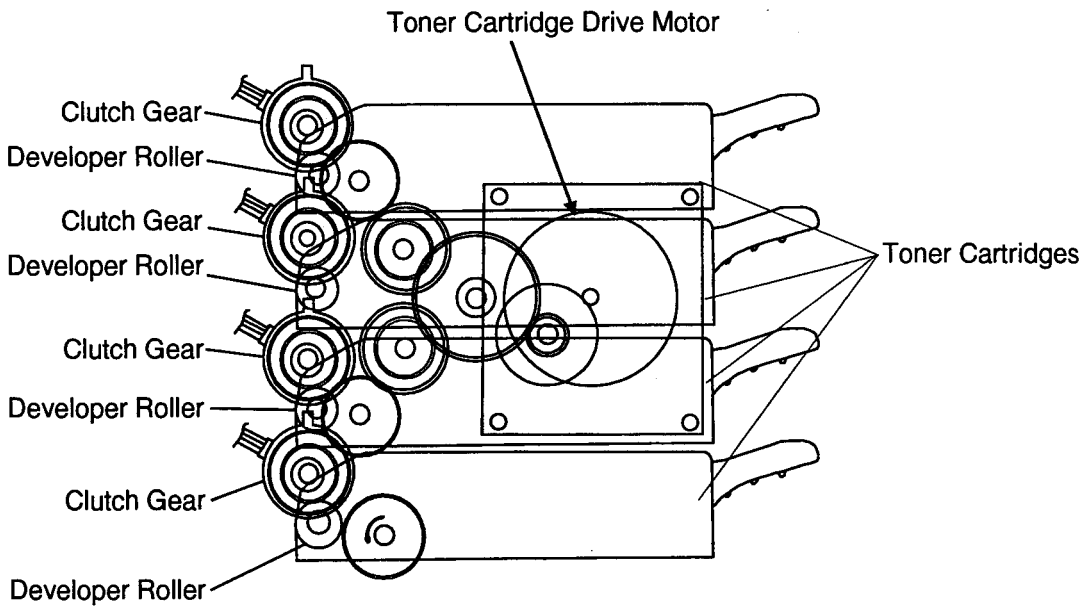


Inside each toner cartridge is a toner supply roller that rotates in the opposite direction from the developer roller. This supplies a layer of toner onto the developer roller. The doctor blade smooths and evenly distributes the toner on the developer roller. Gear-driven paddles churn the toner and keep it fluidized and moving towards the developer roller.

Toner Cartridge Drive

Drive is supplied from the toner cartridge drive motor. At the proper time, the clutch corresponding with the currently selected toner cartridge is activated by a signal from the CPU, transmitting drive to the clutch gear via idle gears. Drive is then transmitted to the developer rollers.

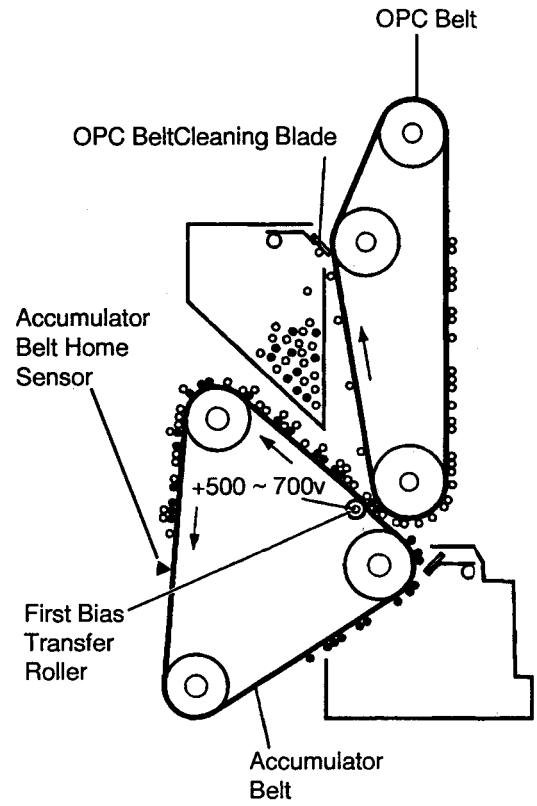
The toner level sensing receiver board detects whether each of the four toner cartridges contains sufficient toner. This board is paired with the toner level sensing transmitter board and functions as the photo sensors.



4.2.4 Toner Transfer to the Accumulator Belt

As the OPC belt rotates, it comes in contact with the accumulator belt, which is rotating at the same speed. Located under the accumulator belt at the contact point with the OPC belt, the first bias transfer roller carries a charge that varies between +500 and +700 volts (based on the sensed temperature, humidity and print speed). This strong potential attracts and holds the toner from the OPC belt to the accumulator belt. The accumulator belt makes four complete rotations, one for each of the four toner layers. The accumulator belt home-position sensor sync signal, generated from a timing mark on the accumulator belt, informs the engine control board when to begin exposing the OPC belt with information to build the next toner layer. At that time, the accumulator belt is rotated to the proper position to transfer the toner layer in proper registration with the previous layer(s).

Any toner remaining on the OPC belt after the transfer to the accumulator belt is scraped off by the OPC belt cleaning blade, which is always in contact with the belt. This leaves the OPC belt clean for the next layer of toner to be transferred from the toner cartridges.

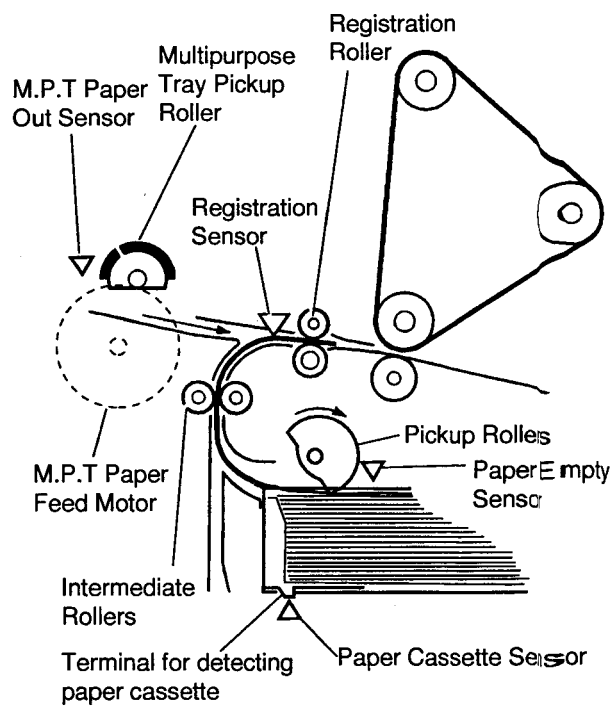


4.2.5 Paper Pickup

The cam-shaped pickup rollers are driven by the paper-feed motor and force a sheet of paper between the intermediate rollers. The pickup roller completes only one rotation to pick a sheet of media. This will push the sheet of paper to the intermediate rollers but does not pick a second sheet. Alternately, depending on the user's selection, media may be picked from the multi-purpose tray. The multi-purpose tray pickup roller is driven by the M.P.T paper feed motor and feeds a sheet of media or an envelope into the registration rollers.

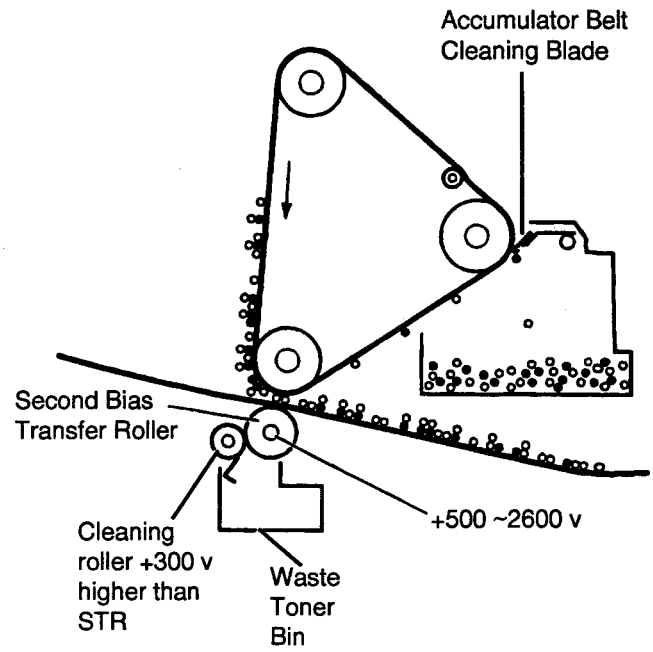
The intermediate rollers advance the sheet of paper to the registration rollers. The paper is driven lightly against the stationary registration rollers to create a slight buckle in the paper, aligning the sheet of paper. At this point, the paper remains stationary (since the registration roller's clutch is not yet energized) until the image is ready to be printed on the paper. The registration sensor detects whether the sheet of paper arrived at the aligning rollers after being properly picked and traveling through the intermediate rollers.

The paper feed unit has the M.P.T paper out sensor, paper empty sensor and paper cassette sensor. The M.P.T paper out sensor detects whether the paper is set on the manual feed tray. The paper empty sensor detects whether the paper is set in the paper cassette. The paper cassette sensor detects paper cassette presence and paper size.



4.2.6 Toner Transfer to Paper

Once all four layers of toner reside up on the accumulator belt, the registration roller clutch is energized to advance a sheet of paper (which has already been picked) to the second bias transfer roller. The toner image on the rotating accumulator and the paper that is being fed into the image unit are synchronized for proper alignment. The leading edge of the toner image on the accumulator belt is aligned 5 mm from the leading edge of the paper. A strong positive voltage in the second bias transfer roller attracts the toner from the accumulator belt to the paper. The transfer roller voltage varies from +500 to +2600 volts based on the ambient temperature, humidity, print speed and media being printed upon. The paper (or transparency film) advances at the same speed as the accumulator belt.

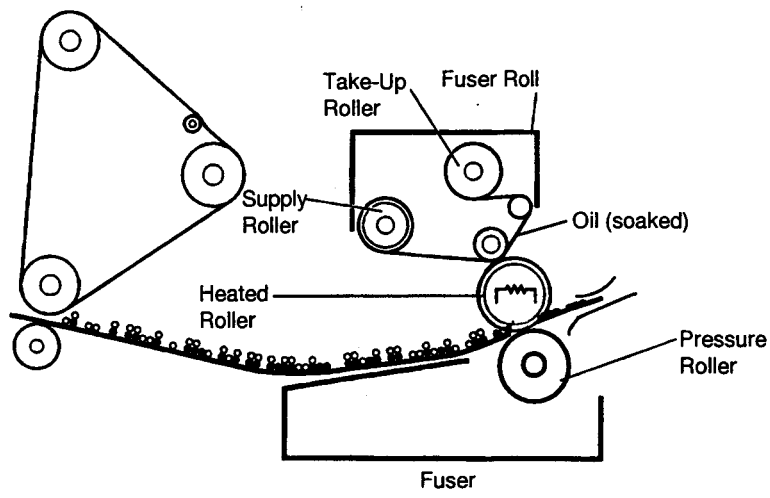


As the toner is being transferred to the paper, the accumulator belt cleaning blade is activated. This blade scrapes any remaining traces of toner from the accumulator belt prior to the next image transfer. Residual toner is removed from the second bias transfer roller by a cleaning roller that is held at a potential that is +300v higher than the second bias transfer roller. A blade scrapes the toner off the cleaning roller into the toner waste bin.

4.2.7 Fusing and Exiting

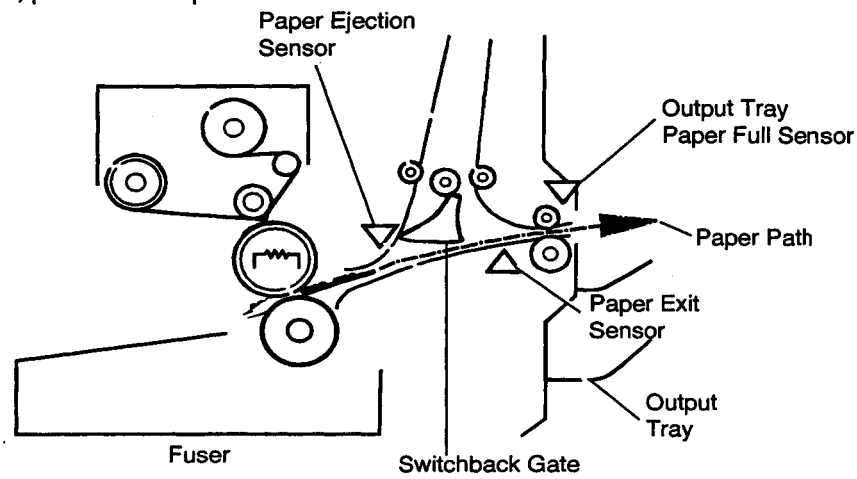
Fusing

After the toner image has been applied to the paper, it passes through the fuser. A heated roller melts the toner and pressure drives it into the paper. The melted toner bonds to the paper. An oil supply keeps the heated roller lubricated so that the melted toner does not adhere to the roller. After fusing, the paper advances to the output tray. When the printer is idle, the heated roller is held at a temperature of 160°C. The heated roller is set to 165°C for 600 dpi printing and 145°C for 1200 dpi printing. For transparency film and other media the fuser is set to 165°C and ran at half speed. The paper ejection sensor detects the sheet of paper as it leaves the fuser.

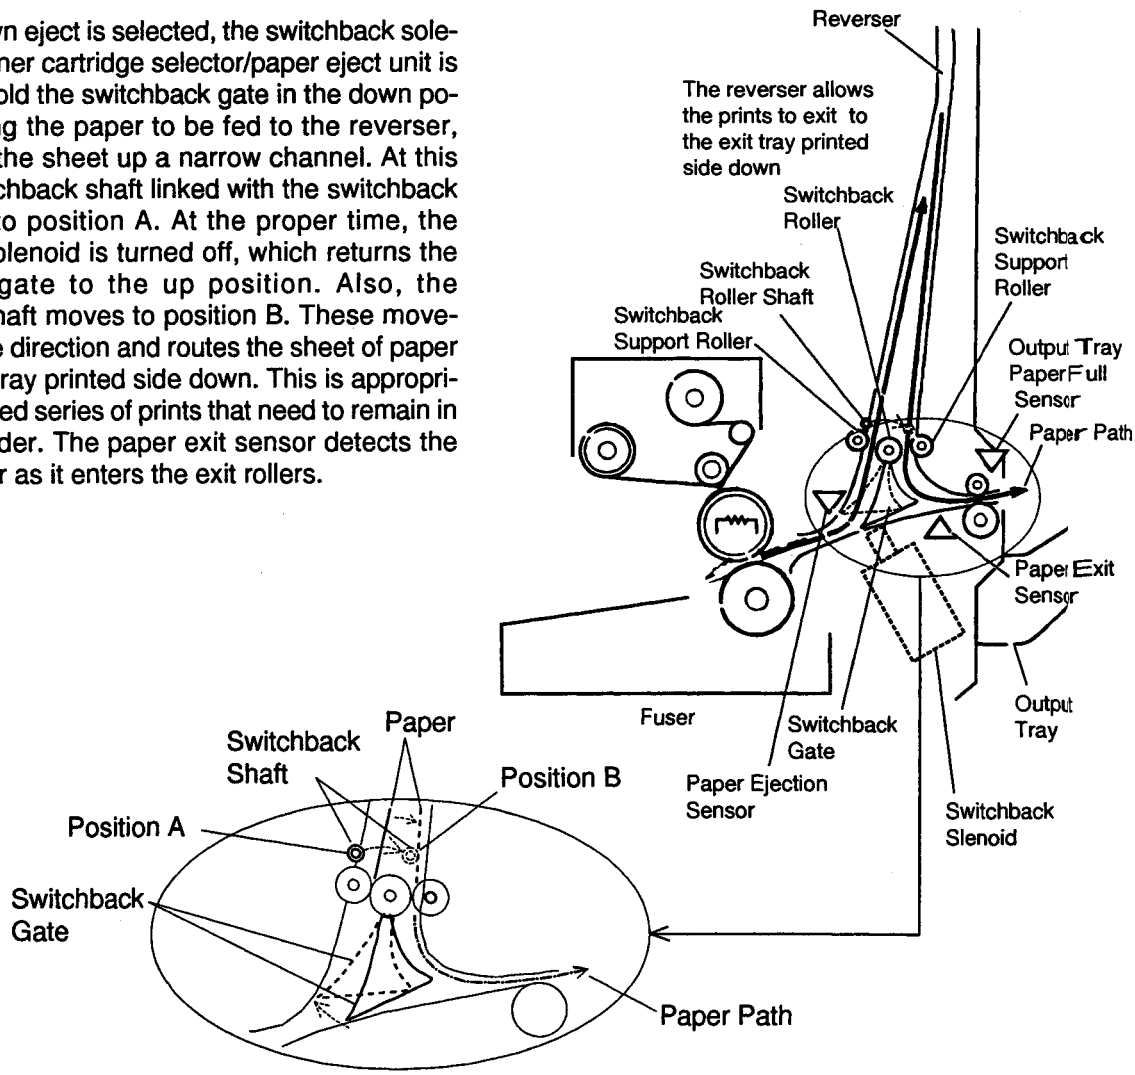


Eject

If face up eject is selected, the paper goes directly to the output tray under the switchback gate, printed side up.



Or, if face down eject is selected, the switchback solenoid on the toner cartridge selector/paper eject unit is activated to hold the switchback gate in the down position, allowing the paper to be fed to the reverser, which drives the sheet up a narrow channel. At this time, the switchback shaft linked with the switchback gate moves to position A. At the proper time, the switchback solenoid is turned off, which returns the switchback gate to the up position. Also, the switchback shaft moves to position B. These movements reverse direction and routes the sheet of paper to the output tray printed side down. This is appropriate for a collated series of prints that need to remain in first-to-last order. The paper exit sensor detects the sheet of paper as it enters the exit rollers.



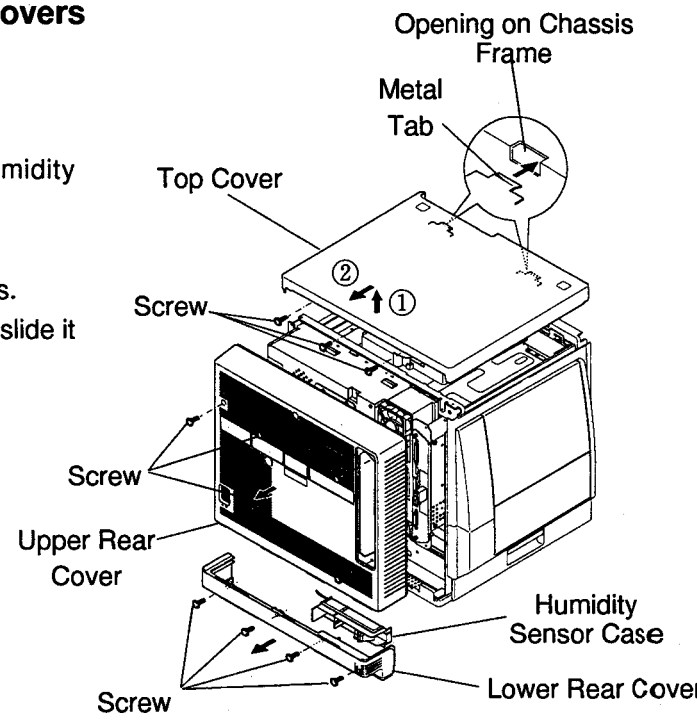
5. Removal and Replacement Procedures

Caution:

The imaging unit (OPC belt and accumulator belt) is extremely light sensitive. Make sure that it is not exposed to light for more than 45 seconds, or it may damage the unit. Never expose the imaging unit to direct sunlight. When servicing the printer, ensure that the imaging unit is not exposed to light. If necessary, remove it and store in a dark place.

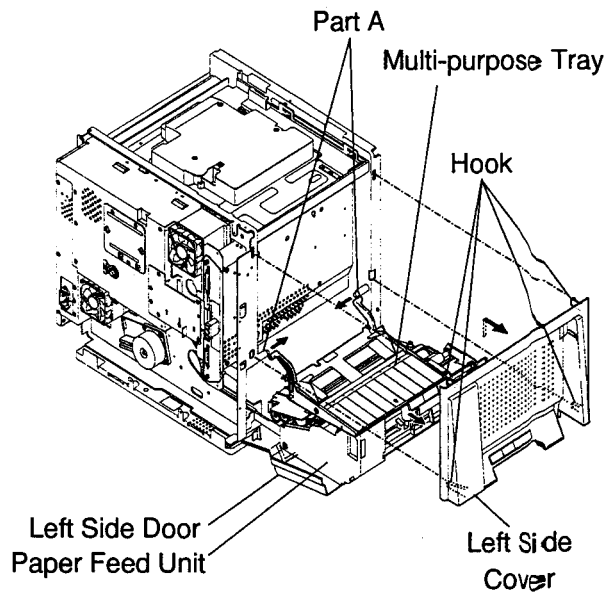
5.1 Upper Rear, Lower Rear and Top Covers

1. Remove the upper rear cover (4 screws).
2. Remove the lower rear cover (4 screws).
3. Separate the lower rear cover from the humidity sensor case.
4. Remove the top cover (3 screws).
   The front of the top cover is held by metal tabs.
   Tilt the top cover up from the rear (arrow ①), slide it back slightly (arrow ②), and remove it.

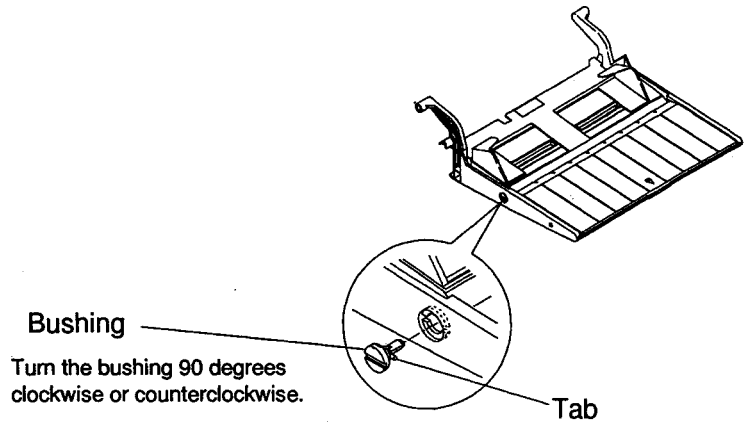


5.2 Left Side Cover and Multi-purpose Tray

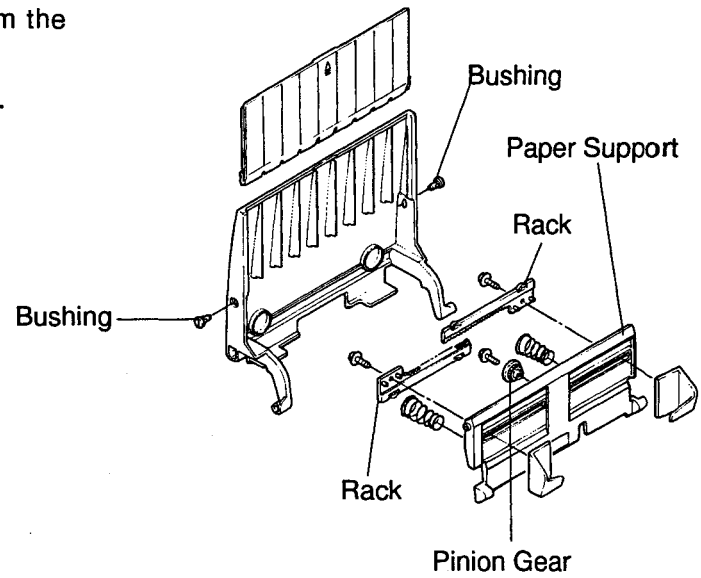
1. Remove the upper rear cover and top cover (see section 5.1).
2. Open the left side door.
3. Pull out the paper feed unit.
4. Lower the multi-purpose tray.
5. Remove the left side cover while releasing the 4 hooks from the printer frame.
6. Remove the multi-purpose tray by sliding part A in the direction indicated by the arrow.



7. Turn the bushing 90 degrees.
8. Remove the 2 bushings.

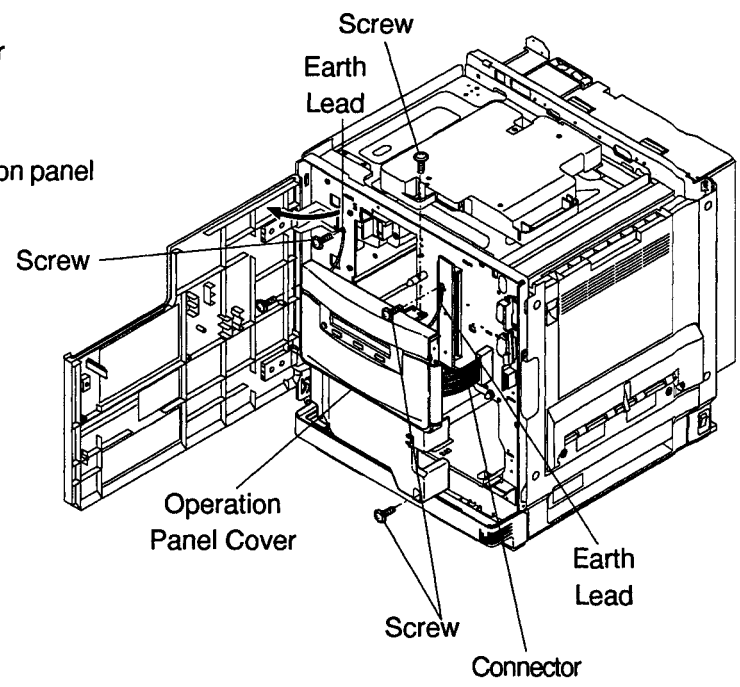


9. Separate the paper support assembly from the holder.
10. Remove the pinion gear and racks (3 screws).

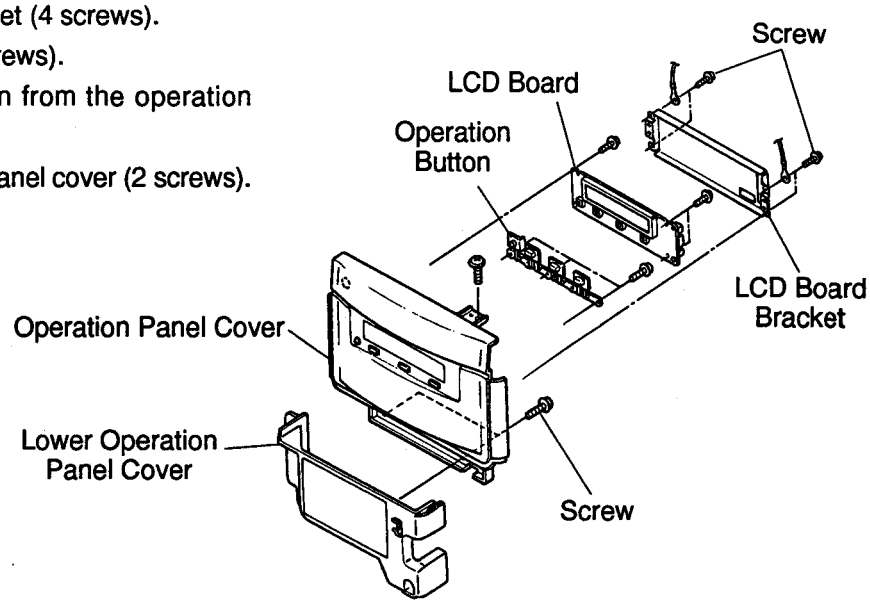


5.3 Operation Panel Cover and Printer LCD Board

1. Remove the upper rear cover and top cover (see section 5.1).
2. If the imaging unit is installed, remove it.
3. Open the front cover and remove the operation panel cover assembly (3 screws).
4. Remove the 2 earth lead wires (2 screws).
5. Disconnect the connector.

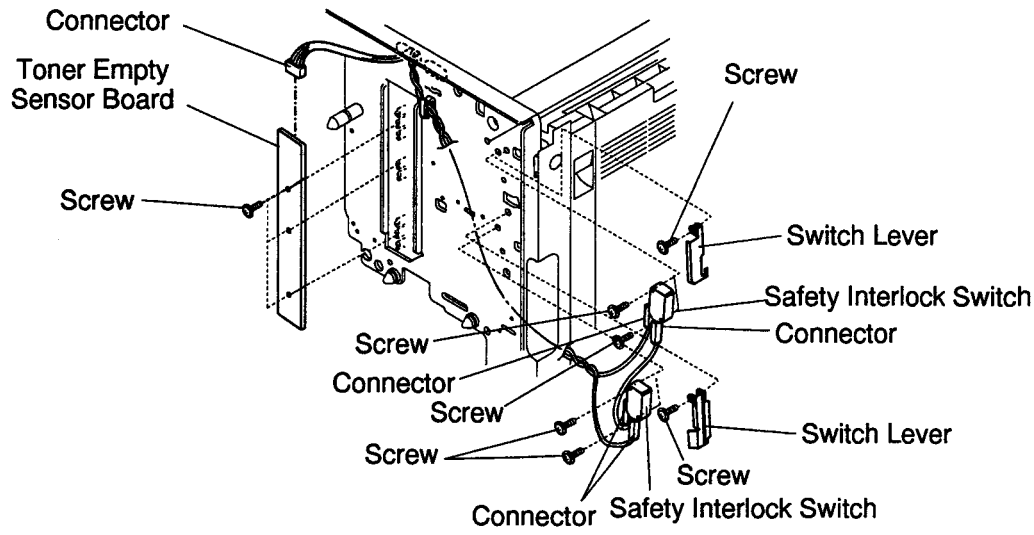


5. Remove the LCD board bracket (4 screws).
6. Remove the LCD board (4 screws).
7. Remove the operation button from the operation panel cover (3 screws).
8. Remove the lower operation panel cover (2 screws).



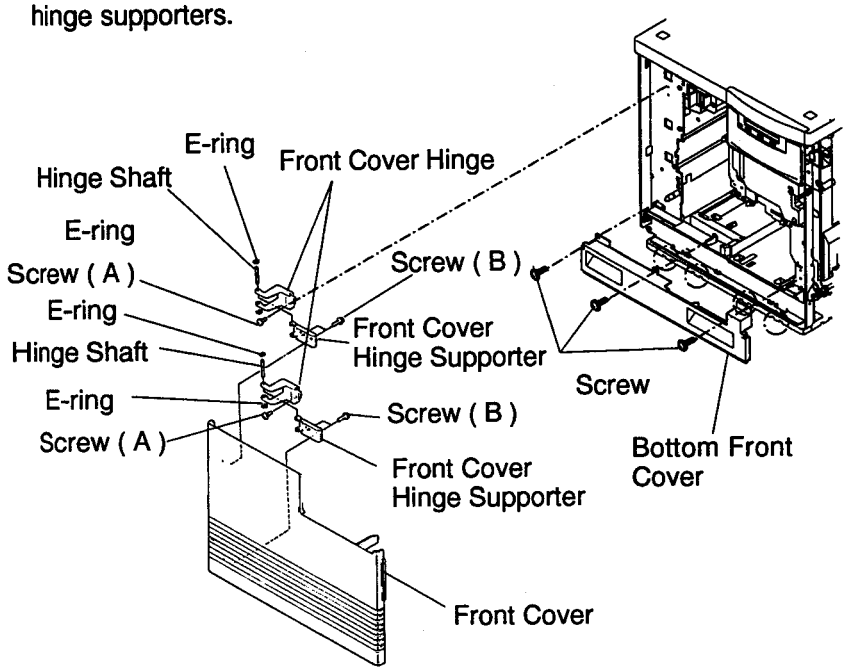
5.4 Safety Interlock Switches and Toner Empty Sensor Board (T)

1. Remove the upper rear cover, top cover and operation panel cover (see sections 5.1 and 5.3).
2. Remove the 3 screws and disconnect the connector on the toner empty sensor board.
3. Remove the toner empty sensor board.
4. Disconnect the 2 connectors from each of the 2 safety interlock switches.
5. Remove the 2 screws from each of the 2 safety interlock switches.
6. Remove the screw from each of the switch levers and switch lever.



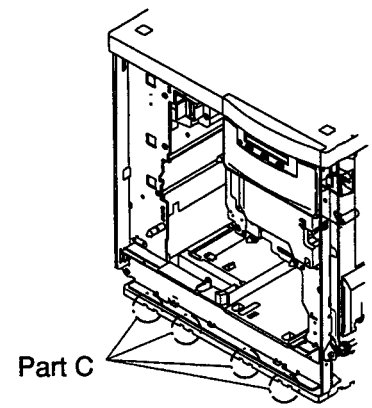
5.5 Front Cover and Bottom Front Cover

1. Open the front cover.
2. Remove the bottom front cover (3 screws).
3. Remove the front cover with hinges [4 screws (A)].
4. Remove the hinge assemblies from the front cover [4 screws (B)].
5. Remove the E-rings from the hinge shafts.
   The front cover hinges can now be separated from the front cover hinge supporters.



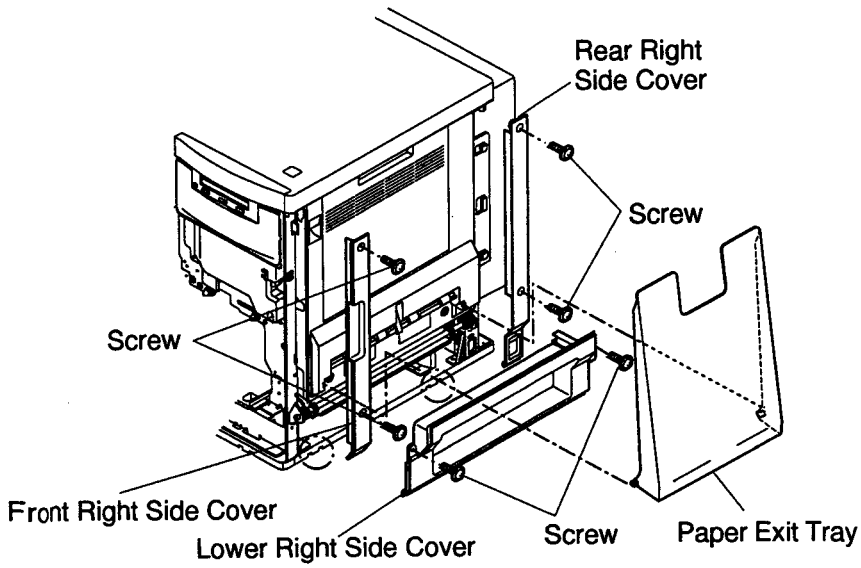
Note :

The bottom front cover is latched by metal tabs (Part C). When removing or reinstalling this cover, it must be released from the tabs or latched with the tabs.



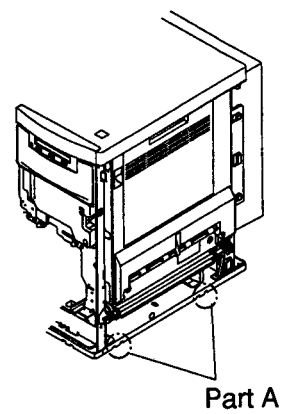
5.6 Front Right Side, Rear Right Side and Lower Right Side Covers

1. Remove the bottom front cover (see section 5.5).
2. Remove the paper exit tray.
3. Remove the front right side cover (2 screws).
4. Remove the rear right side cover (2 screws).
5. Remove the lower right side cover (2 screws).



Note :

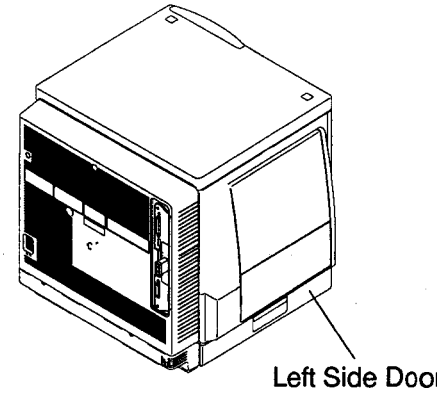
The lower right side cover is latched by metal tabs (Part A). When removing or reinstalling this cover, it must be released from the tabs or latched with the tabs.



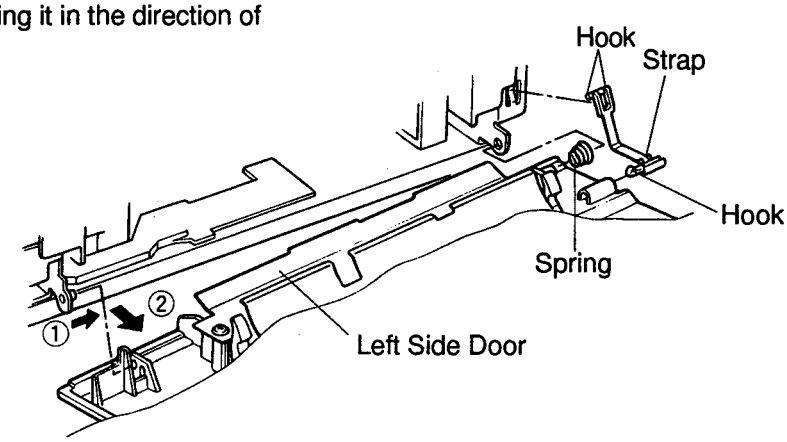
5.7 Left Side Door

5.7.1 Left Side Door Removal

1. Open the left side door.

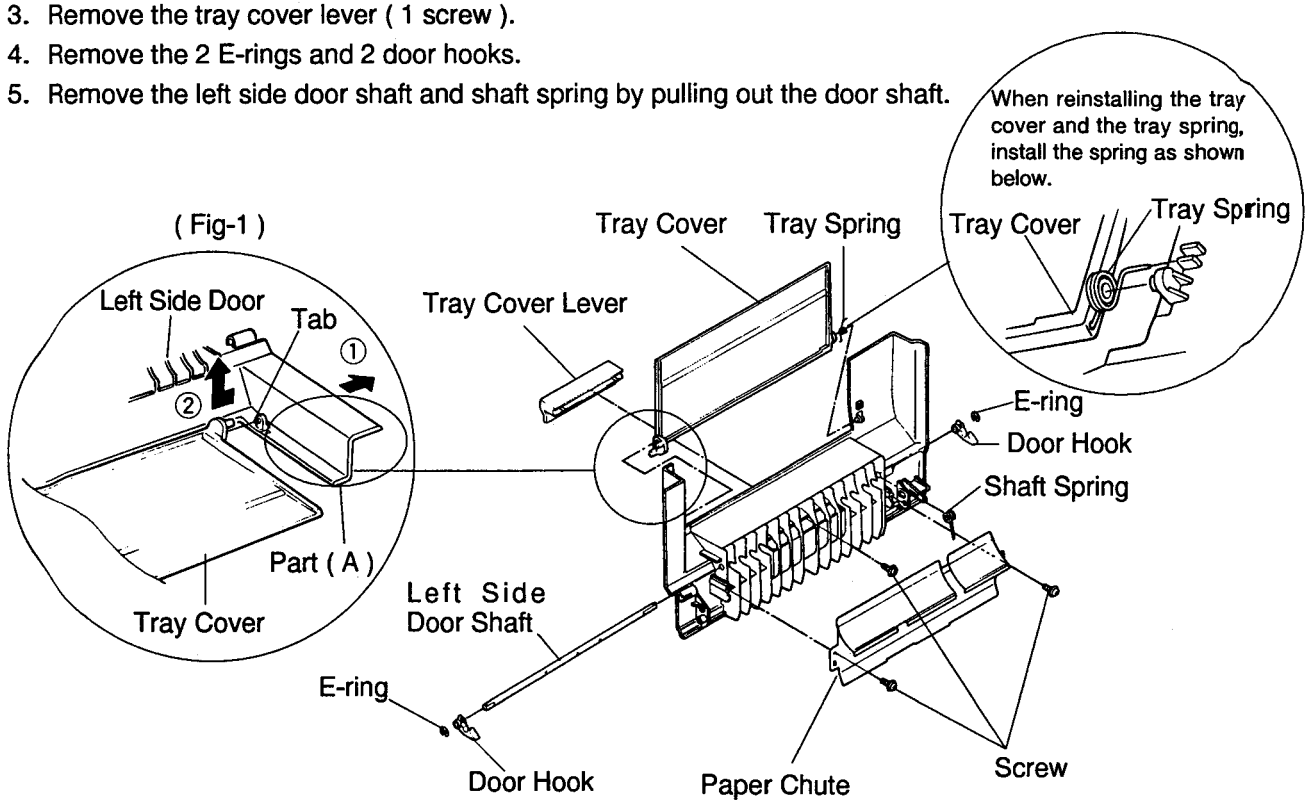


2. Remove the black strap by releasing the hooks.
3. Remove the left side door by sliding it in the direction of arrows ①, ②.



5.7.2 Left Side Door Sub Assembly

1. Remove the tray cover by sliding it in direction of arrow ② while slightly deflecting part (A) of left side door in the direction of arrow ①. Release the tray cover from the tab on the left side door as shown in the Fig-1.
2. Remove the paper chute (2 screws).
3. Remove the tray cover lever (1 screw).
4. Remove the 2 E-rings and 2 door hooks.
5. Remove the left side door shaft and shaft spring by pulling out the door shaft.



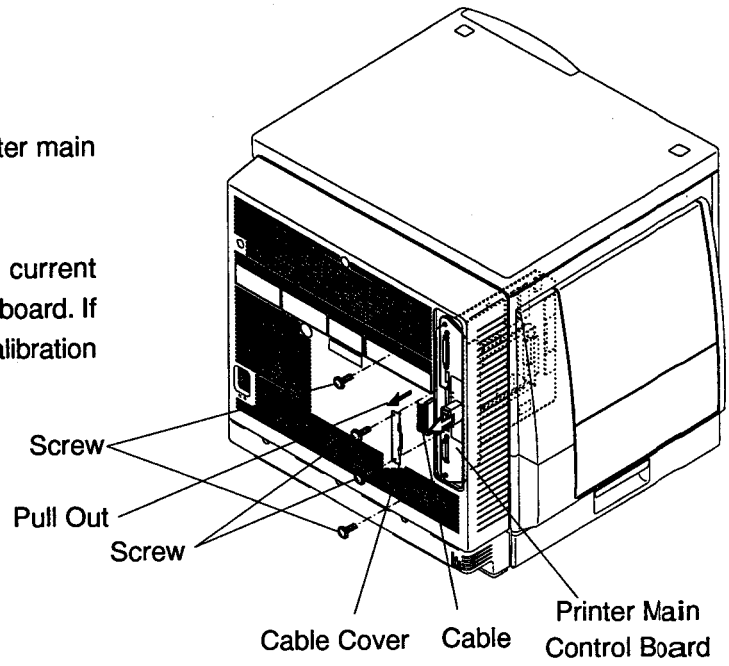
5.8 Printer Main Control Board, HSYNC Board and Network Relay Board

5.8.1 Printer Main Board Removal

1. Remove the cable cover (2 screws).
2. Disconnect the connector by pulling the tab.
3. Remove the 2 screws, then pull out the printer main board.

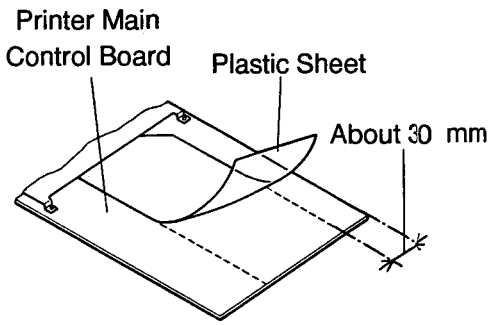
Note:

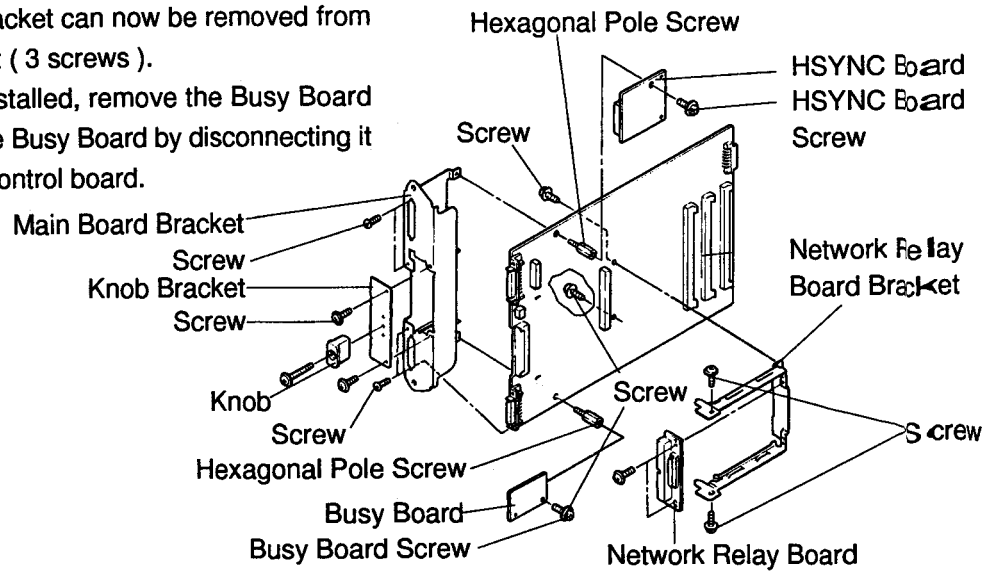
When replacing the printer main board, the current EEPROM (IC9) must be installed on the new board. If the EEPROM is damaged, the color density calibration must be reset. Refer to Section 7.2.



5.8.2 Printer Main Control Board Disassembly, HSYNC Board and Network Relay Board

1. Remove the HSYNC board screw.
2. Remove the HSYNC board by disconnecting it from the printer main control board.
3. Remove the network relay board bracket with the network relay board(4 screws).
4. Peel off the plastic sheet from the printer main control board. (When reinstalling the plastic sheet, stick it as shown.)
5. Separate the network relay board from the network relay board bracket (2 screws).
6. Remove the hexagonal pole screw.
7. Remove the screw from the printer main control board.
8. Remove the 4 screws from the connectors.
9. Separate the main board bracket from the printer main control board.
10. The knob and knob bracket can now be removed from the main board bracket (3 screws).
    If the Busy Board is installed, remove the Busy Board screw, then remove the Busy Board by disconnecting it from the printer main control board.

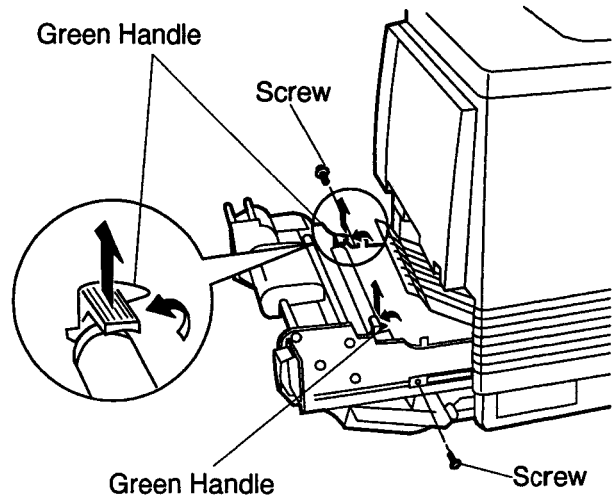




5.9 Paper Feed Unit

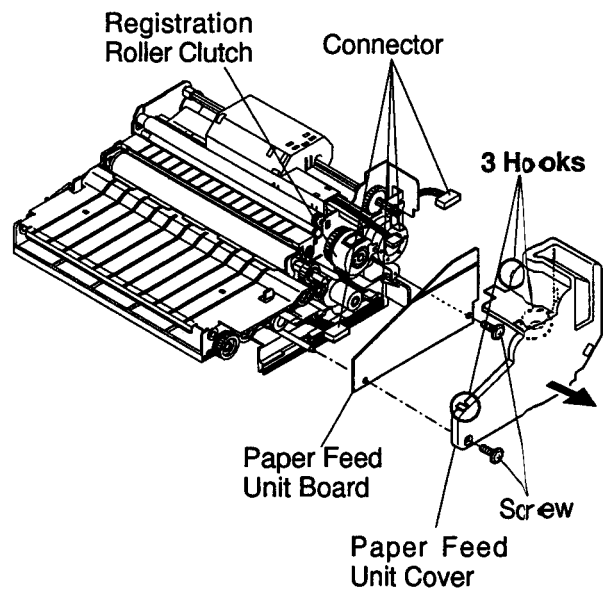
5.9.1 Paper Feed Unit Removal

1. Open the left side door to access the paper feed unit.
2. Slide out the paper feed until it stops.
3. Push in on the two green tabs to unlock the paper chute. Lift the paper chute until it catches, in the open position.
4. Rotate the green handles on the transfer roller. Lift out the transfer roller/waste bin (consumable) to avoid toner spillage.
5. Remove the 2 screws.
6. Slide the paper feed unit off the rails.

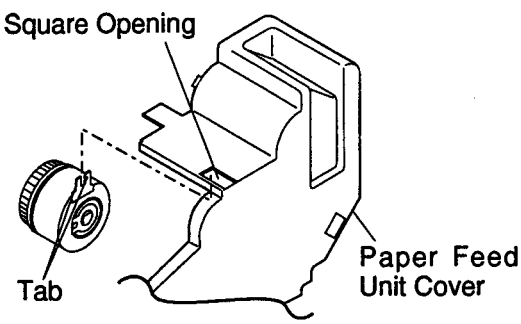


5.9.2 Paper Feed Unit Board and M.P.T Paper Out/Registration Sensor Board

1. Remove the screw from the paper feed unit cover.
2. Remove the paper feed unit cover while releasing the 3 hooks.
3. Remove the paper feed unit board (1 screw).
4. Disconnect the 4 connectors on the paper feed unit board.

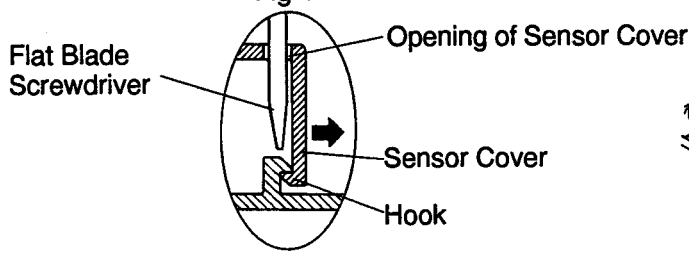


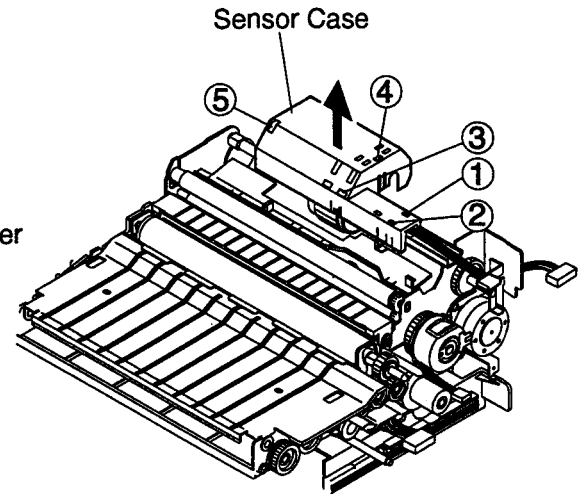
Note :
When reinstalling the paper feed unit cover, the tabs of the registration roller clutch must be aligned with the square opening.



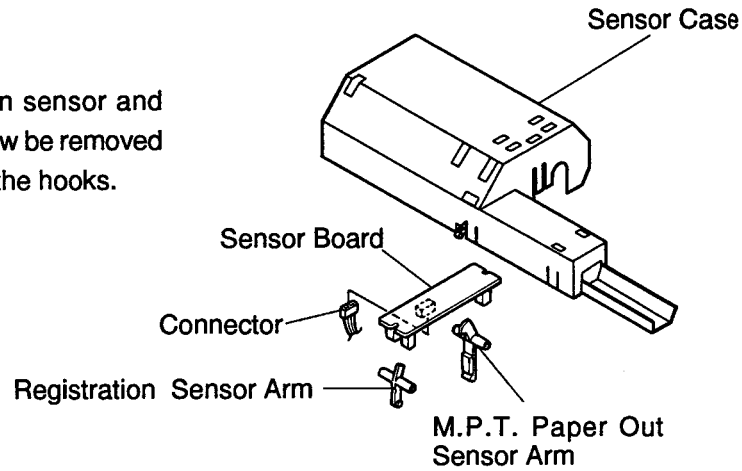
5. Remove the sensor case with the sensors after releasing the 5 hooks in order ① ~ ⑤ using a flat blade screwdriver (Fig-1).

Fig-1



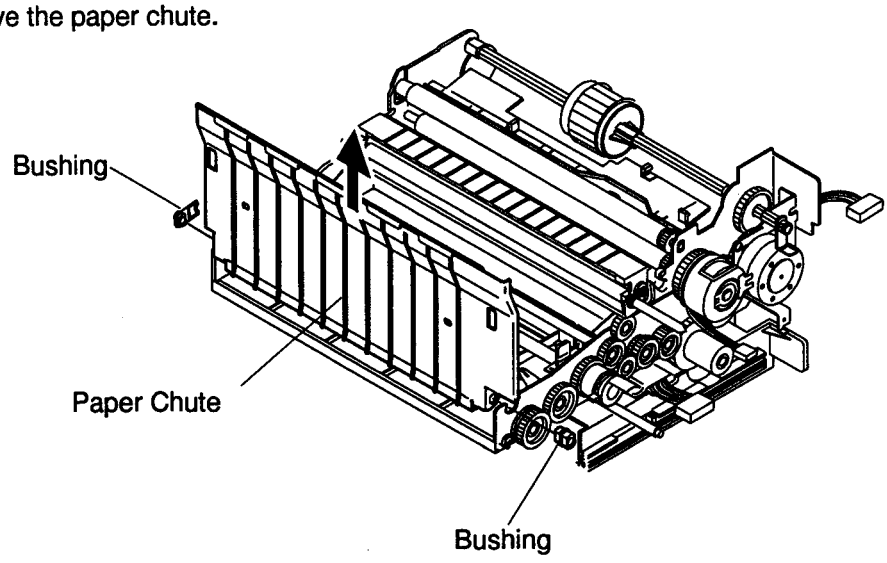


The M.P.T paper out sensor, registration sensor and M.P.T Paper Out/reg. Sensor Board can now be removed from the sensor case by releasing it from the hooks.

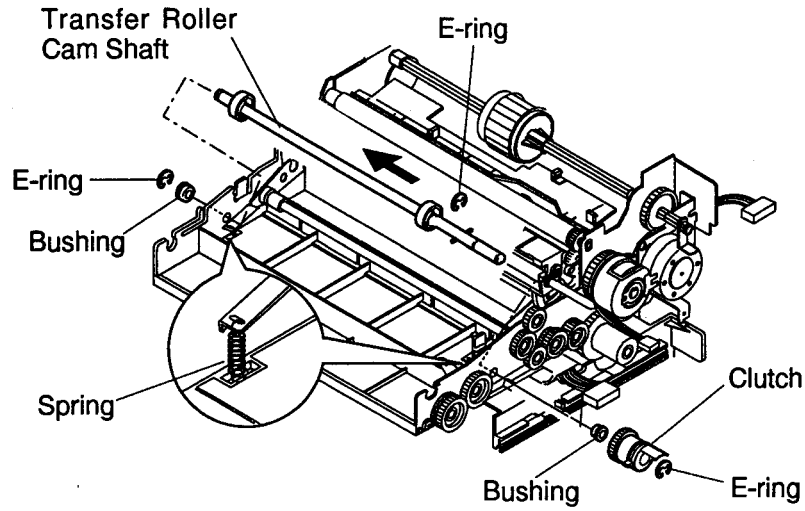


5.9.3 Transfer Roller Clutch, Transfer Roller Holder, Cleaning Roller Holder and Registration Roller

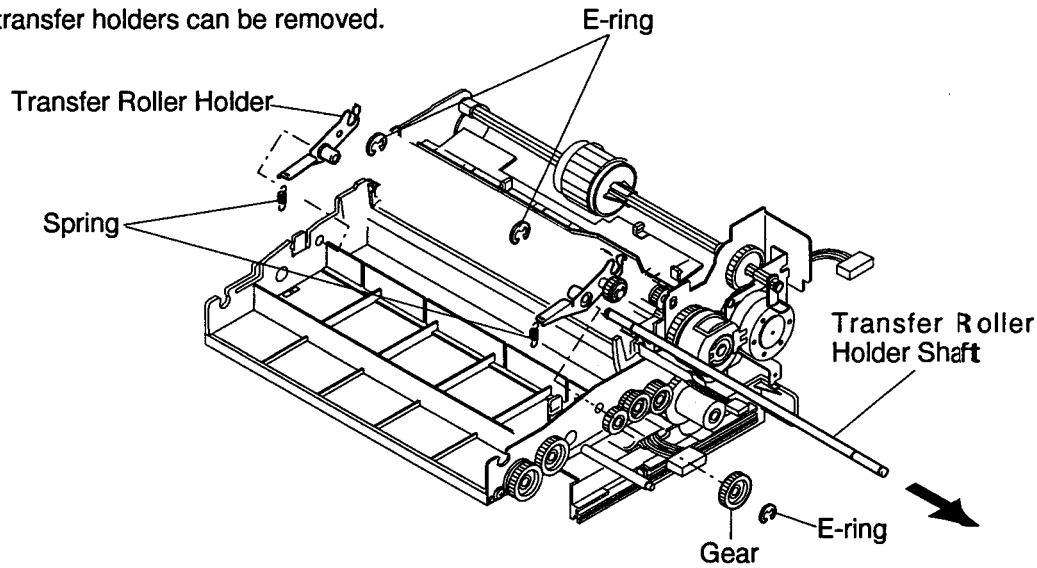
1. Pivot the paper chute to an upright position.
2. Lift and remove the paper chute.



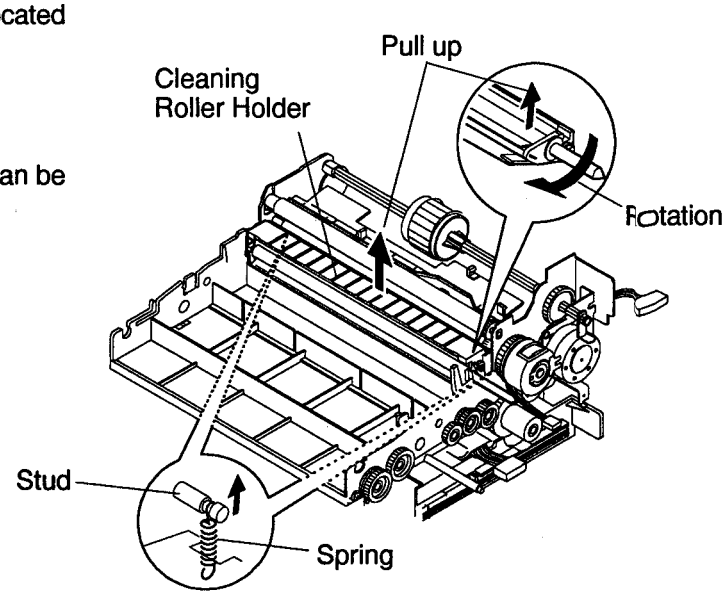
3. Remove the 3 E-rings and 2 springs from the transfer roller cam shaft.
4. Remove the clutch, 2 bushings and transfer roller cam shaft.



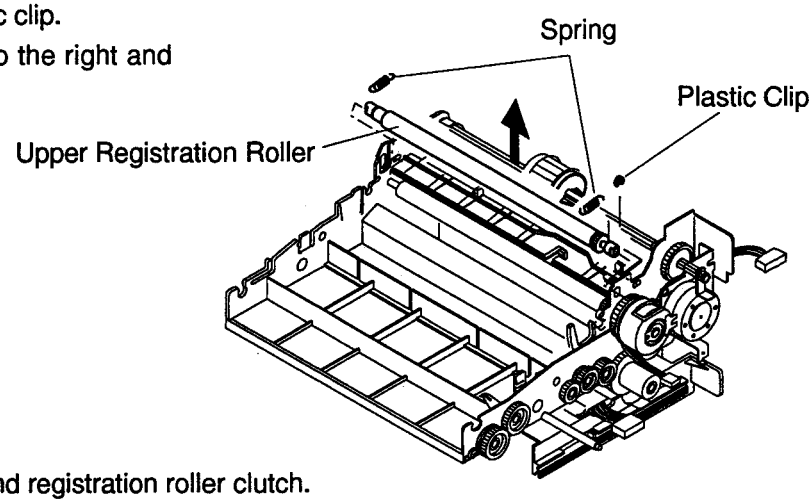
5. Remove the E-ring and gear from the transfer roller holder shaft.
6. Remove the 2 E-rings, then slide out the transfer roller holder shaft.
   The right and left transfer holders can be removed.



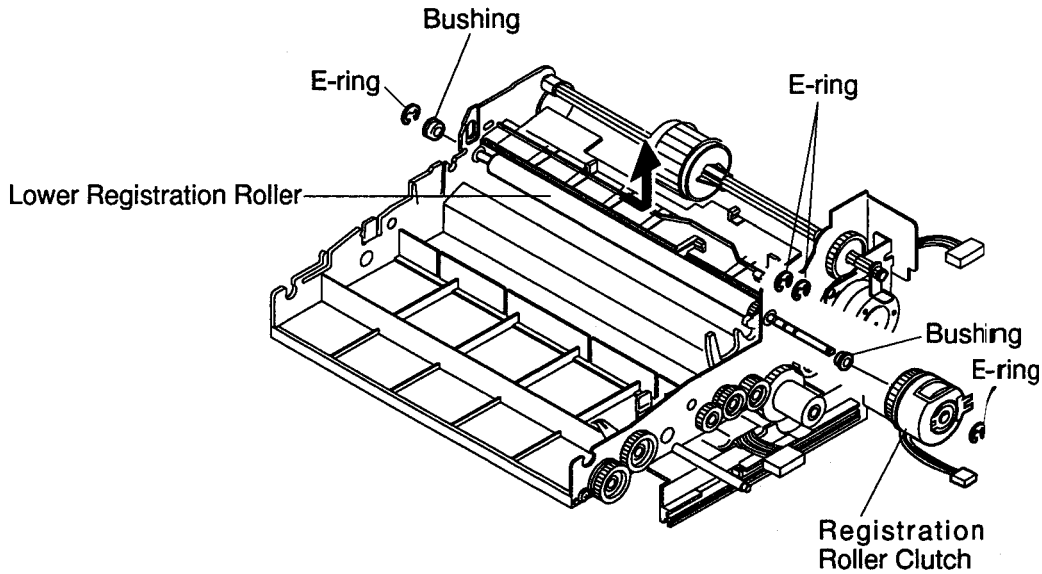
7. Release the 2 springs from the spring studs (located on back side of the paper feed unit).
8. Rotate the cleaning roller holder up.
9. Lift and remove the cleaning roller holder.
   The cleaning pressure roller and 2 bushings can be removed from the holder.



10. Remove the 2 springs and the plastic clip.
11. Move the upper registration roller to the right and remove.

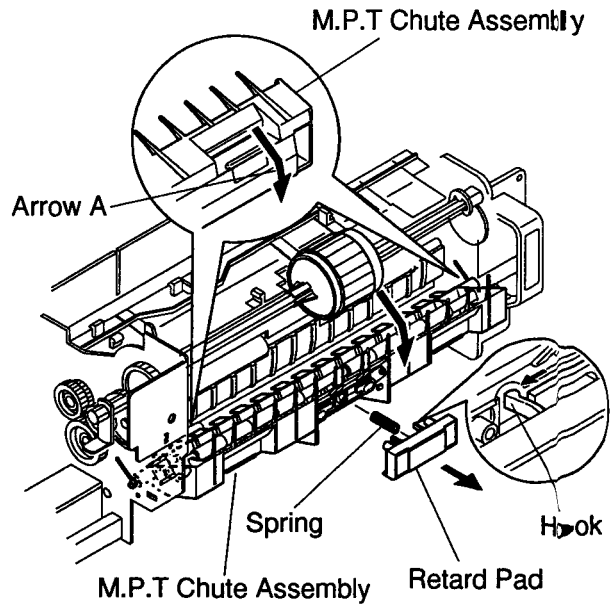


12. Remove the 4 E-rings, 2 bushings and registration roller clutch.
13. Remove the lower registration roller.



5.9.4 M.P.T Retard Pad

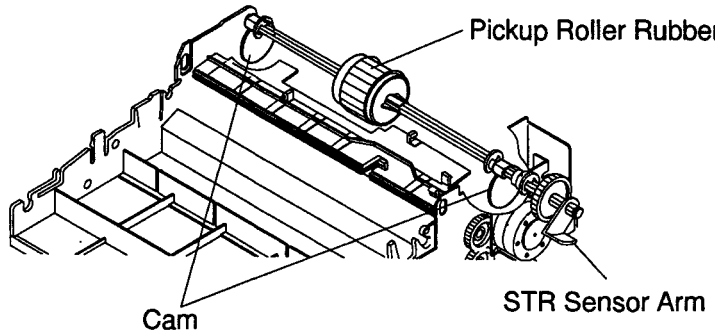
Open the M.P.T chute assembly with the retard pad by sliding it in the direction of arrow A.
Remove the retard pad by releasing the hooks.



5.9.5 M.P.T Motor, M.P.T Pickup Roller and M.P.T Pickup Roller Shaft

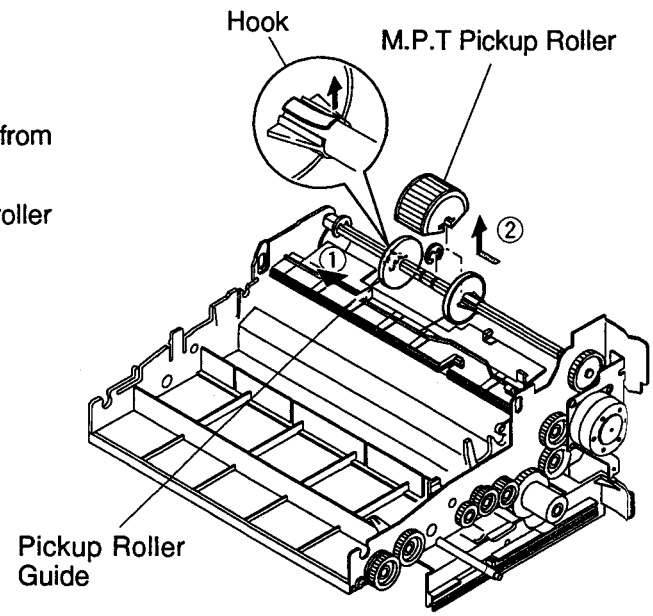
Note

When reinstalling the pickup roller and cam to the M.P.T pickup roller shaft, the rubber side of the M.P.T pickup roller, cams and STR sensor arm must be positioned as shown below.



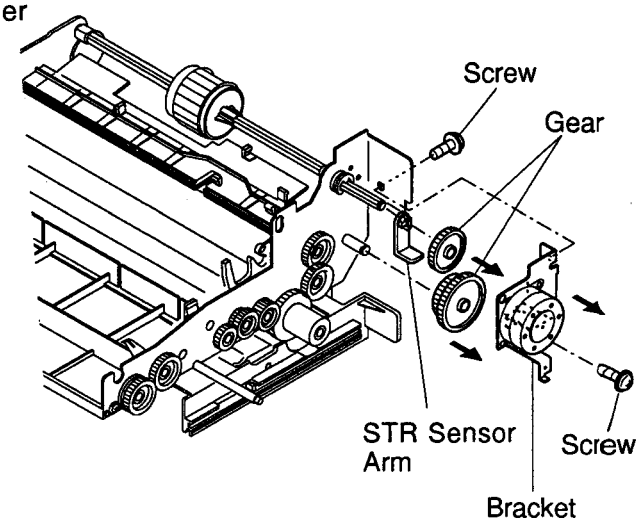
5.9.5.1 M.P.T Pickup Roller

1. Release the hook of the pickup roller guide roller from the M.P.T pickup roller shaft (arrow ①).
2. Remove the E-ring and slide the pickup guide roller in the direction indicated by the arrow (②).
3. Remove the M.P.T pickup roller.

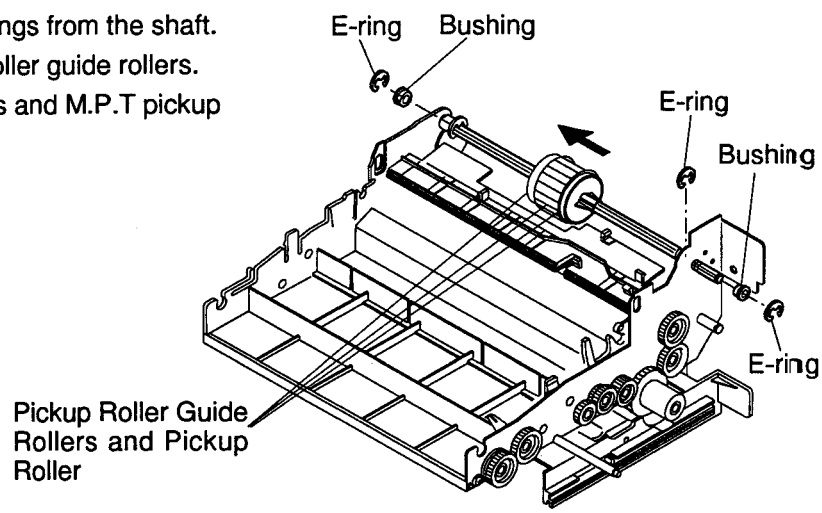


5.9.5.2 M.P.T Motor and M.P.T Pickup Roller Shaft

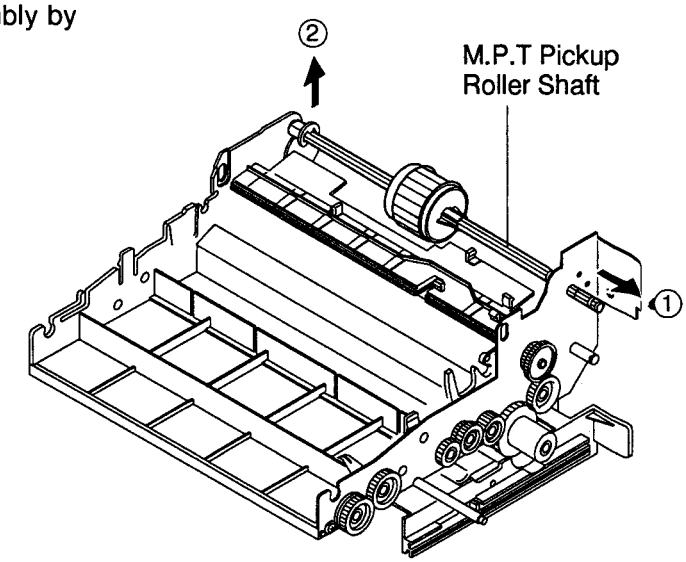
1. Remove the motor bracket with the motor (2 screws).
2. Remove the 2 gears and STR sensor arm after releasing the hooks.



3. Remove the 3 E-rings and 2 bushings from the shaft.
4. Release the hooks of the pickup roller guide rollers.
5. Move the pickup roller guide rollers and M.P.T pickup roller in the direction of the arrow.



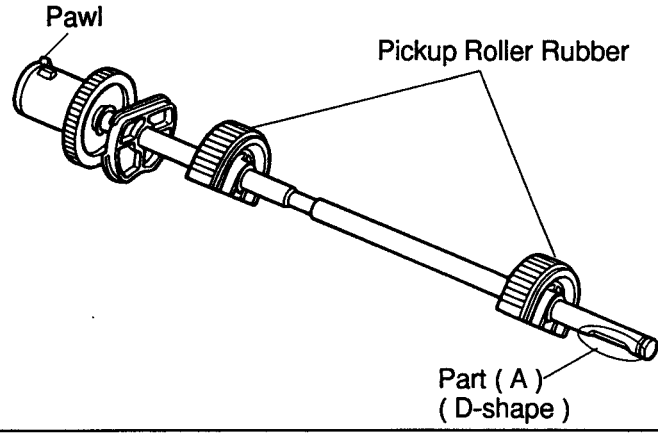
6. Remove the M.P.T pickup roller shaft assembly by sliding it in the order of the arrows ① ~ ②.
(If necessary, remove the M.P.T pickup roller.)



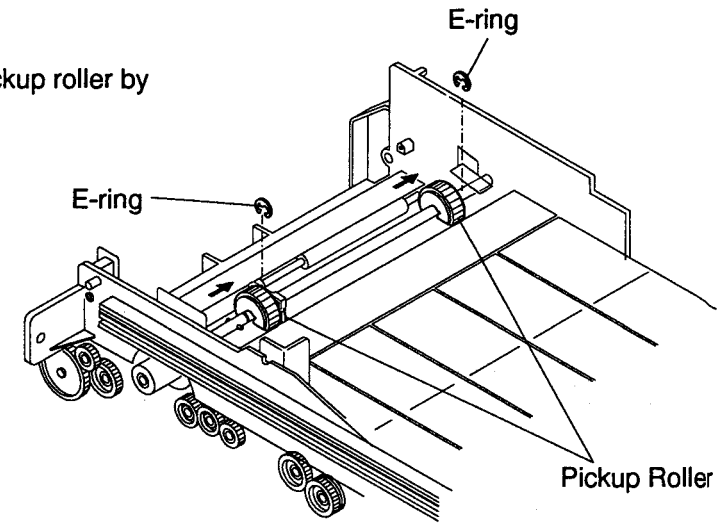
5.9.6 Pickup Roller, Pickup Roller Shaft Assembly and Paper Empty Sensor Arm

Note

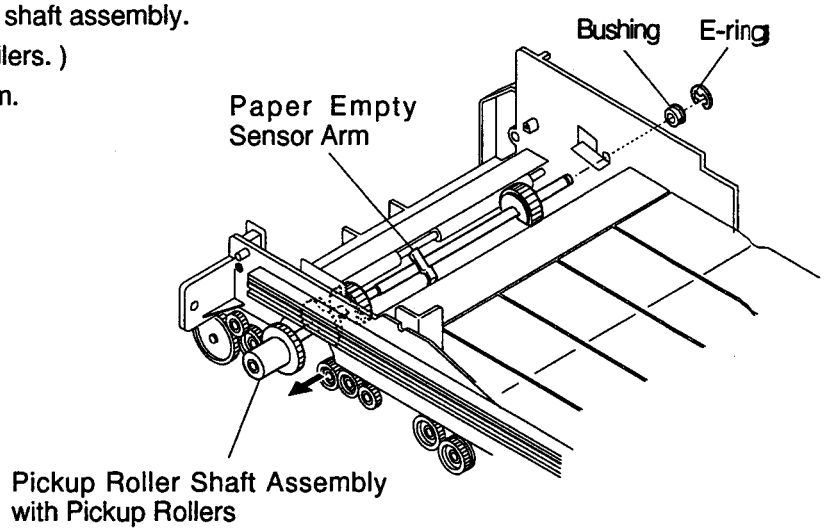
When reinstalling the pickup roller to the pickup roller shaft assembly with the clutch, the rubber side of both pickup rollers, the pawl on the clutch, and part (A) of the pickup roller shaft must be positioned as shown below.



1. Place the unit face down.
2. Remove the E-ring, then remove the pickup roller by sliding it in the direction of the arrow.



3. Remove the E-ring and pickup roller shaft assembly.
   (If necessary, remove the pickup rollers.)
4. Remove the paper empty sensor arm.

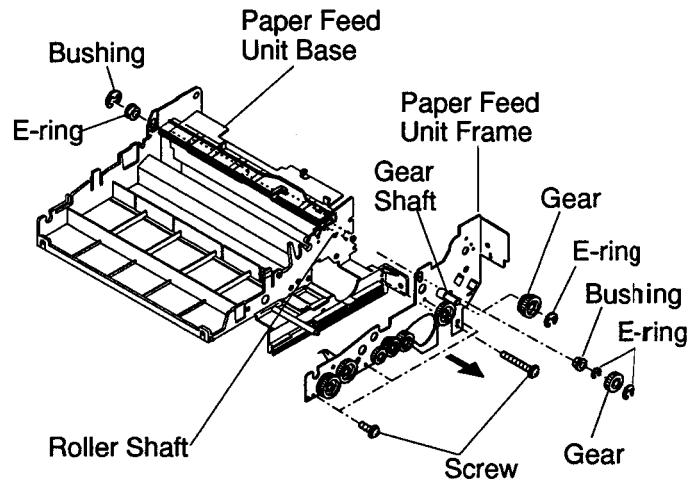


5.9.7 Paper Feed Roller and Paper Feed Unit Frame

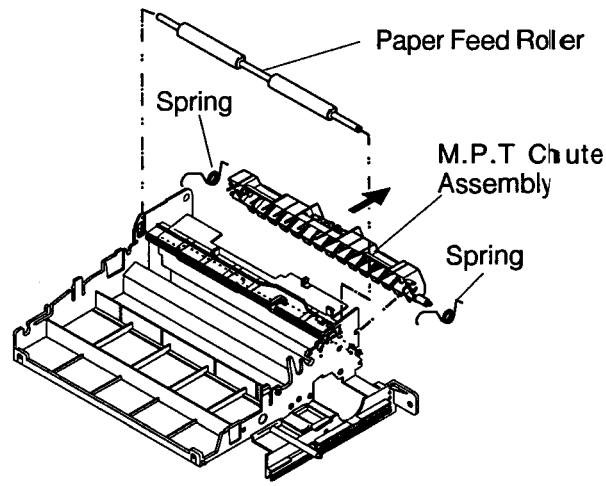
Remove the following parts :

a. Paper Feed Unit Cover, Paper Feed Unit Board, Sensor Case :(see section 5.9.2)
b. Transfer Roller Cam Shaft, Transfer Roller Holder Shaft, Cleaning Roller Holder and Registration Roller :(see section 5.9.3)
c. M.P.T Motor and M.P.T Pickup Roller Shaft :(see 5.9.5)
d. Pickup Roller Shaft and Paper Empty Sensor Arm :(see 5.9.6)

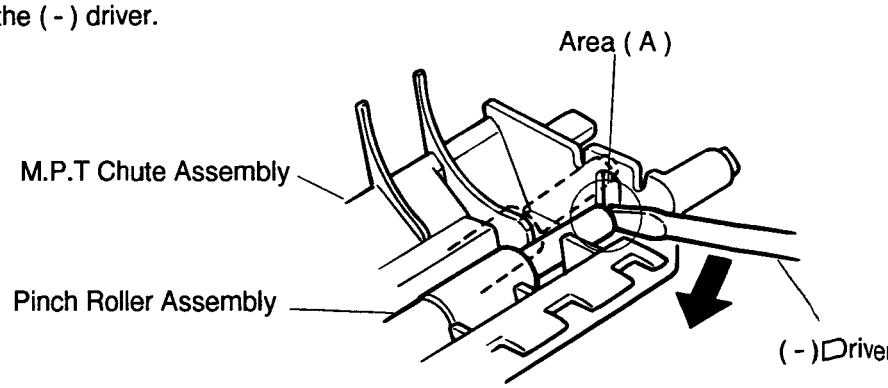
1. Remove the E-ring and gear from the gear shaft.
2. Remove the 3 E-rings, gear and 2 bushings from the paper feed roller shaft.
3. Remove the 4 screws from the paper feed unit frame.
4. Remove the paper feed unit frame from the paper feed unit base.



5. Remove the paper feed roller from the paper feed unit base.
6. Remove the spring and M.P.T chute assembly.



7. Remove the 2 springs from the M.P.T chute assembly.
8. Remove the pinch roller assembly while distorting the area (A) of the M.P.T Chute using the (-) driver.

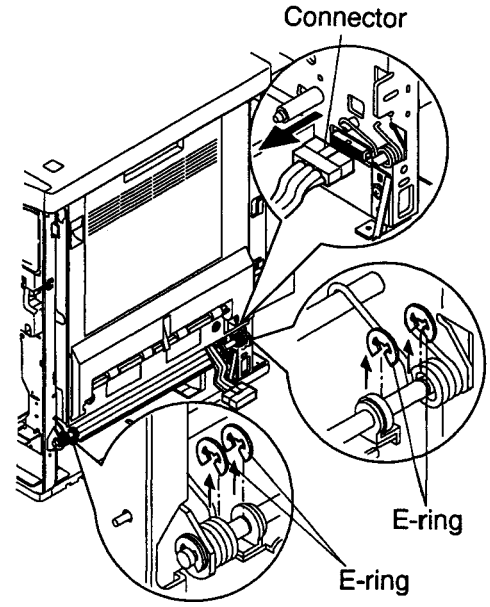


5.10 Toner Cartridge Selector/Paper-eject Unit

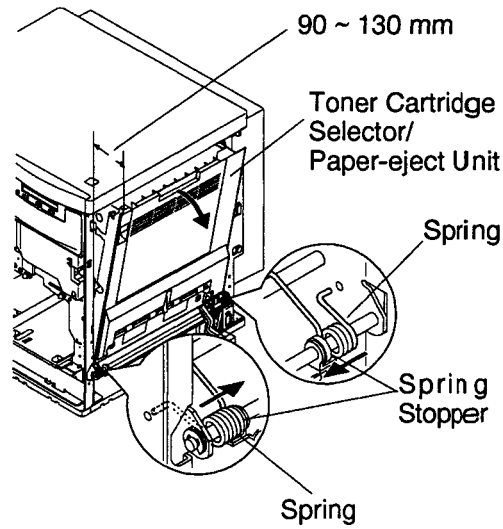
5.10.1 Toner Cartridge Selector/Paper-eject Unit Removal

1. Remove the paper exit tray, front right side cover, lower right side cover, rear right side cover, bottom front cover (see sections 5.5 and 5.6).

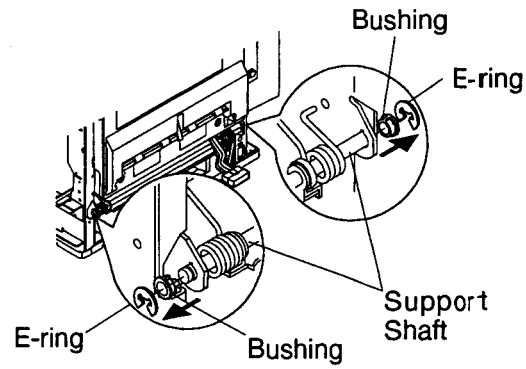
2. Remove the 4 E-rings and disconnect the connector.



3. To relive spring tension open the toner cartridge selector/paper-eject unit.
4. Slide the spring stoppers and springs in the direction of the arrows to unlatch the springs from the printer frame.



5. Close the unit.
6. Remove the 2 E-rings and 2 bushings.
7. Slide the support shaft to the right or left, and remove the unit.



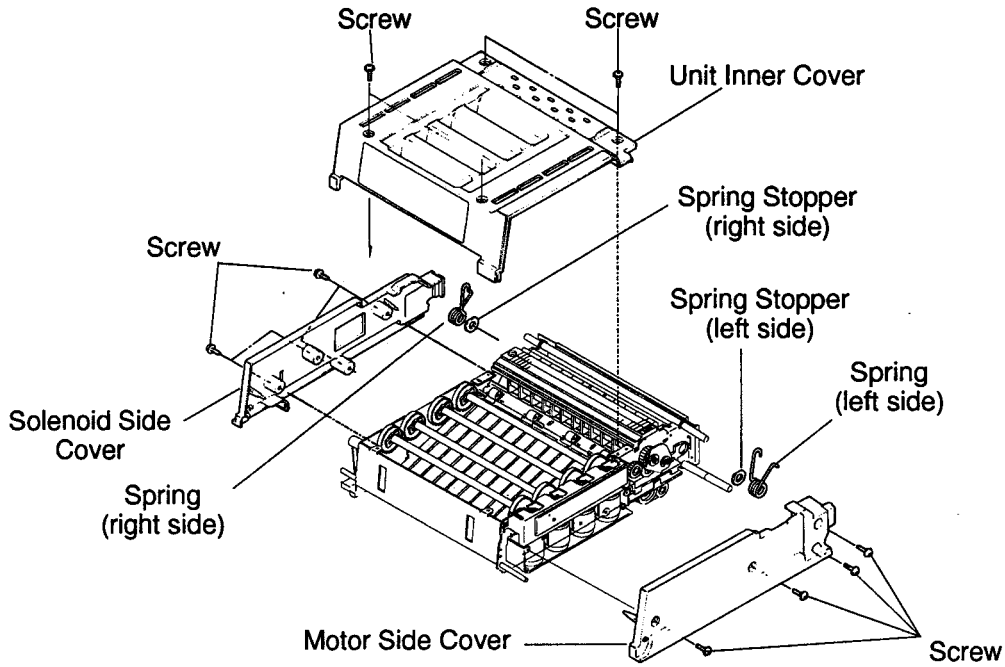
Note :

When reinstalling the toner cartridge selector/paper-eject unit, remove the solenoid side cover and motor side cover from the unit (see the section 5.10.2.1). Reinstall the unit on the printer by performing the procedure in reverse order.

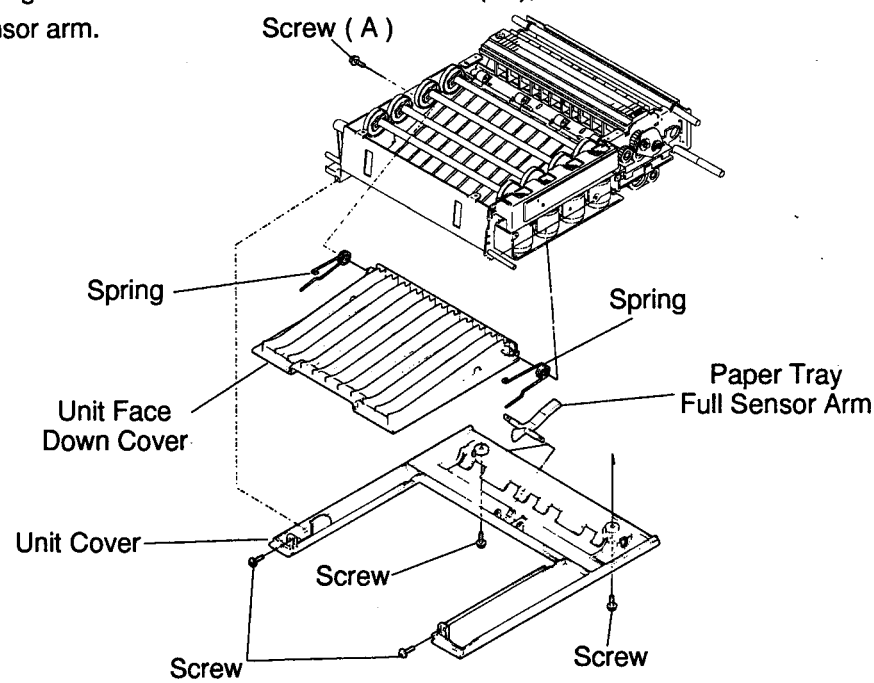
5.10.2 Covers, Sensor Boards (Paper Ejection, Paper Exit, Paper Tray Full) and Paper Ejection Roller

5.10.2.1 Covers

1. Remove the spring stopper (right side) and spring (right side).
2. Remove the 12 screws from the motor side cover, solenoid side cover and unit inner cover.
3. Remove the covers, spring stopper (left side) and spring (left side) .



4. Remove the unit cover (4 screws).
5. Release the 2 springs from the chassis frames and screw (A), then remove the unit face down cover and paper tray full sensor arm.

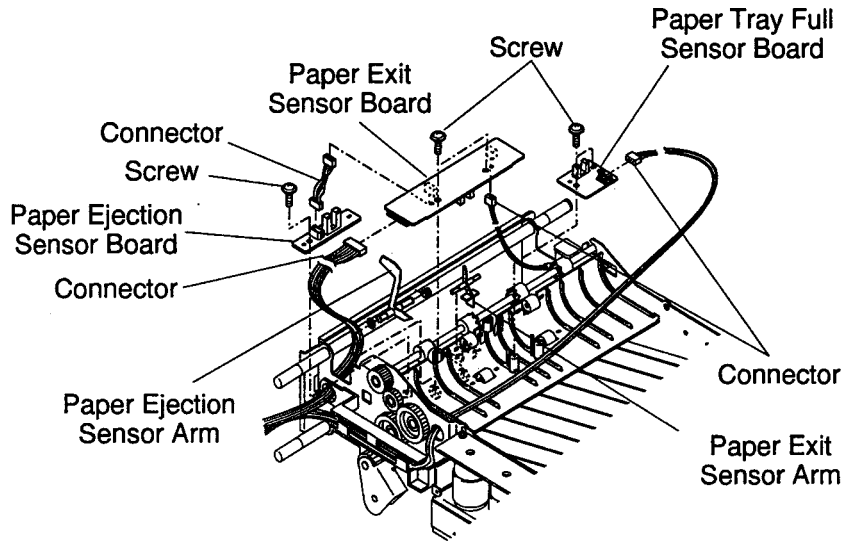


Note:
Before reinstalling the unit cover, the unit face down cover should be installed.

5.10.2.2 Sensor Boards (Paper Ejection, Paper Exit, Paper Tray Full) and Paper Ejection Roller

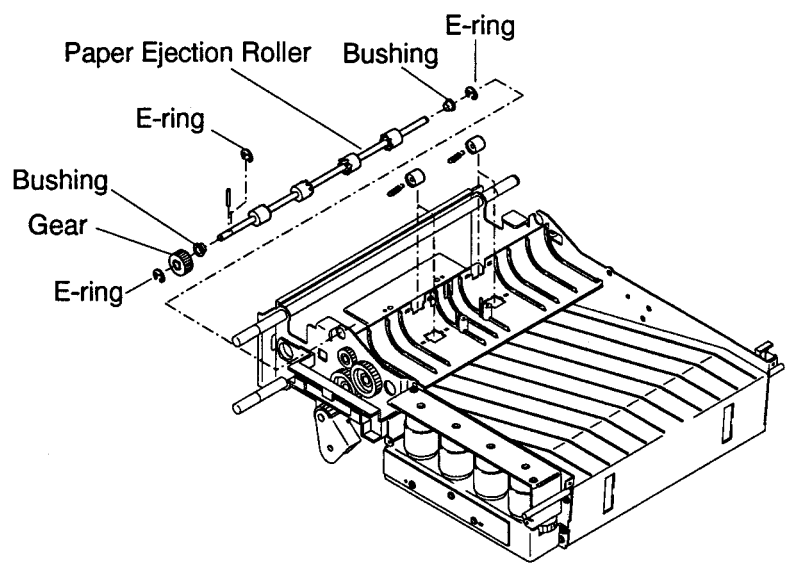
Sensor Boards (Paper Ejection, Paper Exit, Paper Tray Full)

1 Disconnect the connector on the paper tray full sensor board.
2. Remove the paper tray full sensor board (1 screw).
3. Remove the 2 screws from the paper exit sensor board.
4. Disconnect the 3 connectors on the paper exit sensor board. The paper exit sensor board can now be separated from the toner cartridge selector/paper-eject unit.
5. Remove the paper ejection sensor board (1 screw).



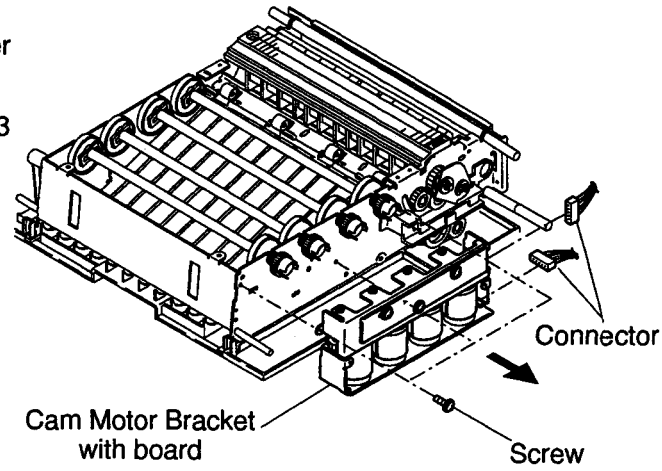
Paper Ejection Roller

1. Remove the 3 E-rings and 2 bushings from the paper ejection roller.
2. Remove the paper ejection roller.

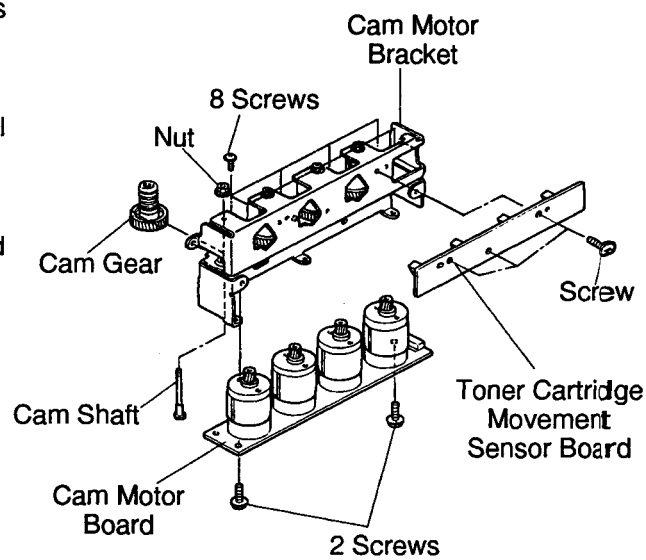


5.10.3 Cam Motor Board, Toner Cartridge Movement Sensor Board and Toner Selector Cam

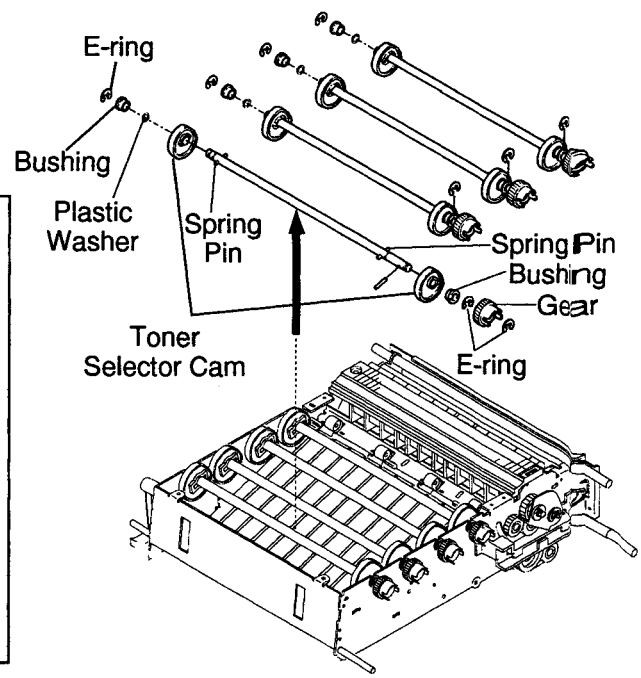
1. Remove the motor side cover, solenoid side cover and unit inner cover (see section 5.10.2.1).
2. Disconnect the 2 connectors, then remove the 3 screws from cam motor bracket.
3. Remove the cam motor bracket with the boards.



4. Remove the 8 screws from the bracket and 2 screws from the cam motor board.
5. Remove the cam motor board with the motors.
6. Remove the 4 nuts from the 4 cam shafts, then pull out the 4 cam shafts.
7. Remove the 4 cam gears.
8. Remove the toner cartridge movement sensor board (3 screws).

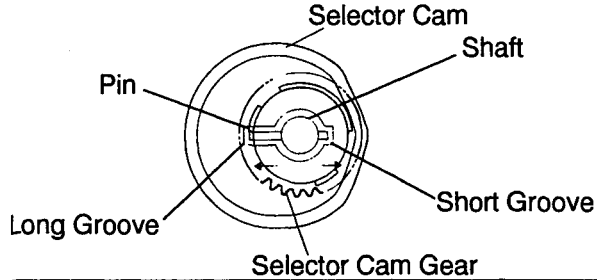


9. Remove the 3 E-rings, gear, plastic washer and 2 bushings from each shaft.
   The toner selector cam and toner selector shaft can now be removed.



Note :

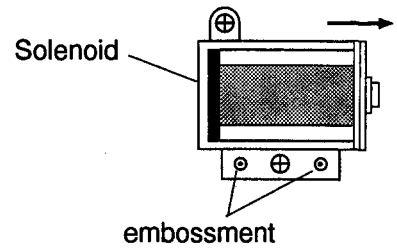
When reinstalling the toner selector cam and toner selector cam gear, make sure that the direction of the pin grooves for the cam and gear are the same.



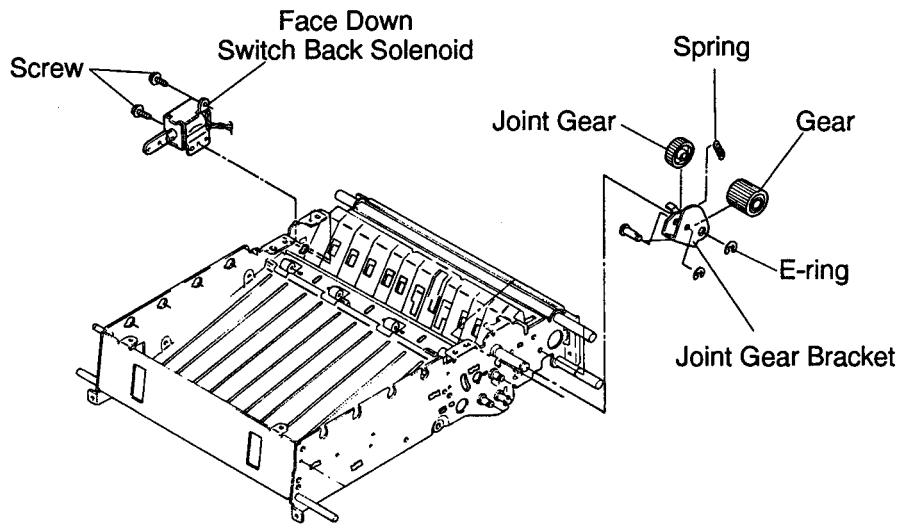
5.10.4 Joint Gear and Face Down Switch Back Solenoid

Note :

When reinstalling the solenoid, fit the 2 holes of the solenoid to the positioning embossments, then tighten the screws while pressing the solenoid to the arrow direction. This allows minimum stroke of the solenoid plunger.

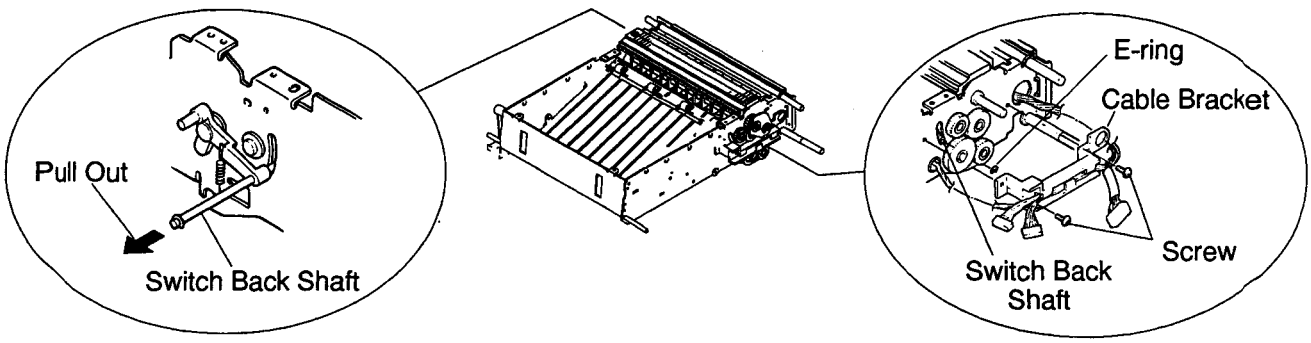


1. Remove the motor side cover, solenoid side cover and unit inner cover (see section 5.10.2.1).
2. Remove the E-rings and spring.
3. Remove the joint gear.
4. Remove the 2 screws and face down switch back solenoid.
5. Disconnect the connector on the paper ejection sensor board.

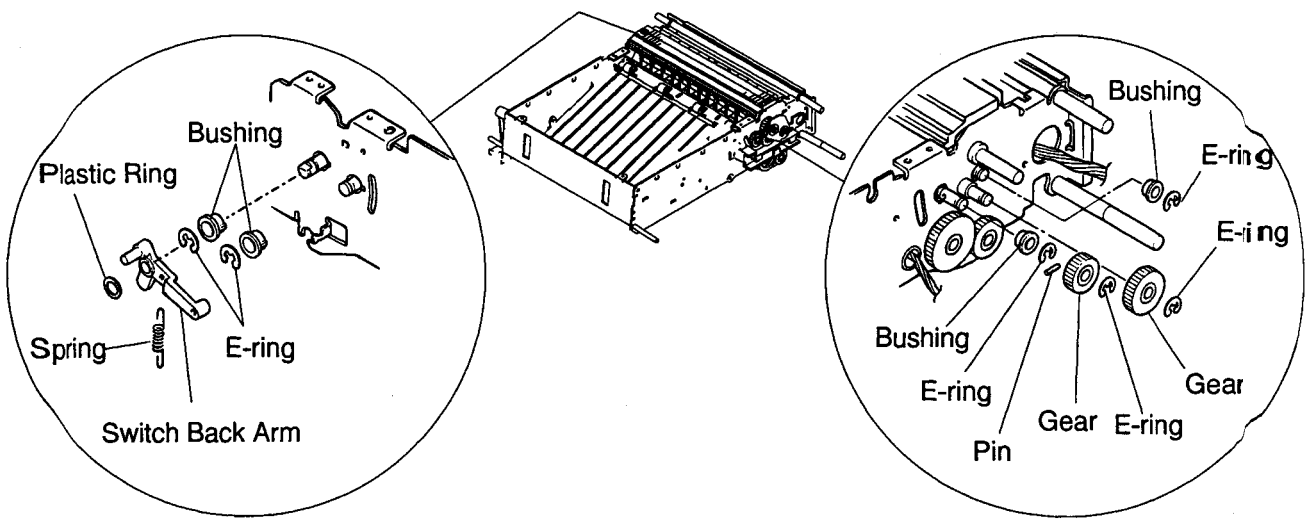


5.10.5 Switch Back Shaft, Switch Back Roller and Face Down Switch Gate

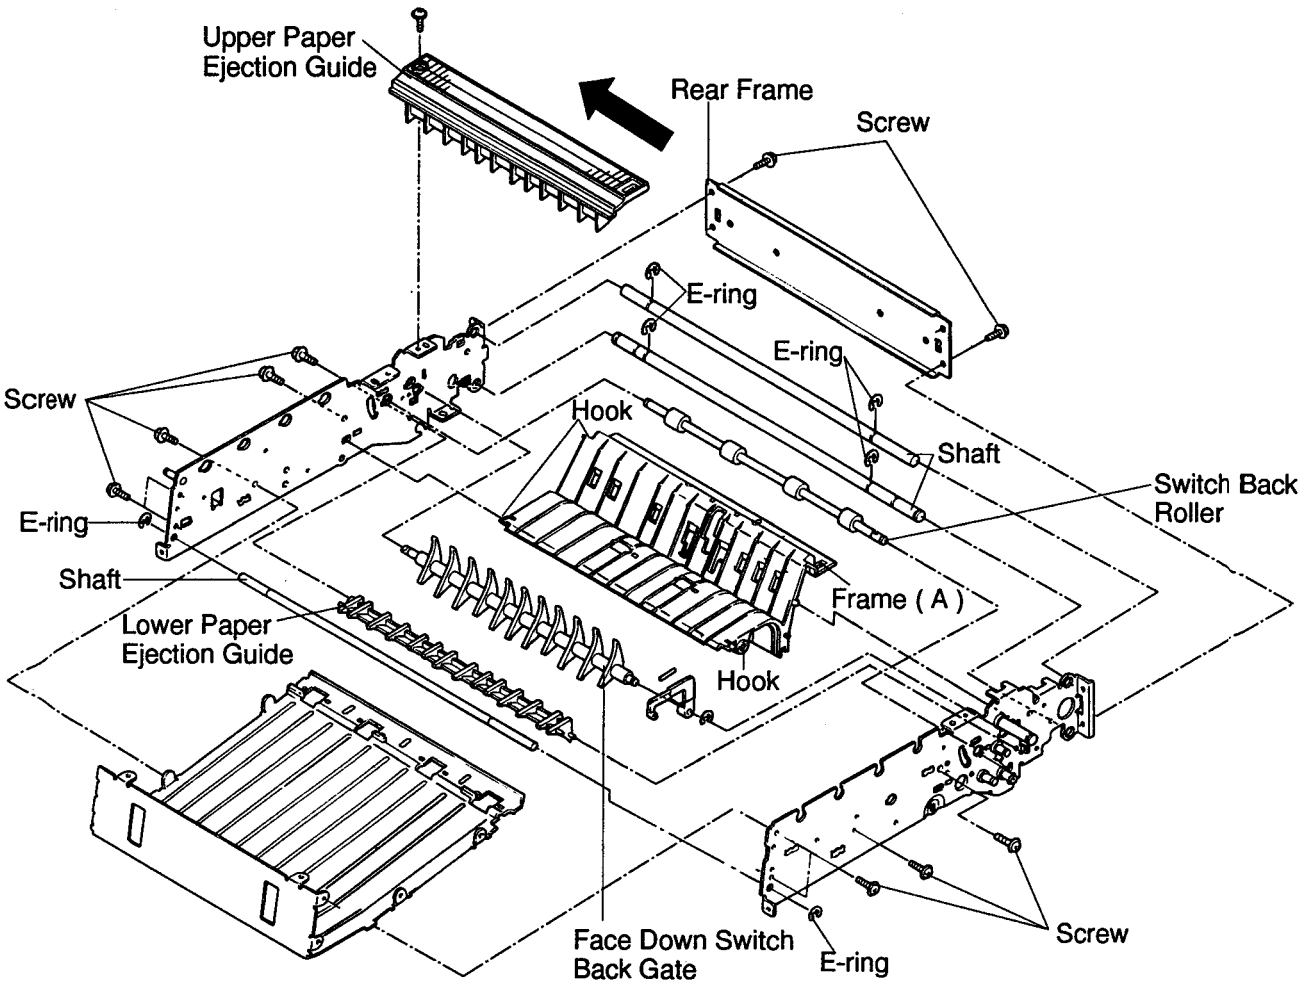
1. Remove the motor side cover, solenoid side cover and unit inner cover (see section 5.10.2.1).
2. Remove the paper ejection roller (see section 5.10.2.2).
3. Remove the cam motor bracket with board and toner selector cam (see section 5.10.3).
4. Remove the cable bracket (2 screws).
5. Remove the E-ring from the switch back shaft.
6. Pull out the switch back shaft.



7. Remove the joint gear and face down switch back solenoid (see section 5.10.4).
8. Remove the spring, plastic ring and switch back arm.
9. Remove the 4 E-rings, pin, 2 gears and 2 bushings from the right side chassis frame.
10. Remove the 2 E-rings and 2 bushings from the left side chassis frame.



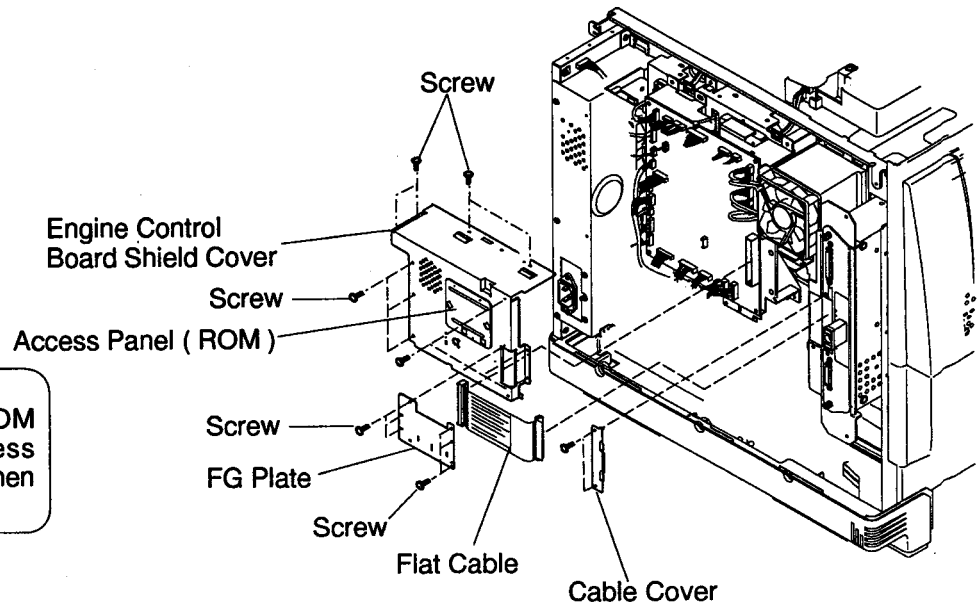
11. Remove the screw from the paper ejection guide.
12. Slide the paper ejection guide out in the direction of the arrow.
13. Remove the rear frame (2 screws).
14. Remove the 9 screws and 4 E-rings and release the hooks on the frame (A).
15. The switch back roller, face down switch back gate, all chassis frames, etc. can now be separated.



5.11 Engine Control Board Shield Cover

1. Remove the upper rear cover and top cover. (see section 5.1)
2. Remove the flat cable cover (2 screws).
3. Remove the FG plate (6 screws).
4. Remove the flat cable by disconnecting the cable connectors.
5. Remove 12 screws and the engine control board shield cover.

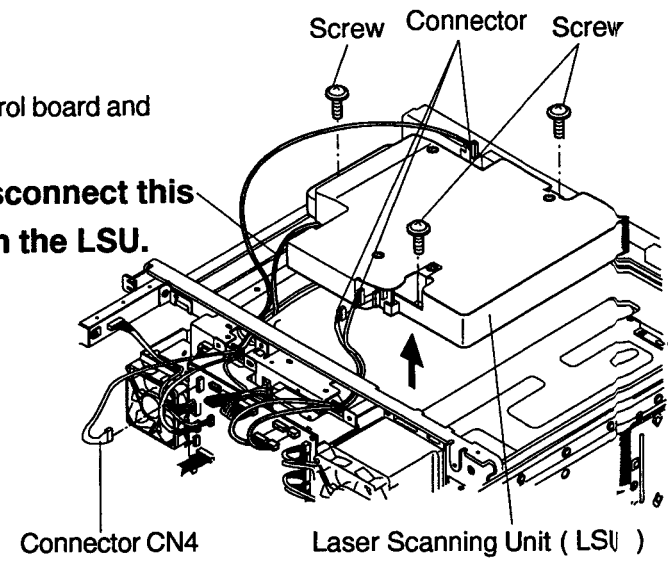
Note:
When replacing the ROM only, remove the access panel only (3 screws), then replace the ROM.



5.12 Laser Scanning Unit (LSU)

1. Remove the upper rear, lower rear and top covers (see section 5.1).
2. Remove the engine control board shield cover (see section 5.8).
3. Disconnect the 3 connectors from the LSU.
4. Disconnect the connector CN4 on the engine control board and cut the tie.
5. Remove the LSU (3 screws).

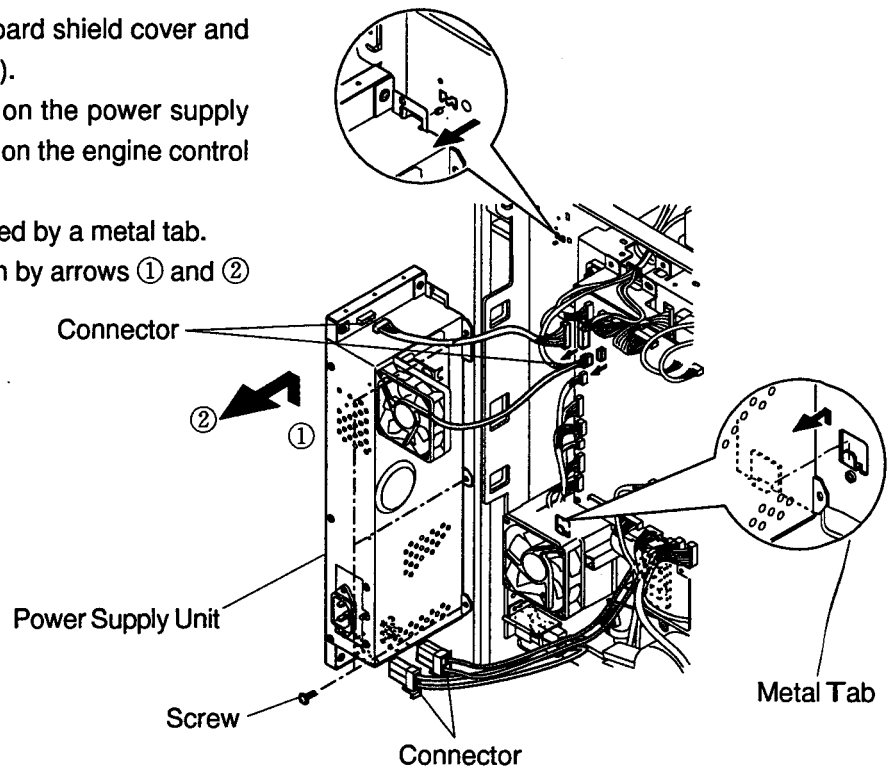
Do not disconnect this cable from the LSU.



5.13 Power Supply Unit

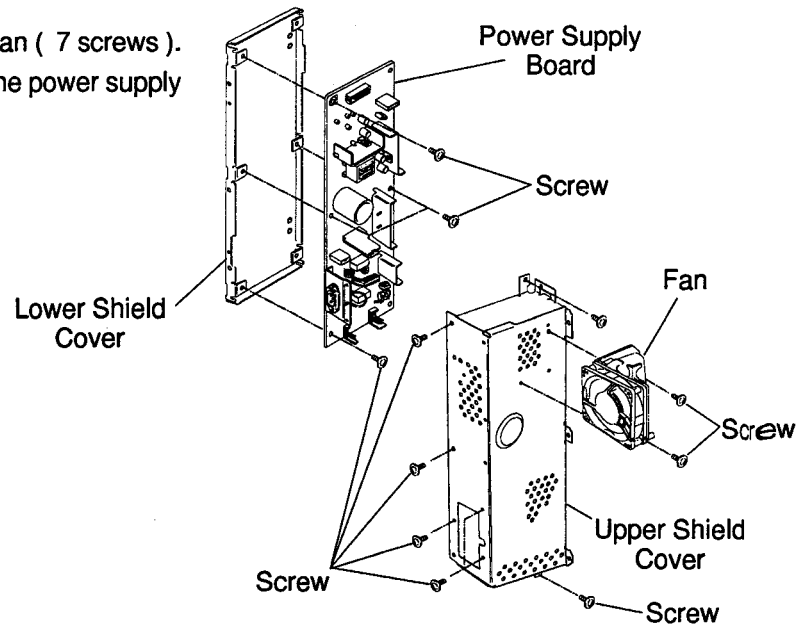
5.13.1 Power Supply Unit Removal

1. Remove the upper rear cover and top cover (see section 5.1).
2. Remove the engine control board shield cover and cable cover (see section 5.11).
3. Disconnect the 3 connectors on the power supply unit and 1 connector (CN30) on the engine control board.
4. The power supply unit is latched by a metal tab. Lift the power supply as shown by arrows ① and ② and remove.



5.13.2 Power Supply Unit Sub Assembly

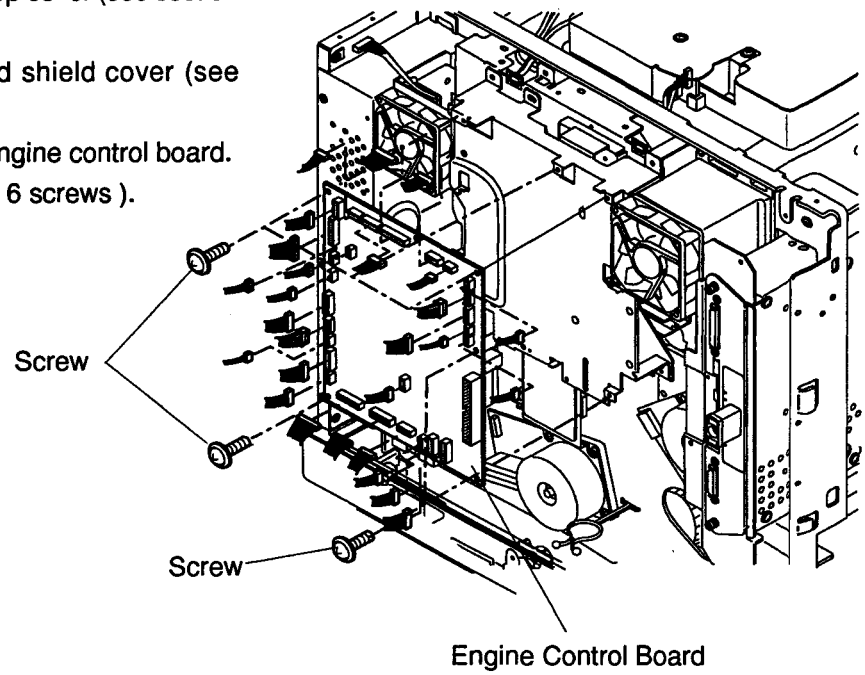
1. Remove the upper shield cover with fan (7 screws).
2. Remove the lower shield plate from the power supply board (4 screws).



5.14 Engine Control Board

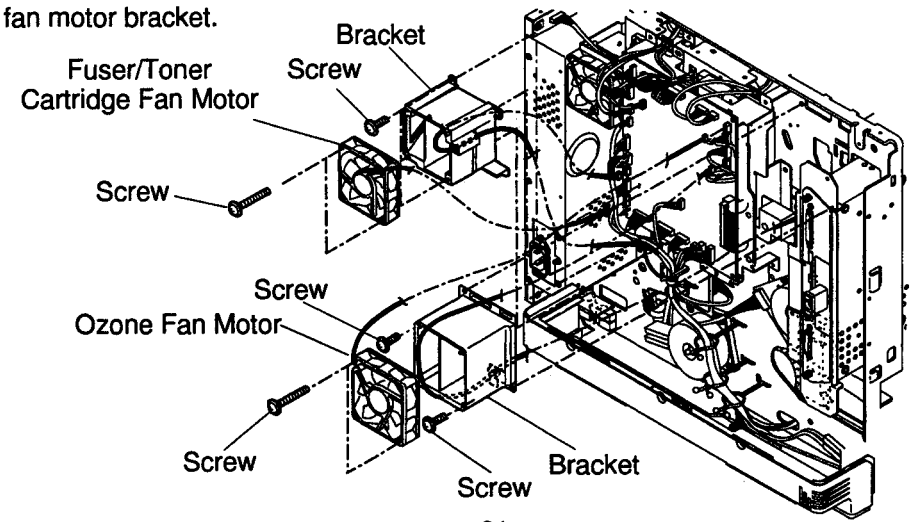
When replacing the engine control board, the top and the left calibration adjustment are needed. Refer to Section 8.

1. Remove the upper rear cover and top cover (see section 5.1).
2. Remove the engine control board shield cover (see section 5.11).
3. Disconnect all connectors on the engine control board.
4. Remove the engine control board (6 screws).



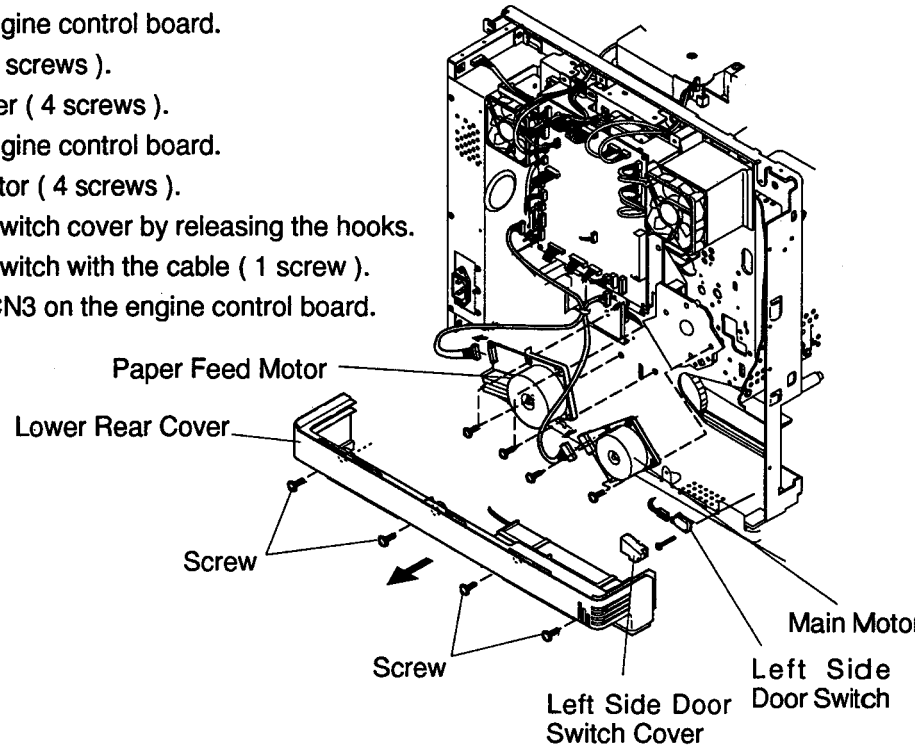
5.15 Fuser/Toner Cartridge Fan Motor and Ozone Fan Motor

1. Remove the upper rear cover and top cover (see section 5.1).
2. Remove the engine control board shield cover (see section 5.11).
3. Disconnect CN24 on the engine control board.
4. Remove the fuser/toner cartridge fan motor (2 screws).
5. Disconnect CN23 on the engine control board, and open the clamper.
6. Remove the 3 screws from the fuser/toner cartridge fan motor bracket.
7. Remove the fuser/toner cartridge fan motor bracket while releasing the cables from the bracket.
8. Disconnect CN9 and CN12 on the engine control board.
9. Remove the 2 screws and the ozone fan motor.
10. Remove the 2 screws from the ozone fan motor bracket.
11. Remove the ozone fan motor bracket while releasing the cables from the bracket.



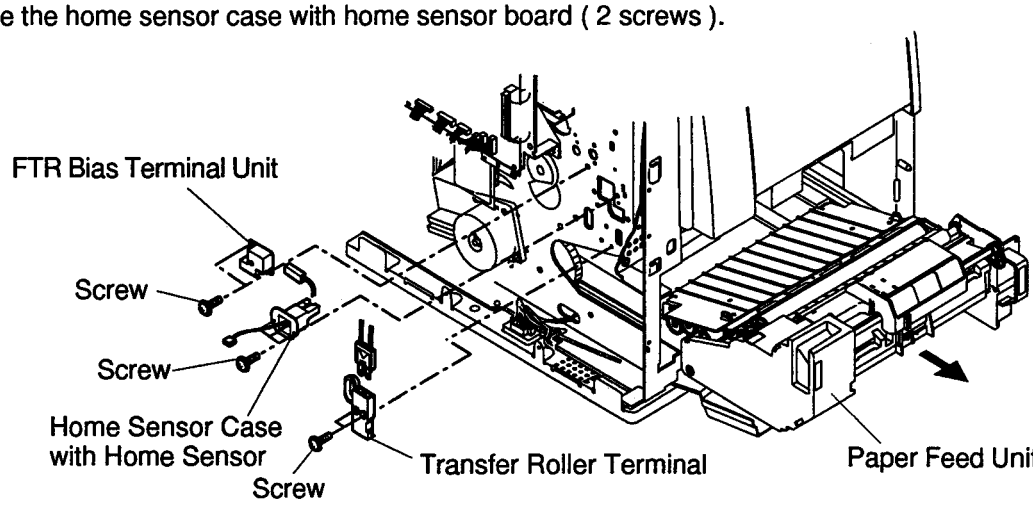
5.16 Main Motor, Paper Feed Motor and Left Side Door Switch

1. Remove the upper rear cover and top cover (see section 5.1).
2. Remove the engine control board shield cover (see section 5.11).
3. Disconnect CN16 on the engine control board.
4. Remove the main motor (4 screws).
5. Remove the lower rear cover (4 screws).
6. Disconnect CN22 on the engine control board.
7. Remove the paper feed motor (4 screws).
8. Remove the left side door switch cover by releasing the hooks.
9. Remove the left side door switch with the cable (1 screw).
10. Disconnect the connector CN3 on the engine control board.



5.17 Transfer Roller Bias Terminal, FTR Bias Terminal, Home Sensor Board and Fuser Joint Connector

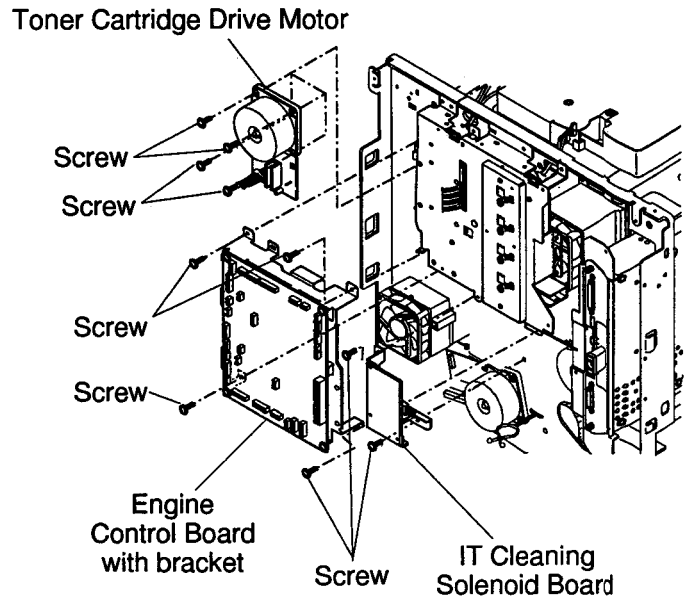
1. Remove the upper rear cover and top cover (see section 5.1).
2. Remove the engine control board shield cover (see section 5.11).
3. Remove the FTR bias terminal unit (2 screws).
4. Disconnect the cable from the FTR bias terminal.
5. Slide out the paper feed unit.
6. Disconnect the cable from the transfer roller bias terminal.
7. Remove the 2 screws.
   The transfer roller bias terminal is disassembled and can be removed from the chassis frame.
8. Disconnect CN13 on the engine control board.
9. Remove the home sensor case with home sensor board (2 screws).



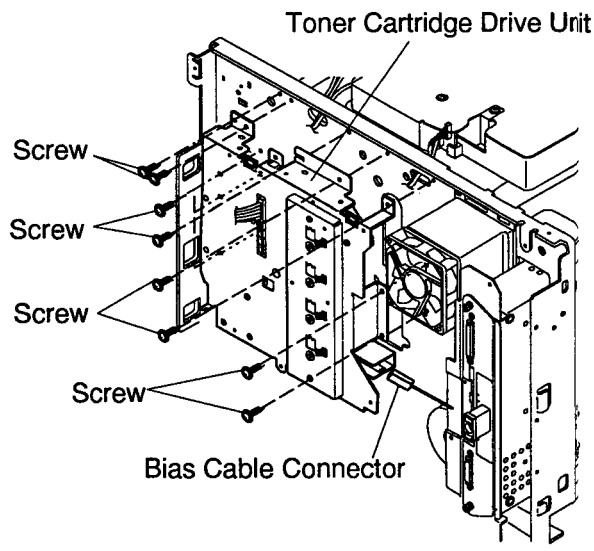
5.18 IT Cleaning Solenoid Board and Toner Cartridge Drive Motor/Toner Cartridge Drive Unit

5.18.1 Removal (IT Cleaning Solenoid Board and Toner Cartridge Drive Motor/Toner Cartridge Drive Unit)

1. Remove the upper rear cover and top cover (see section 5.1).
2. Remove the engine control board shield cover (see section 5.11).
3. Remove the power supply unit (see section 5.13.1).
4. Disconnect all connectors on the engine control board and release the clampers, clamping the cables.
5. Remove the engine control board with the bracket (4 screws).
6. Remove the IT cleaning solenoid board with the bracket (2 screws).
7. Remove the toner cartridge drive motor (4 screws).

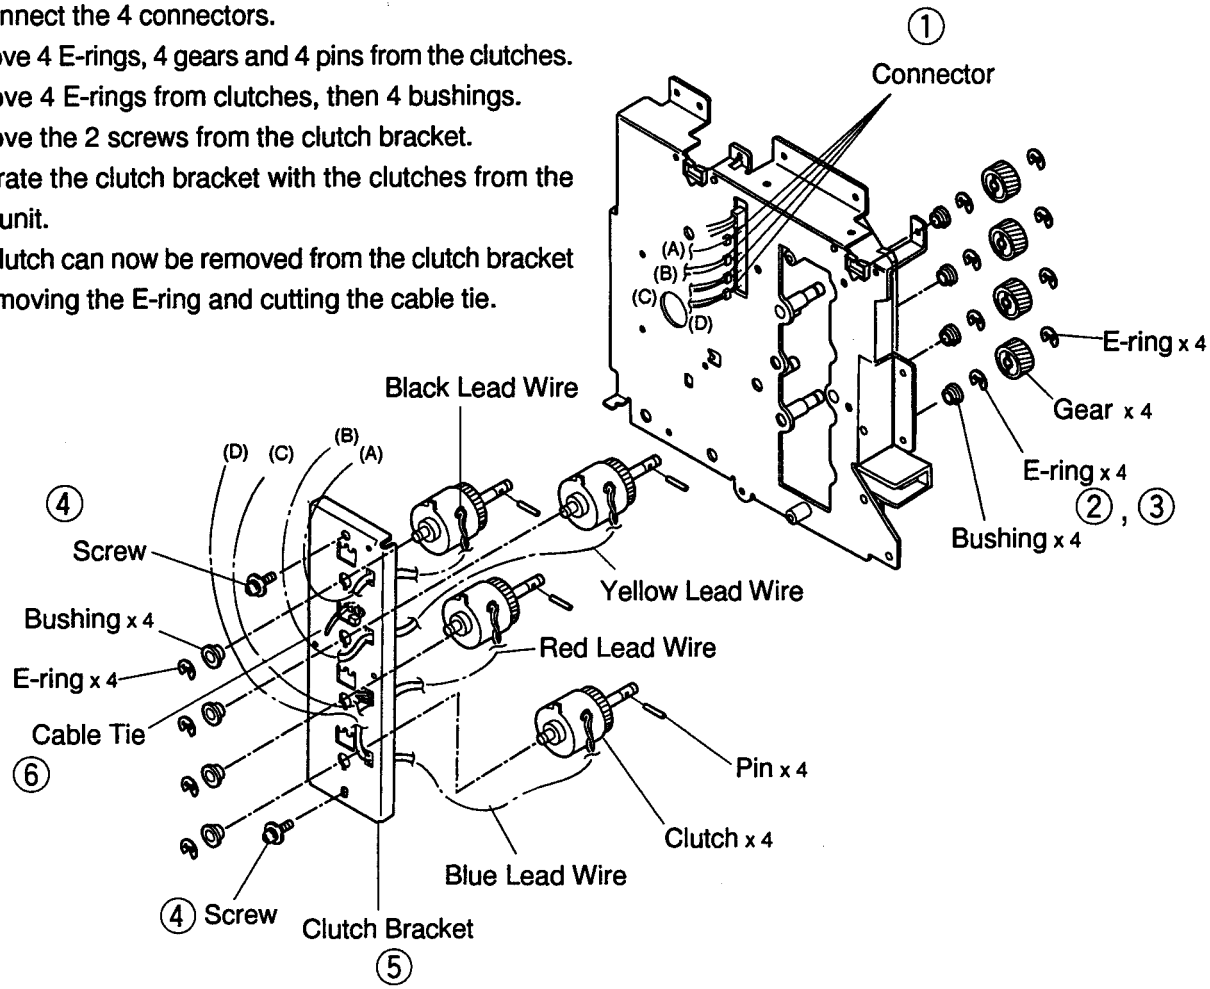


8. Disconnect the connector from the developer bias terminal.
9. Remove the toner cartridge drive unit (10 screws).

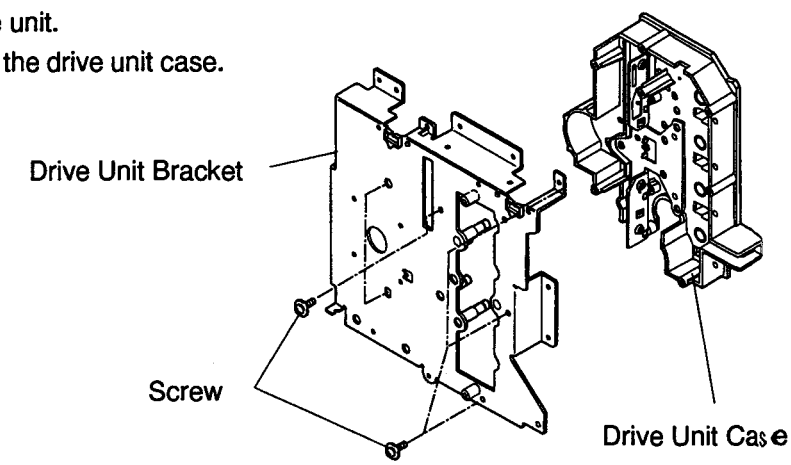


5.18.2 Toner Cartridge Drive Unit Sub Assembly

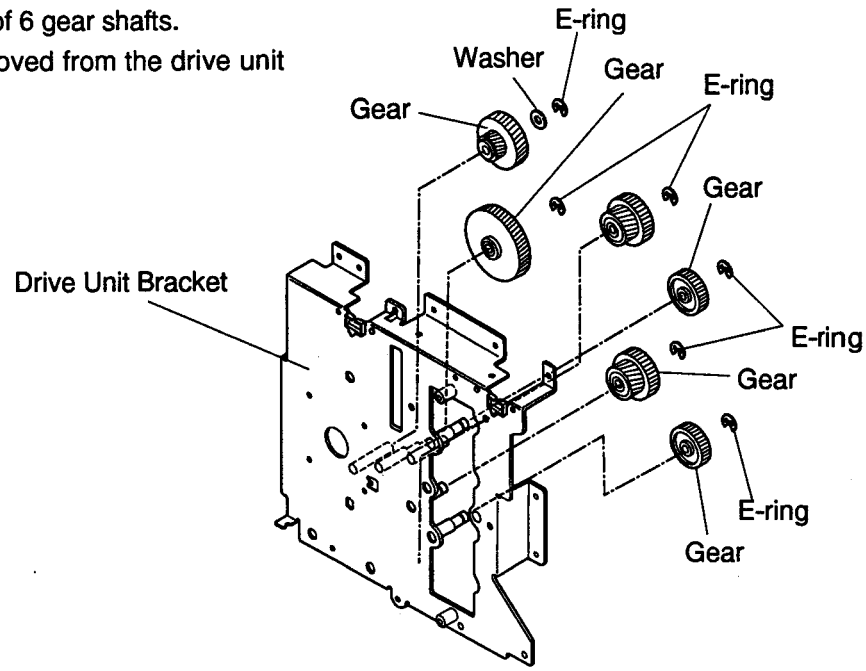
1. Disconnect the 4 connectors.
2. Remove 4 E-rings, 4 gears and 4 pins from the clutches.
3. Remove 4 E-rings from clutches, then 4 bushings.
4. Remove the 2 screws from the clutch bracket.
5. Separate the clutch bracket with the clutches from the drive unit.
6. The clutch can now be removed from the clutch bracket by removing the E-ring and cutting the cable tie.



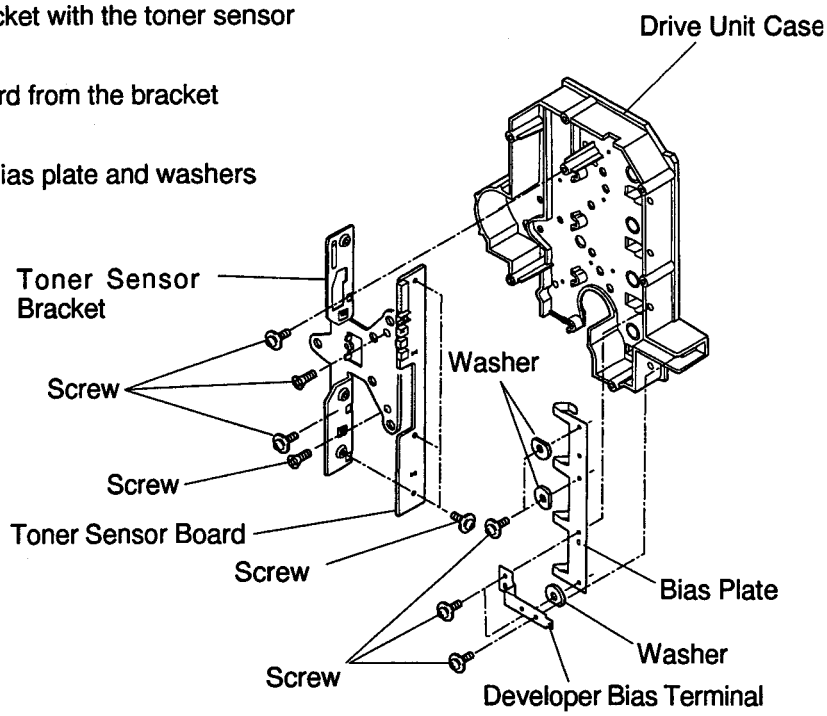
7. Remove the 6 screws from the drive unit.
8. Separate the drive unit bracket from the drive unit case.



8. Remove the E-ring from each of 6 gear shafts.
9. Each of gear can now be removed from the drive unit bracket.

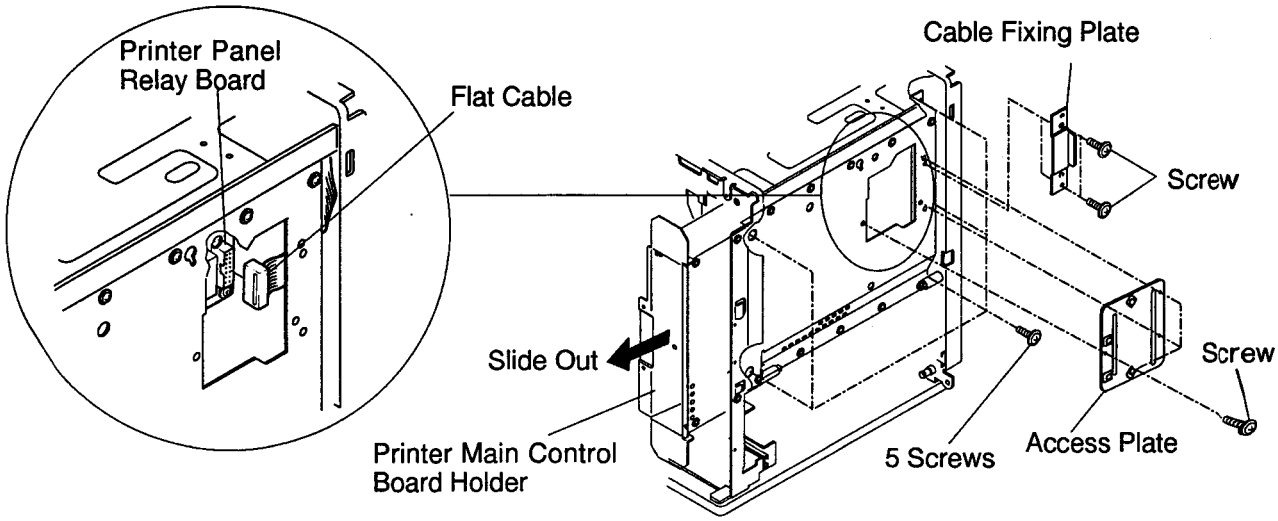


10. Remove the toner sensor bracket with the toner sensor board (4 screws).
11. Remove the toner sensor board from the bracket (3 screws).
12. Remove the developer bias, bias plate and washers (4 screws).

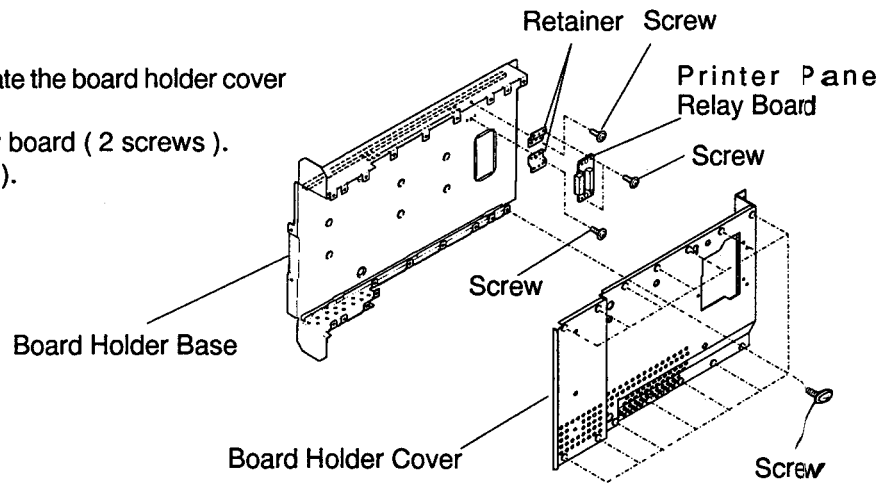


5.19 Printer Main Control Board Holder, Printer Panel Relay Board and High Voltage Board

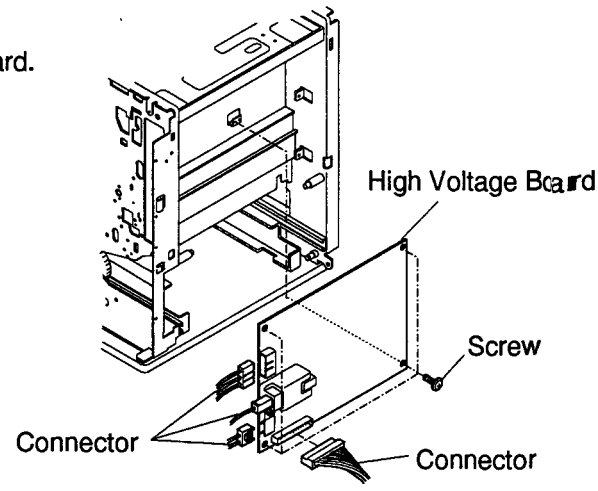
1. Remove the upper rear cover and top cover (see section 5.1).
2. Remove the engine control board shield cover (see section 5.11).
3. Open the left side door, then slide out the paper feed unit.
4. Remove the left side cover and multi-purpose tray (see section 5.2).
5. Remove the main control board (see section 5.8.1).
6. Remove the access plate from the printer main control board holder (3 screws).
7. Remove the cable fixing plate (2 screws).
8. Disconnect the flat cable from the printer panel relay board.
9. Remove the 5 screws, then slide out the printer main control board holder from the printer.



10. Remove 15 screws, then separate the board holder cover from the board holder base.
11. Remove the printer panel relay board (2 screws).
12. Remove the retainer (1 screw).



13. Disconnect the 4 connectors on the high voltage board.
14. Remove the high voltage board (4 screws).



5.20 IT Belt Cleaning Drive Gears, Cleaning Clutch Shaft Assembly, Main Motor Bracket, Imaging Unit Coupling Connector, Fuser Coupling Connector and Optional 2nd Feeder Coupling Connector

When removing the fuser coupling and optional 2nd feeder coupling connectors, the following parts must be removed.

upper rear cover and top cover (see section 5.1)
engine control board shield cover and cable cover (see section 5.11)

A. Fuser Coupling Connector

1. Disconnect the connector CN204 on the power supply unit connector CN25 on the engine control board.
2. Remove the imaging unit coupling connectors (2 screws).

B. Optional 2nd Feeder Coupling Connector

1. Disconnect the connector CN19 on the engine control board.
2. Remove the imaging unit coupling connectors (2 screws).

When removing the imaging unit coupling connector, IT belt Cleaning drive gears, cleaning clutch shaft assembly and main motor bracket, further the following parts must be removed.

engine control board with bracket and toner cartridge drive unit (see section 5.18.1)

C. Imaging Unit Coupling Connector

1. Remove the imaging unit coupling connectors (4 screws).
2. Remove the coupling connector from the bracket (2 screws).

D. IT Belt Cleaning Drive Gears

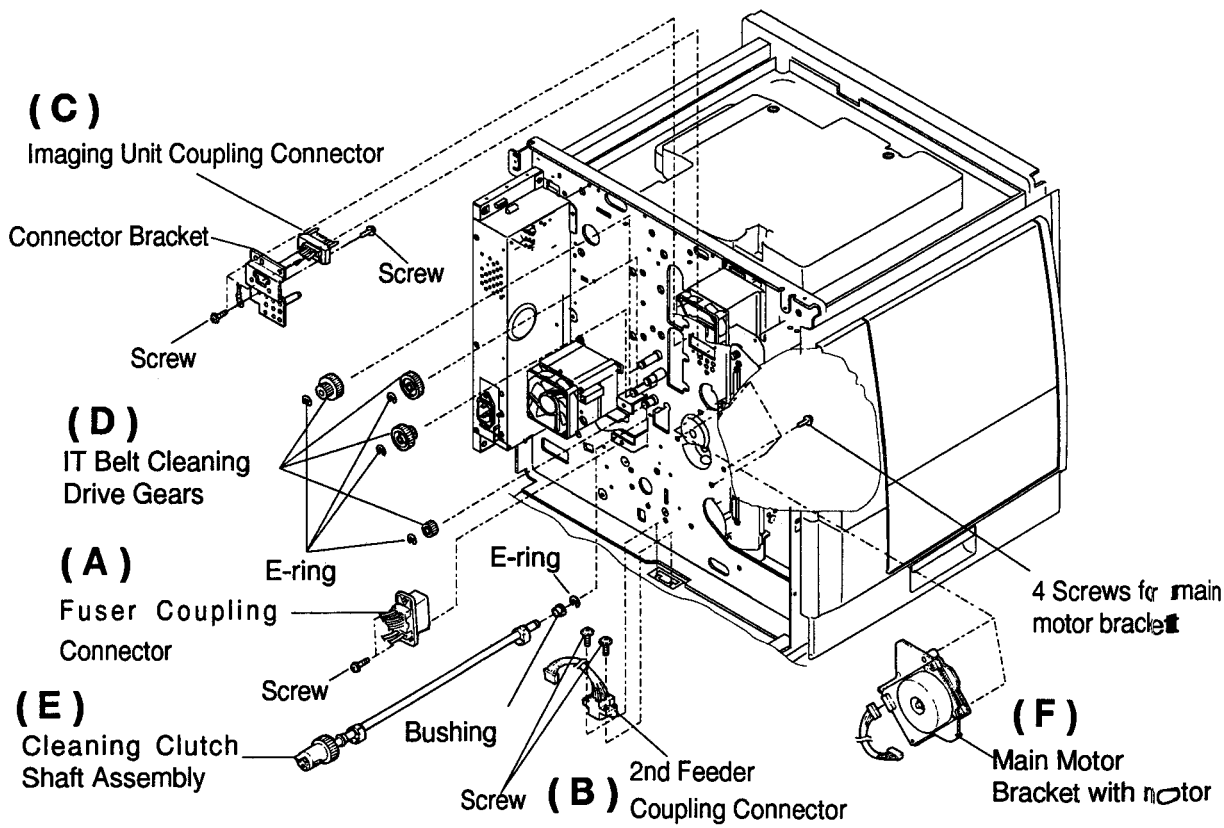
Remove the E-ring from each of IT belt cleaning drive gears and gear.

E. Cleaning Clutch Shaft Assembly

1. Open the front cover.
2. Remove the E-ring and bushing from the cleaning clutch shaft assembly.
3. Remove the cleaning clutch shaft assembly from the printer.

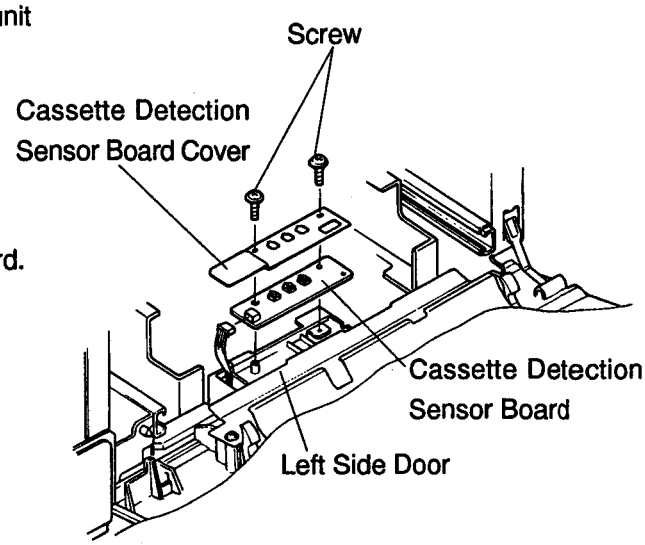
F. Main Motor Bracket

1. Open the front cover.
2. Remove the main motor bracket with the motor (4 screws).



5.21 Cassette Detection Sensor Board

1. Open the left side door, then remove the paper feed unit (see section 5.9.1).
2. If necessary, remove the left side door (see section 5.7.1).
3. Remove the cassette detection sensor board cover (2 screws).
4. Disconnect the connector CN633 on the sensor board.
5. Remove the cassette detection sensor board.



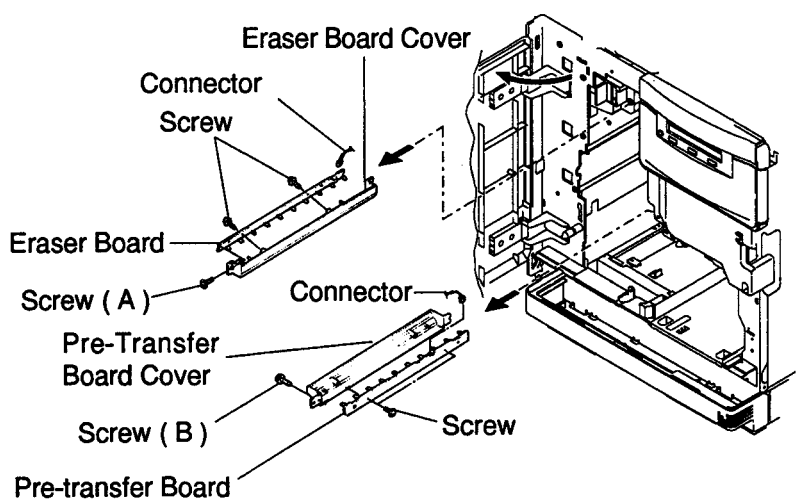
5.22 Pre-Exposure Eraser and Pre-Transfer Boards

Pre-Exposure Eraser Board

1. Open the front cover.
2. Remove the screw (A).
3. Disconnect the connector on the eraser board.
4. Remove the eraser board with eraser board cover.
5. Remove the 2 screws from the board.
6. The eraser board can now be removed from the cover.

Pre-Transfer Board

1. Open the front cover.
2. Remove the screw (B).
3. Disconnect the connector on the pre-transfer board.
4. Remove the pre-transfer board with pre-transfer board cover.
5. Remove the 2 screws from the board.
6. The pre-transfer board can now be removed from the cover.



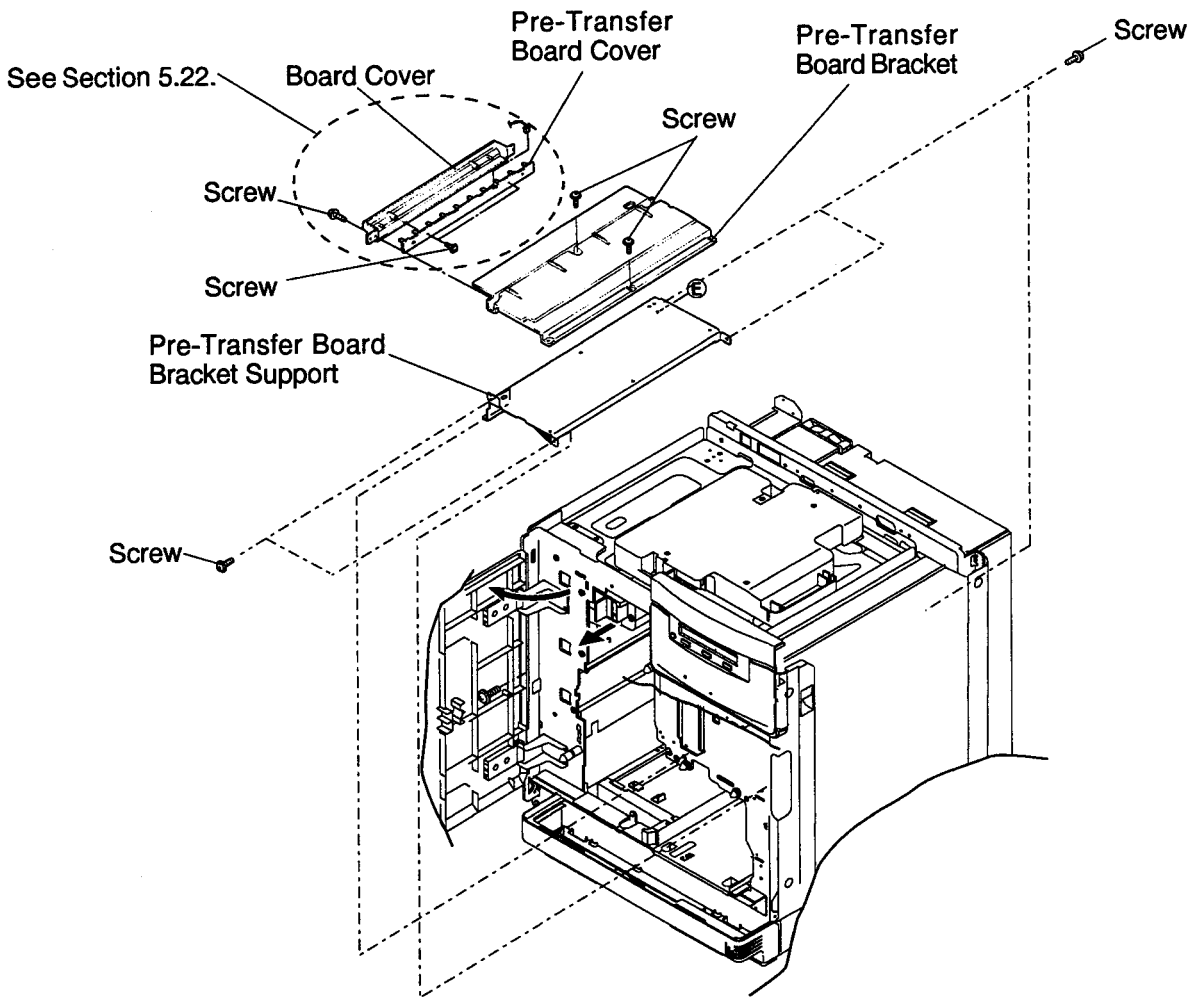
5.23 Pre-Transfer Board Bracket and Toner Cartridge Guide Rails

Remove the following parts.

a. Upper Rear and Top Covers : see section 5.1
b. Engine Control Board Shield Cover and Cable Cover : see section 5.11
c. Engine Control Board with Bracket and IT Cleaning Solenoid Board : see section 5.18.1
d. Power Supply Unit : see section 5.13.1

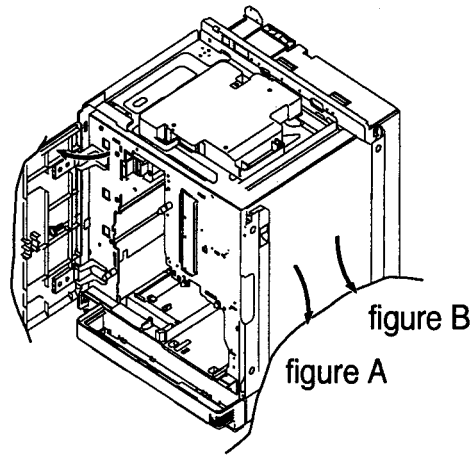
5.23.1 Pre-Transfer Board Bracket

1. Open the toner cartridge selector/paper-eject unit and front cover.
2. Remove the 4 screws and pre-transfer board bracket support plate with the board bracket.
3. Remove the 2 screws, then separate the pre-transfer board bracket from the support plate.
4. Remove the 2 screws and pre-transfer board from the board cover.

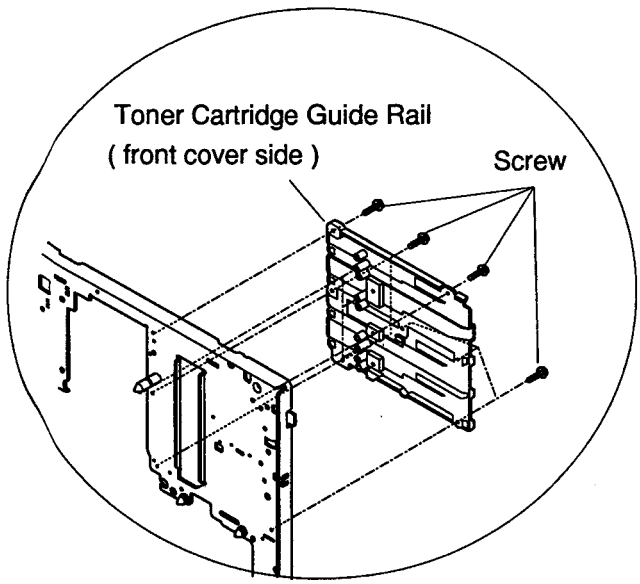


5.23.2 Toner Cartridge Guide Rails

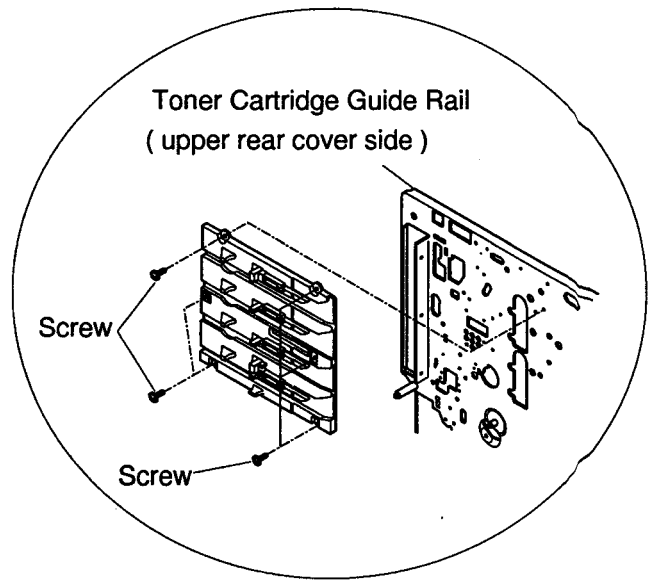
1. Remove the pre-transfer board bracket support plate with the board bracket.
2. Remove the upper rear cover side toner cartridge guide rail (6 screws) (see the figure B).
3. Remove the operation panel cover (see section 5.3).
4. Remove the toner empty sensor board (see section 5.4).
5. Remove the front cover side guide rail (7 screws) (see the figure A).



(figure A)

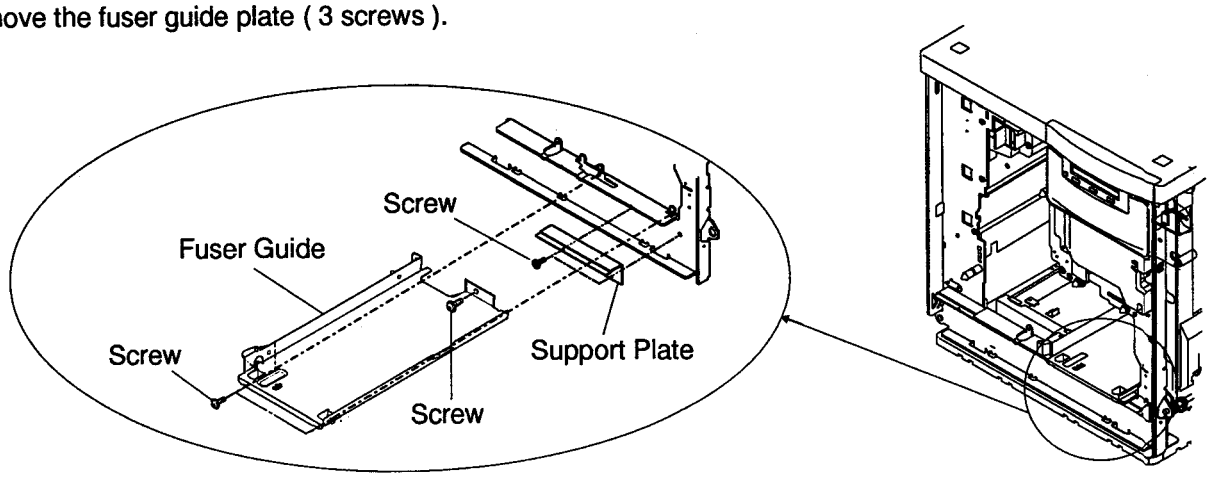


(figure B)

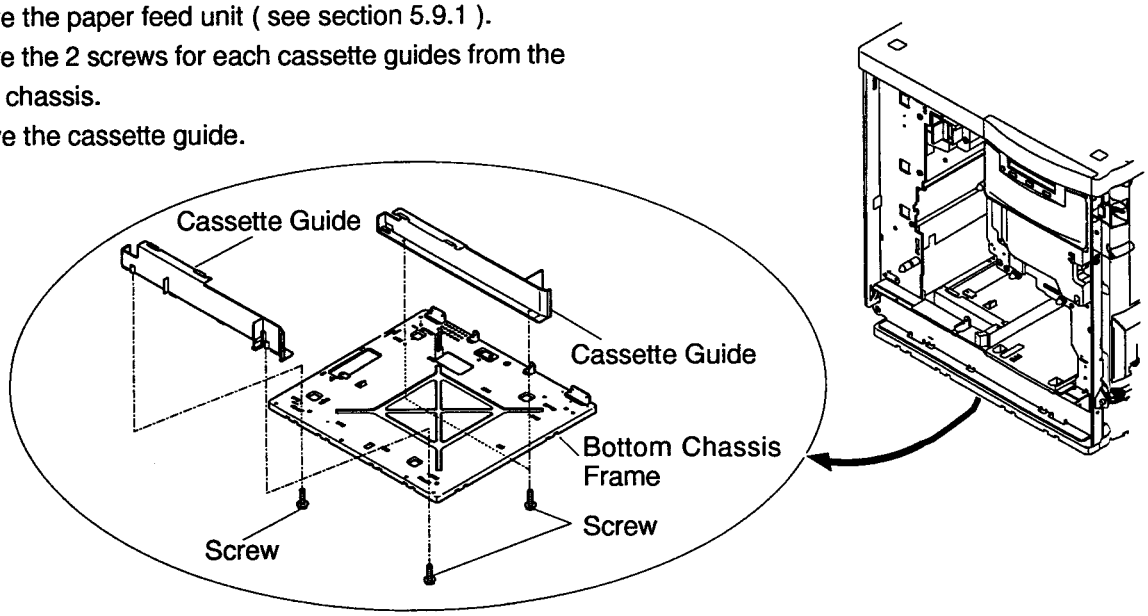


5.24 Cassette Guide, Fuser Guide Frame and Fuser/Paper Feed Unit Drive Gears

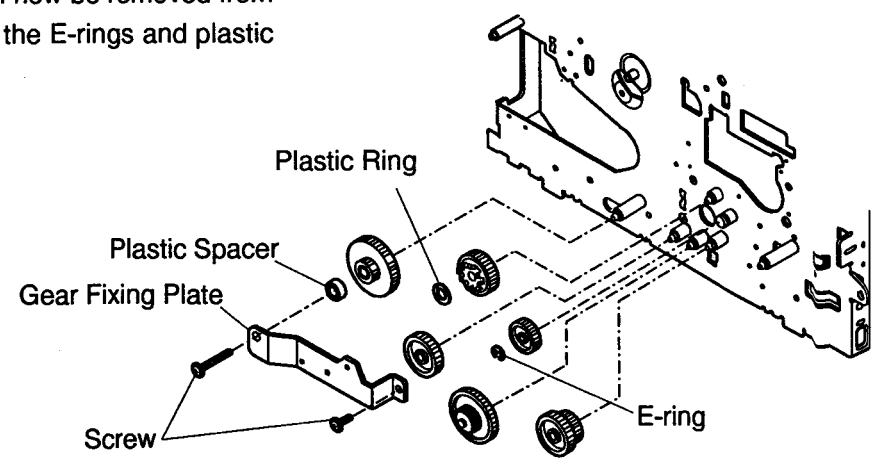
1. Open the front cover.
2. Remove the support plate (2 screws).
3. Remove the fuser guide plate (3 screws).



4. Remove the paper feed unit (see section 5.9.1).
5. Remove the 2 screws for each cassette guides from the bottom chassis.
6. Remove the cassette guide.

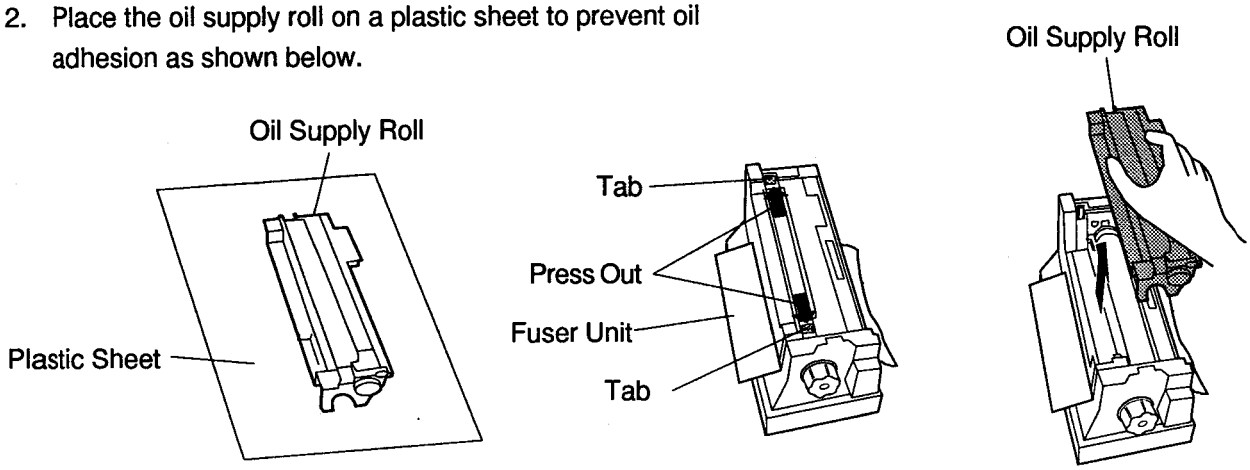


7. Remove the gear fixing plate (2 screws).
8. All gears and plastic spacer can now be removed from the chassis frame by removing the E-rings and plastic ring.



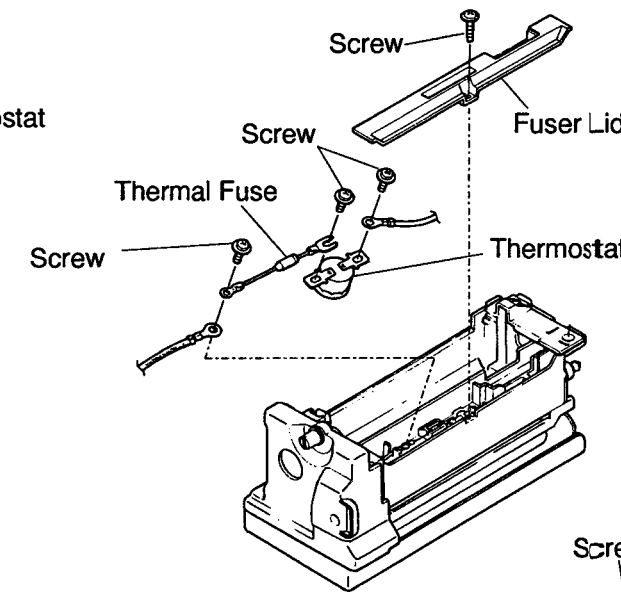
5.25 Fuser Unit Component (Heat Lamp, Thermal Fuse and Thermostat)

1. Remove the oil supply roll by pressing on the tabs to unlock the oil supply roll.
2. Place the oil supply roll on a plastic sheet to prevent oil adhesion as shown below.



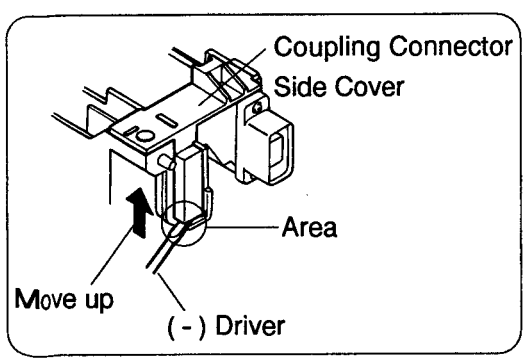
Thermal Fuse and Thermostat Removal

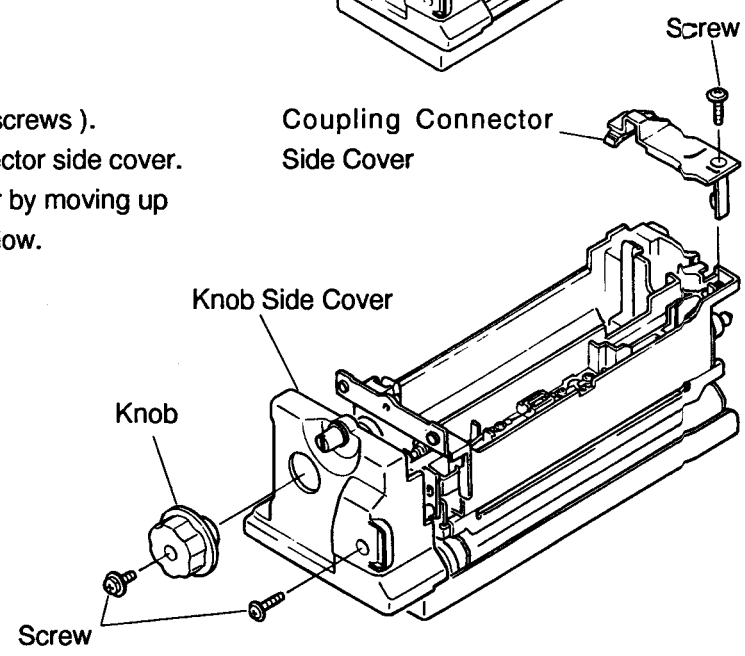
1. Remove the fuser lid (1 screw).
2. Remove the thermal fuse (2 screws), then thermostat (1 screw).



Heat Lamp Removal

1. Remove the knob and knob side cover (2 screws).
2. Remove the screw from the coupling connector side cover.
3. Separate the coupling connector side cover by moving up the area (A) using (-) driver as shown below.



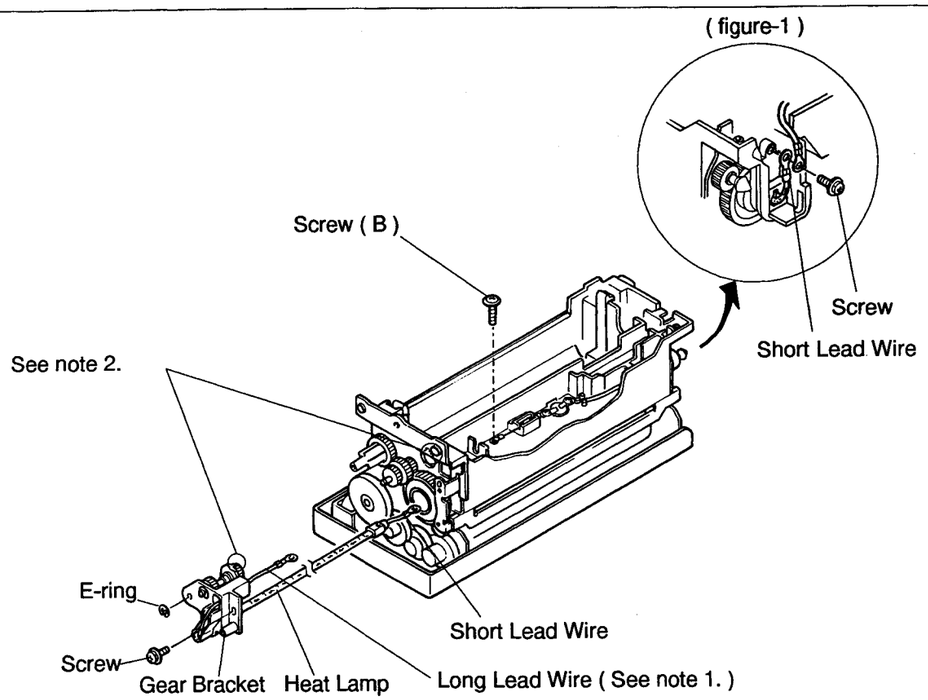


4. Remove the screw from the short lead wire (see the figure -1).
5. Remove the screw (B).
6. Remove the E-ring and screw.
7. Remove the heat lamp with the gear bracket.
8. Separate the heat lamp from the gear bracket by extracting the lead wire from the lead wire path.

Caution:

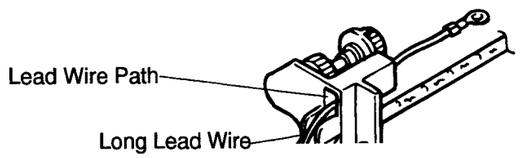
Avoid touching the heat lamp with the fingers. It may be hot and oil from your fingers will contaminate the surface.

(figure-1)



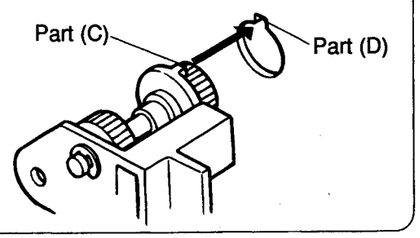
Note 1 :

The long lead wire must be routed into the lead wire path on the gear bracket as shown.



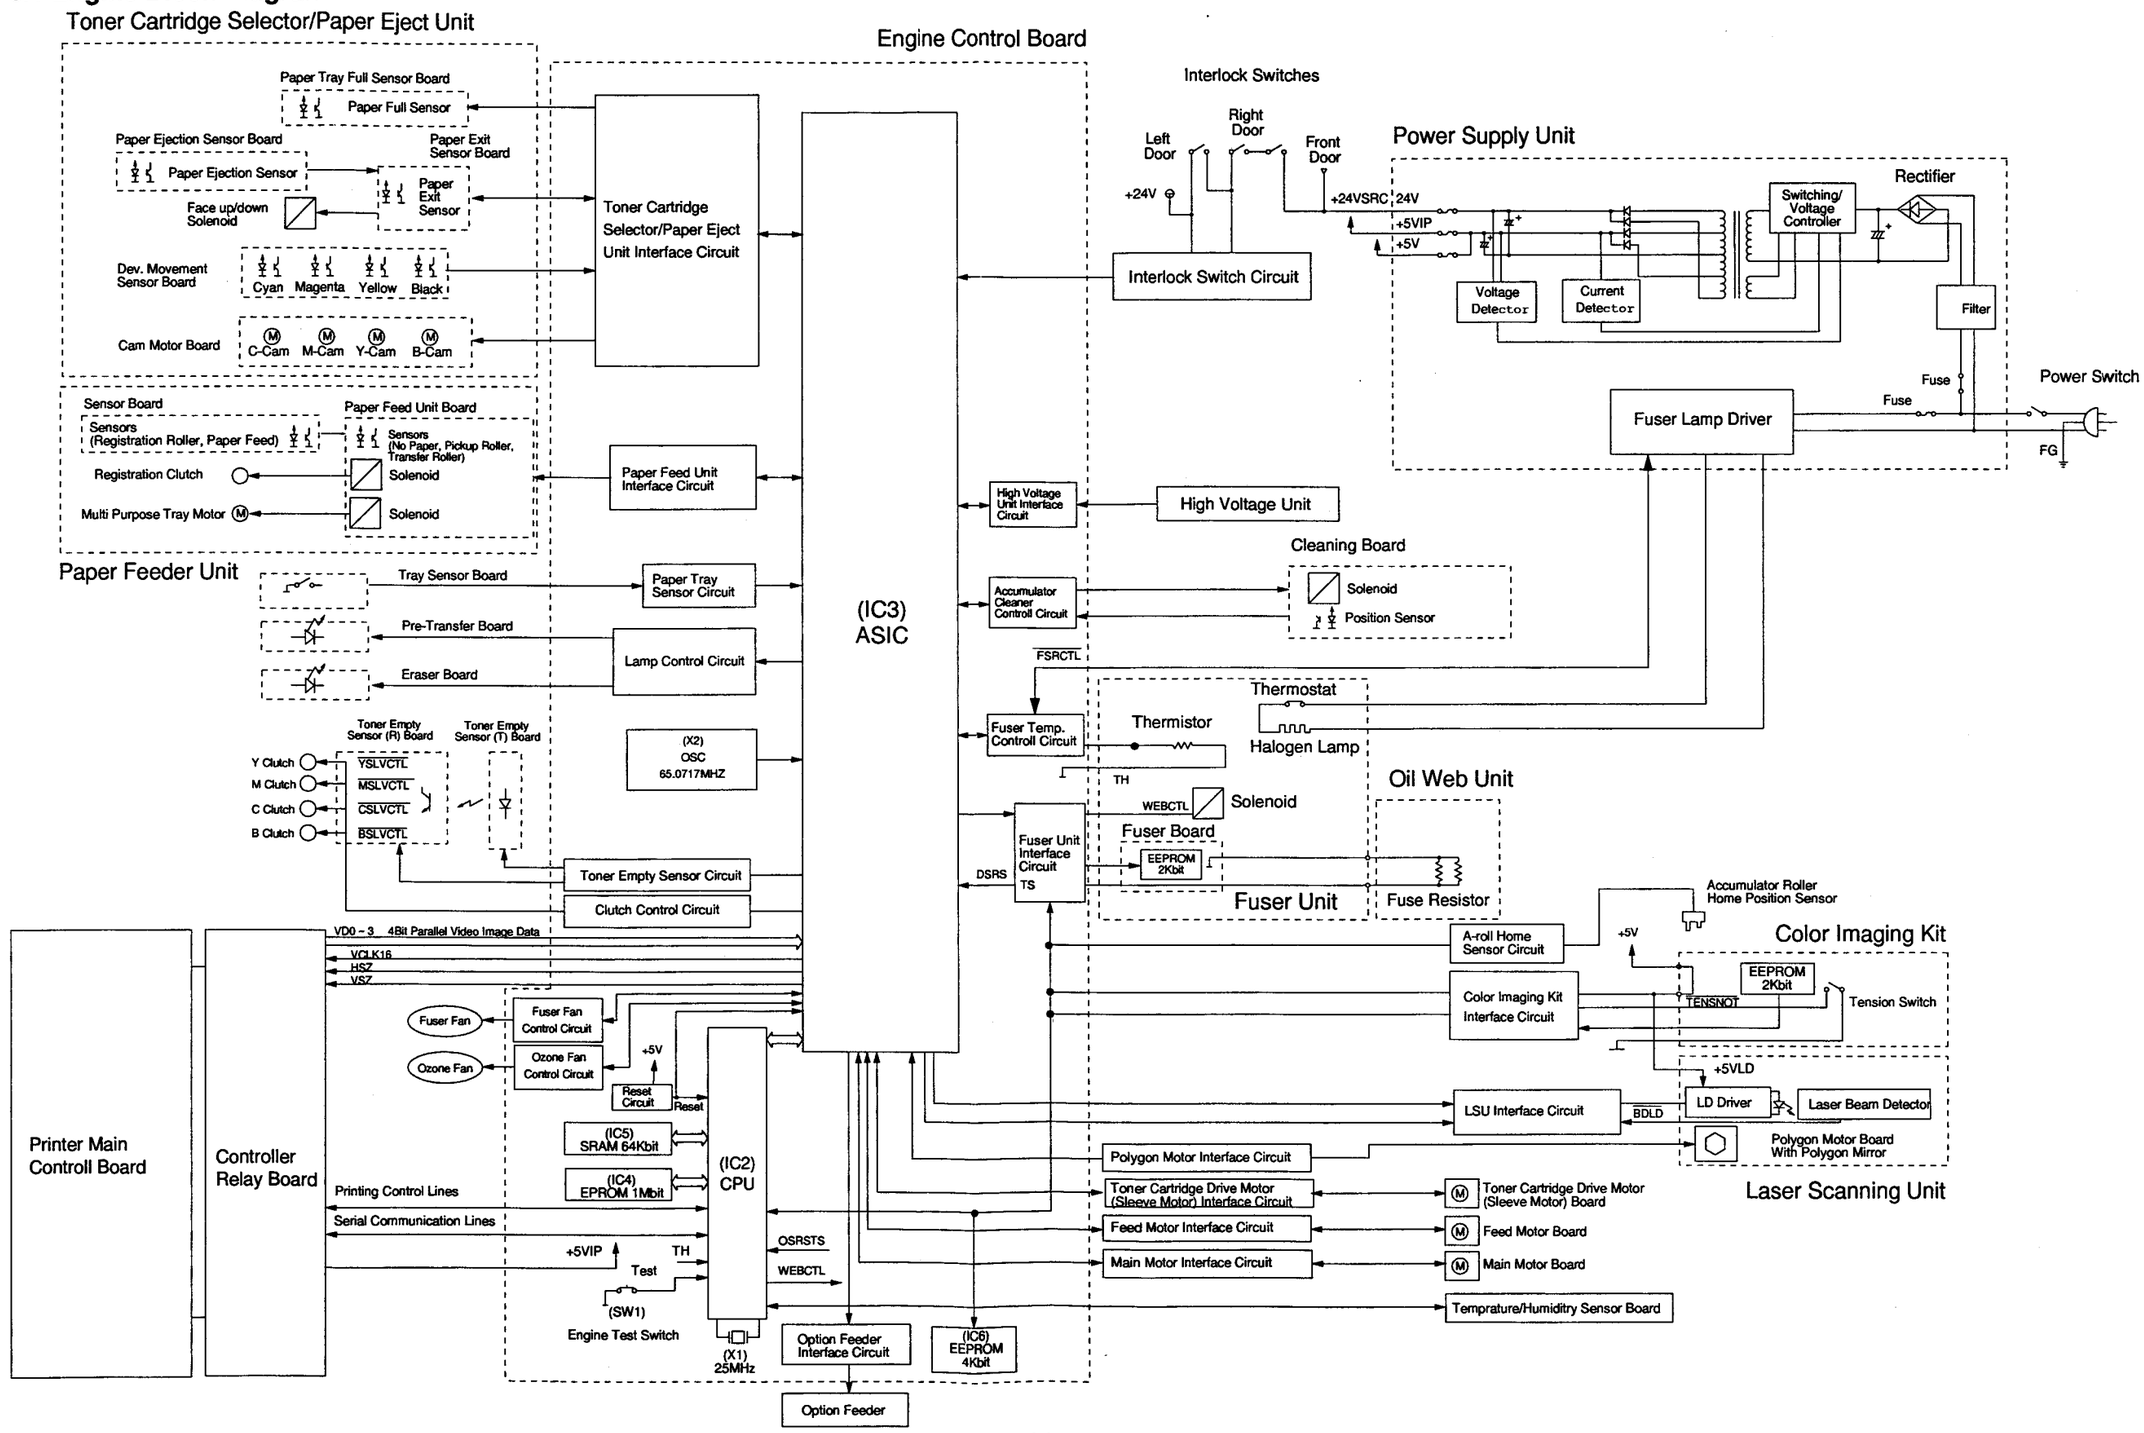
Note 2 :

The part (C) must be aligned with the part (D) on the chassis frame as shown.

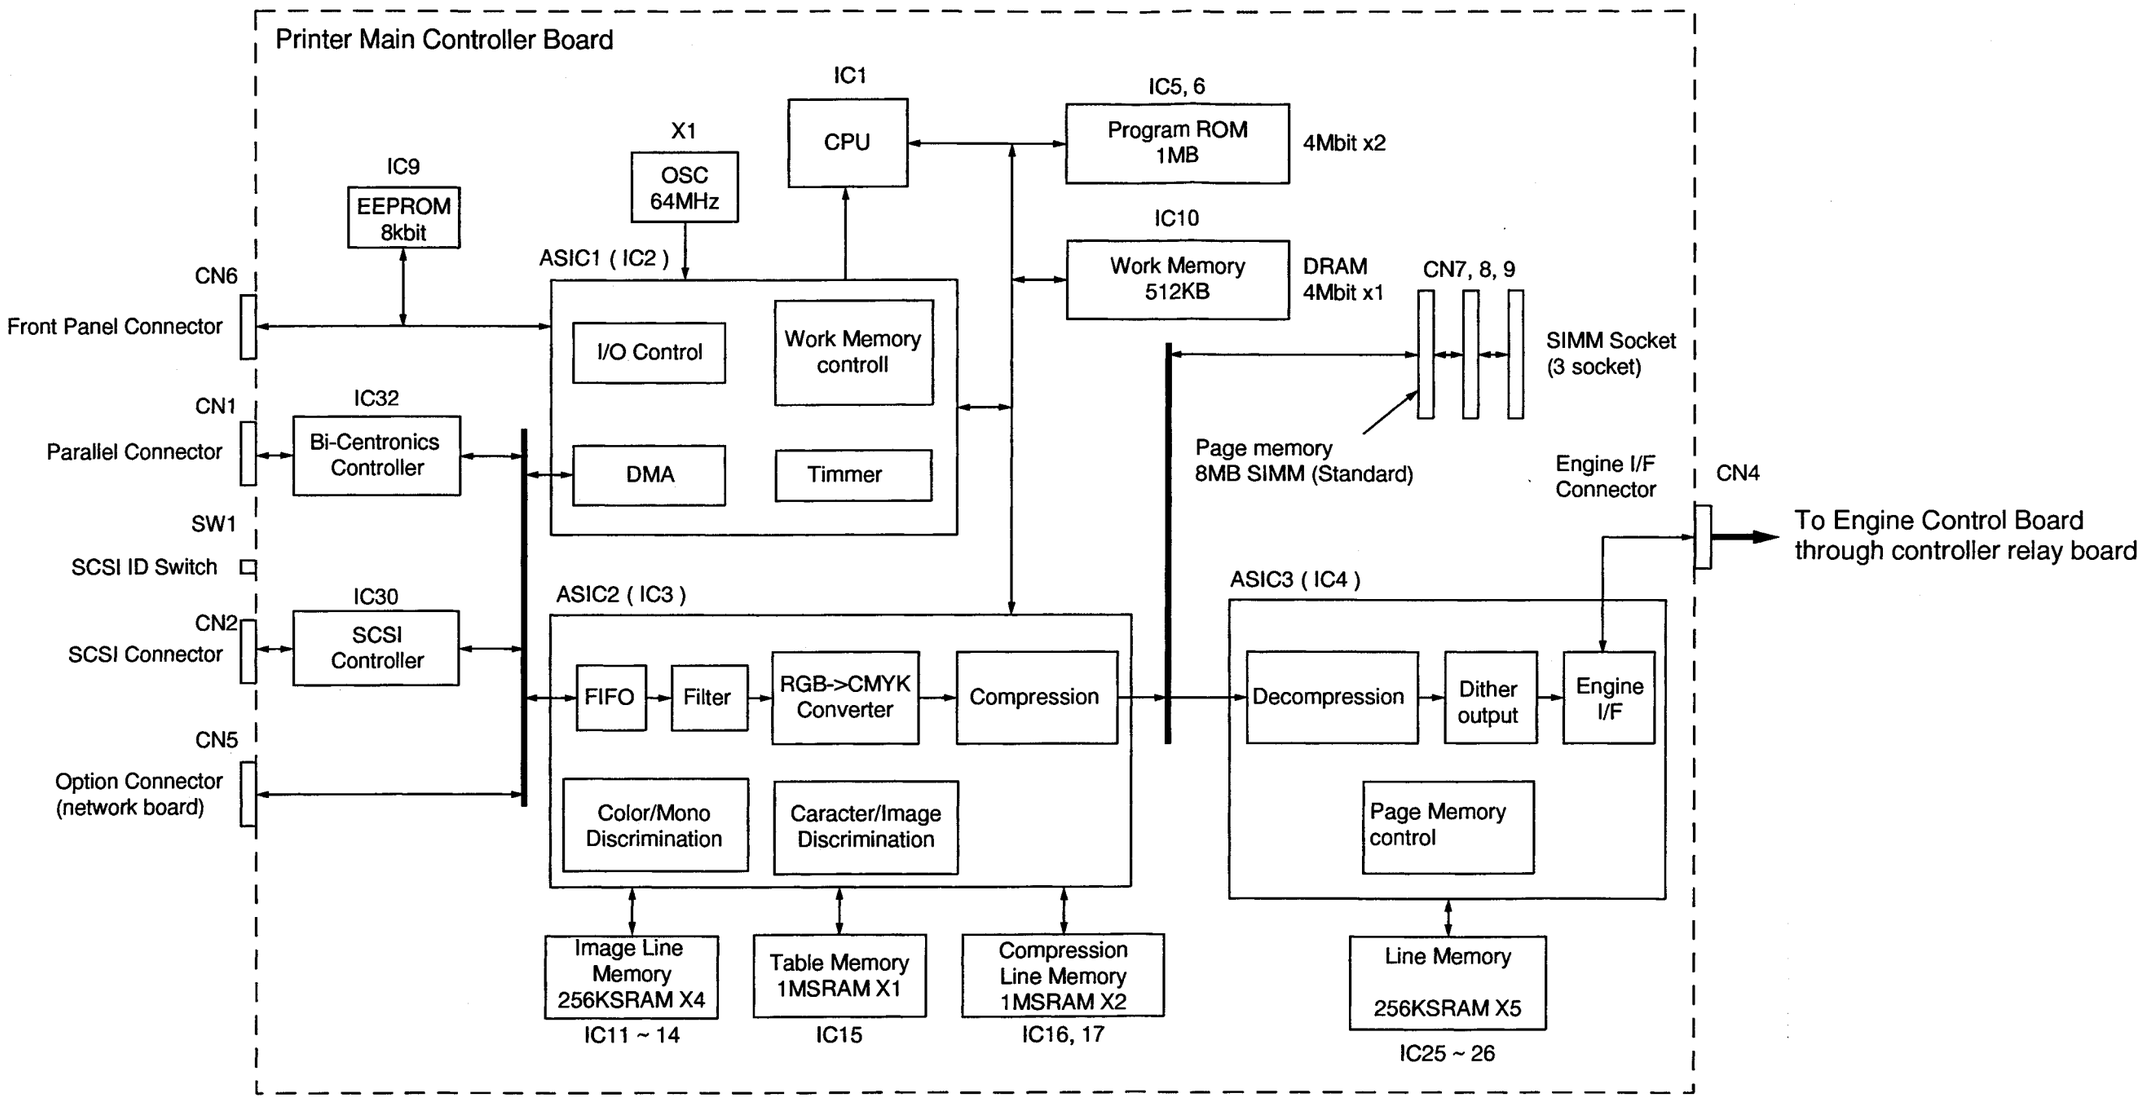


6. Electrical Circuit Description

6.1 Engine Block Diagram



6.2 Printer Main Control Board Block Diagram



6.3 General Description

6.3.1 Printer Main Control Board

The printer main control board handles SCSI and parallel data from a host computer, and ethernet data from the optional ethernet connector (network board). This board transforms the data to a format suitable for the print engine. This board is mainly comprised of IC1 (ASIC1), IC2 (ASIC2) and IC3 (ASIC3).

IC1 (ASIC1)

This IC is used for controlling the CPU, and consists of the DMA controller, CPU work memory controller, I/O controller and Timers.

IC2 (ASIC2)

This IC is used for converting image data from a host computer to color data (YMCK) suitable for the print engine, and also has the data compressing circuit. The followings are the main functions.

1) Capability of processing data at a max. 12 MB/sec. (4 M pixels/sec.)
2) 64 byte FIFO
3) Filtering function (for RGB or one color data only)
4) Image area discrimination function
5) Non-reciprocal block compression function
6) Monochrome discrimination function
7) Color conversion function
8) UCR function
9) Data packing function

IC3 (ASIC3)

This IC is used for expanding the color compressed data from IC2, controls the page memory (SIMM) and communication with the board and engine control board. The followings are the main functions

1) Page memory control functions
2) Expansion function
3) Dithering function
4) Synchronizer function for engine data timing
5) Engine interface function

6.3.2 Power Supply Unit

This board supplies DC low voltage (+5V, +5VIP, +24V) to the each board. It also supplies AC voltage to the halogen heat lamp in the fuser unit

Voltage	Supply to
+5VIP	Printer Main Control Board
+5V	Engine Control Board, Color Imaging Kit, LSU
+24V	3 Motors, 3 Fan Motors, Cams, Clutches, Solenoids, High Voltage board, Interlock Switches

6.3.3 High Voltage Power Supply Unit

This board outputs the 5 high voltages used for electronic photographic process. The 5 voltages consists of grid bias (GRID: -450 ~ -600V), charge corona (CHG : -5KV), development bias (DEV : -80 ~ -400V), FTR bias (FTR : +350 ~ +800V), STR bias (STR1 : +500 ~ +1600V, STR2 : +1300 ~ +2700V). If the signal STRSEL (pin 13, CN401) is low, STR1 is generated. If the signal STREL is high, STR2 is generated. The GRID and CHG are supplied for the scorotron charge unit. The GRID, DEV, FTR and STR voltages are varied by analog data from engine control board. Each of the high voltages are specifically set depending on the print media, selected resolution, printing mode, duplicate mode, humidity/temperature range of the room. The humidity and temperature ranges are detected by a humidity sensor.

6.3.4 Engine Control Board

This board is the core of printer engine control. It's major circuit consists of the EEPROM circuit, video interface circuit, high voltage unit interface circuit, accumulator cleaner control circuit, fuser temperature control circuit, fuser unit interface circuit, option feeder interface circuit, fuser fan control circuit, ozone fan control circuit, clutch control circuit, toner empty sensor circuit, fuser heat lamp control circuit, paper tray sensor circuit, paper feed unit interface circuit, toner cartridge selector/paper eject unit interface circuit, etc.

6.3.5 Eraser Board

This board consists of 10 LEDs and 4 resister. The light of the LED removes random negative charges from the OPC belt.

6.3.6 Pre-Transfer Board

This board consists of 10 LEDs and 4 resister. The light of the LED removes remaining negative charges from the unexposed portions of the OPC belt.

6.3.7 HSYNC Board

This board controls the horizontal synchronous signal for imaging signal to make better print quality.

6.3.8 Busy Board

This board mainly consists of a IC and controls the BUSY signal of parallel I/F for easy operating the parallel signals.

6.3.9 Sensors and Small Boards

The following table (on the next page) explains the check points and signal levels of the sensors and small boards.

Check points of the sensors and small boards

No.	Sensor Name	Signal Name	Active	Check CN No. Transistor No./Pin No.	Position	Remarks
1	Front Door Open Switch	DOPNFR	H	(Q5/1)	Front Chassis Under Front Panel	Interlock Switch
2	Toner Cartridge/Paper Eject Unit Open Switch	DOPNFR	H	(Q5/1)		
3	Left Side Door Open Switch	DOPNFR	H	(Q5/2)	Left Door Rear Side	
4	Black Toner Cartridge Level (Transmitter) Sensor	BTECTL	H	CN 5/3	Front Chassis Center (Toner Cartridge Level (Transmitter) Sensor)	LED
5	Yellow Toner Cartridge Level (Transmitter) Sensor	YTECTL	H	CN 5/4

7. Adjustment

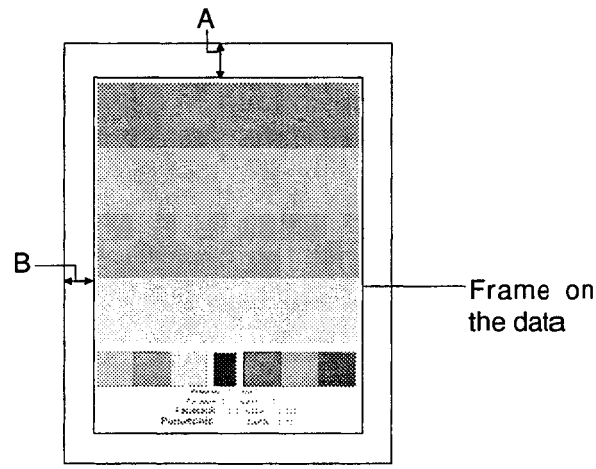
7.1 Print Position Calibration

This adjustment is used to set the print position calibration after replacing the engine control board or LSU.

1. Open data included in the Service Diskette (PJWX4PS8KM) on the PC, then send it to the printer as a test print.
2. Verify that A and B match the values in the following table.

Paper Size	
A 4	A=5mm ±0.8mm B=4.7mm ±0.8mm
Letter	A=5.5mm ±0.8mm B=3.6mm ±0.8mm

If necessary, adjust as follows.



7.1.1 Top Calibration

1. Select "Setting" on the Service Mode and press the ENTER button.
2. Select "Calibration Setting" and press the ENTER button.
3. Select "Top Calibration" and press the ENTER button.
4. Change the data using △ or ◁ button.

   A press of △ button moves the top print position by 0.04 mm. The movable distance is up to 48 mm.
5. Press the ENTER button to save the change.

7.1.2 Left Calibration

1. Select "Setting" on the Service Mode and press the ENTER button.
2. Select "Calibration Setting" and press the ENTER button.
3. Select "Left Calibration" and press the ENTER button.
4. Change the data using △ or ◁ button.

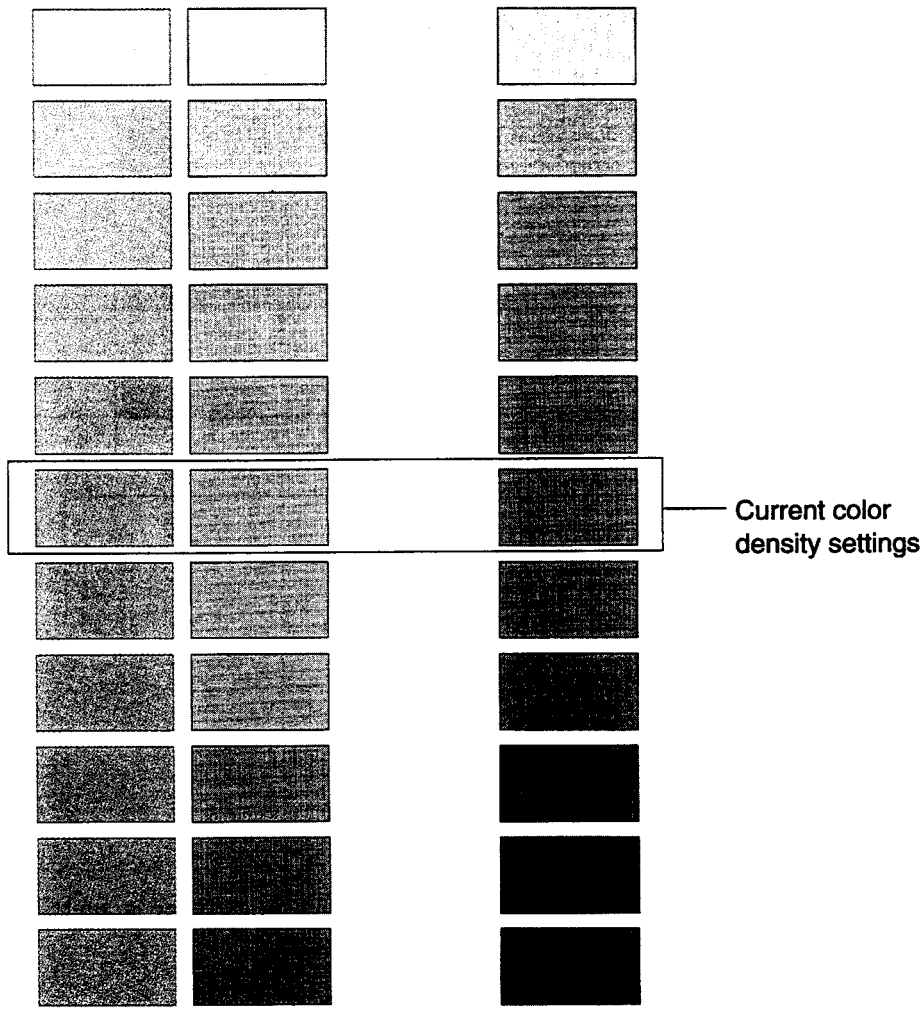
   A press of △ button moves the left print position by 0.17 mm. The movable distance is up to 40 mm.
5. Press the ENTER button to save the change.

7.2 Color Density Adjustment

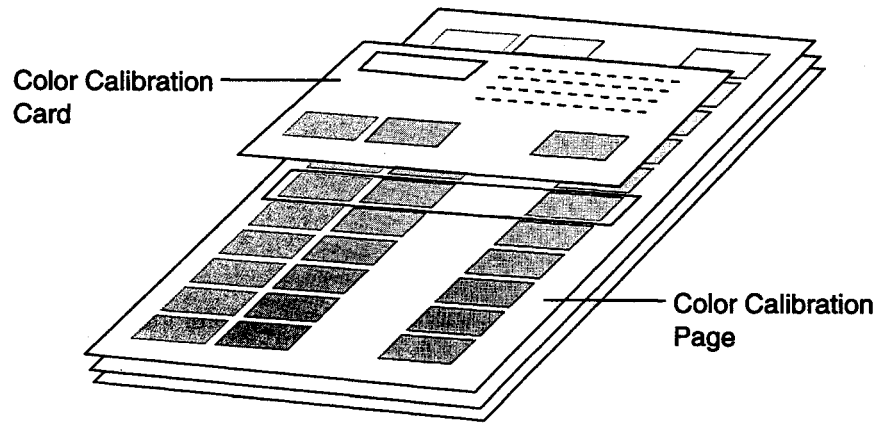
This adjustment is used to set the density of the toner applied to the media.

1. Print a Color Calibration Page using the Calibration Test Print menu in the Menu mode (see section 3.1.2).
   The current density setting for each color is indicated by the line enclosure on the Color Calibration Page as shown in the following example.
   The factory default setting for each color density is 0.

Color Calibration Page (Example)



2. Compare the current color density settings on the Color Calibration Page with the color density samples on the Color Calibration Card to see if they match.
   Place the Color Calibration Page on at least 2 sheets of clean white paper in a well-lighted area.



- If they match, then the color density adjustment is not needed and any operation can be performed.
- If they do not match go to step 3.

3. Determine which block on the Color Calibration Page most closely matches the density of the cyan sample on the Color Calibration Card.
   Repeat step 3 for each color.

4. To adjust the density for all colors simultaneously, perform the following.
   a. Select "Calibration Offset" and press the ENTER button.
   b. Press the △/◁ button to darken/lighten all the colors, then press the ENTER button.
   c. Select "Calibration Test Print" to reprint the Color Calibration Page.

5. To adjust the density for each color independently, perform the following.
   a. Select "Color Calibration" and press the △ button.
   b. Select "CYAN" and press the ENTER button.
   c. Press the △/◁ button to darken/lighten the cyan color, then press the ENTER button.
   d. Repeat instructions b and c for each color (MAGENTA, YELLOW, BLACK).
   e. Select "Calibration Test Print" to reprint the Color Calibration Page.
   The line enclosure reflects the changes made to the settings.

Notes:
- The color density setting affects the average life of toner.
- Save the Color Calibration Card for future calibrations.

8. Preventative Maintenance

8.1 General

Regularly scheduled cleaning is not necessary for this printer. However, if the printer experiences frequent media jams, clean the pickup rollers.

8.2 Recommended Tools

The Following tools are recommended.

1. Toner Vacuum Cleaner
2. Suction Bulb (air blower)
3. Cleaning water
4. Lint-free wipes
5. Cotton swabs
6. Imaging unit cover
7. Isopropyl alcohol (greater than 90% pure)

8.3 Recommended Cleaning

When performing maintenance, clean the inside of the printer according to the following.

1. Turn off the printer.

2. Remove the imaging unit.
   <<Note>>
   Whenever the imaging unit is removed, always keep it covered to prevent damage from light shock.
   Do not touch the OPC belt or accumulator belt.

3. Remove the toner cartridges, the fuser and the media tray.

4. Slide out the paper feeder.

5. Clean the accumulator belt home position sensor with a dry cotton swab.

6. Clean all printer rollers, except the second bias transfer roller, with alcohol-dampened wipes only. Never apply alcohol on the second bias transfer roller.

7. Clean the laser window with puffs of air from the suction bulb.
   Alternately, the window can be vacuumed clean.

8. Wipe off the pre-exposure lamp cover and the pre-transfer lamp cover with a lint-free wipe.

9. Vacuum the interior of the printer.

10. Carefully clean the area surrounding the second bias transfer for impacted toner.

    a. Remove the second bias transfer roller.

    b. Tap on the cleaning roller cover to knock the toner loose from that area.

    c. Vacuum the toner.

8.4 Maintenance Tables

8.4.1 User Maintenance

The following table lists the user replaceable components and the symptoms that may result when they need to be replaced.

Printer Component	Front Panel Message	Average Life*	Symptom
Toner Cartridges	"Low <Color> Toner" Change the color toner cartridge soon. "<Color> Toner Empty" Change the color toner cartridge now.	10 K pages (CMY)**	Uneven, streaky or mottled color Faded or missing color in a single color. One or more straight and even, vertical, light or dark streaks in one color.
	"Low Black Toner" Change the black toner cartridge soon. "Black Toner Empty" Change the black toner cartridge now.	12 K pages (Black)**	Uneven, streaky or mottled color Faded or missing color in a single color. One or more straight and even, vertical, light or dark streaks in one color.
Color Imaging Unit	"Imaging Unit wearing out" Change the Imaging unit soon.	Monochrome 57 K pages or Color 14.25 K pages	Dark vertical streaks on the print Dark color spots and streaks in all colors. A wide, light, horizontal band in one place on the page All colors are faded; fine line detail disappears.
	"Imaging Unit Worn out" Change the Imaging unit now.	Monochrome 60 K pages or Color 15 K pages	
Fuser Unit***	"Fuser Unit wearing out" "Oil Roll wearing out" (These messages are displayed alternately.) Change the Fuser unit soon.	28.5 K pages	———
	"Fuser Unit and Oil Roll Worn out" Change the Fuser unit now.	31 K pages	
Oil Supply Roll	"Oil Roll wearing out" Change the Oil supply roll soon.	15 K pages	———
	"Oil Roll Worn out" Change the Oil supply now.	15.5 K pages	
Transfer Unit	"Transfer wearing out" Change the Transfer unit soon.	80 K pages	———

Notes : * These figures are based on an average of 5% coverage of the printable area and standard density for any one color.
The frequency of replacement will vary, depending on the complexity of the prints and the percentage of coverage and print density.
When printing at the High Density, after "Low <Color> Toner" or "Low Black Toner" is displayed, a faded print may occur before "<Color> Toner Empty" or "Black Toner Empty" is displayed.

** The starter cartridges shipped with the printer have an average life of approximately 3,000 pages, based on an average of 5% coverage.

*** Transparencies, coated paper and other specialty media will result in shortened consumable life.
Replace the oil supply roll along with the fuser unit. Do not use the old one.

8.4.2 Service Maintenance

8.4.2.1 Recommended Maintenance Cycle

Item	Maintenance Cycle	Type of Maintenance
Paper Feed Unit Pickup Roller Paper Feed Roller	approximately 40,000 pages	Clean
Imaging Unit Charge Corona*	approximately 10,000 full color pages or approximately 40,000 images	Clean
Main Unit Belt Home Sensor** Pre-exposure Lamp cover** Pre-transfer Lamp cover**	approximately 15,000 full color pages or approximately 60,000 images	Clean

* The charge corona is housed within the imaging unit. Under normal operation the charge corona may require cleaning only once during the life of the imaging unit.
Use a cotton swab to clean the tungsten wire that runs the length of the charge corona.
** Cleaning is recommended when replacing the imaging unit.

8.4.2.2 Lubrication

Lubricate the following parts when they are replaced or cleaned:

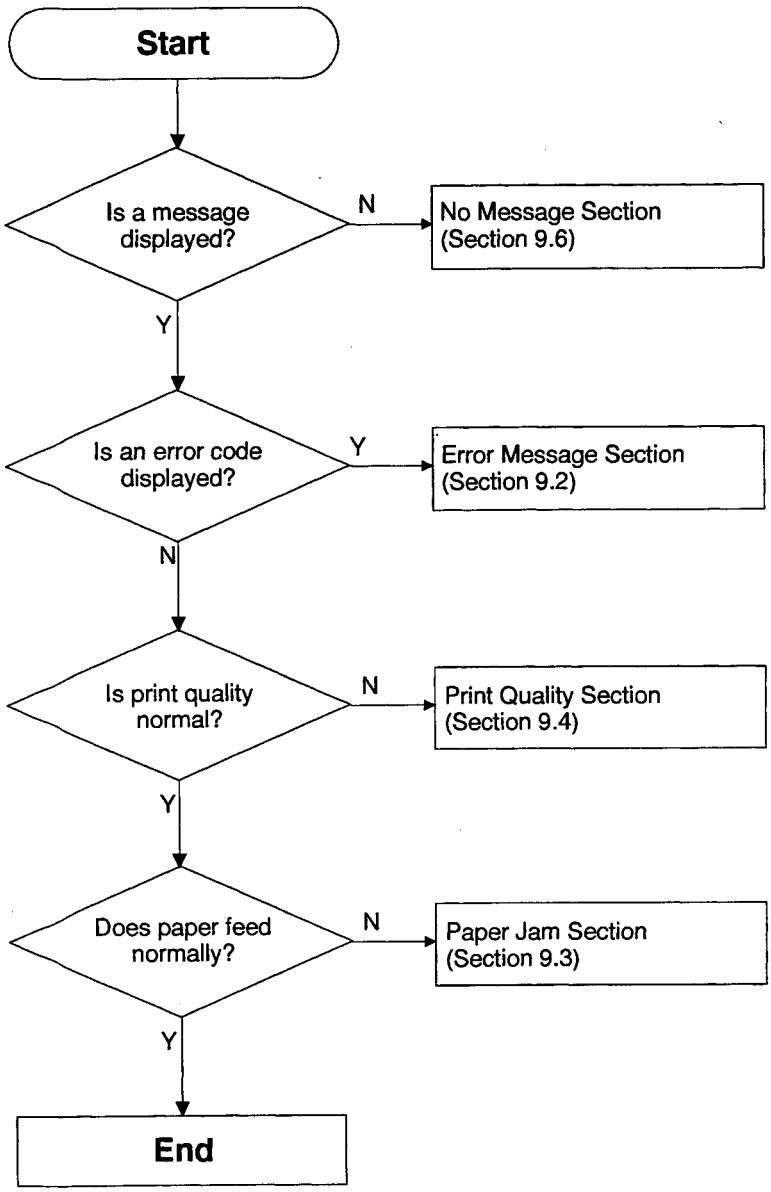
Area	Part	Lubricant part number	Type of lubricant
Paper Feeder	Gear Shafts	PJOL-K1879	Grease
Toner Cartridge Selector	Cam Gears and Cam Shafts	PJOL-PG671	Grease
Toner Cartridge Drive Unit	Gears Bias Plate (A)	PJOL-SG3451 PJOL-GE676	Grease Grease*
Main Chassis	Gears and Gear Shafts STR HV Terminal Gear Shafts	PJOL-HP500 PJOL-GE676 PJOL-SG3451	Grease Grease* Grease

* Electrically conductive grease

Refer to the parts list illustrations for the locations to be lubricated.

9 Troubleshooting

9.1 Initial Troubleshooting Flowchart



9.2 Error Messages

The printer indicates error conditions using the ON and blinking states of the ERROR indicator. When the ERROR indicator is lit in red, it shows call service error status. When it is blinking, it shows user correctable error status.

9.2.1 User Errors

LCD Display	Possible Cause	Recovery
Front or Right door Open	Front or right side door is open.	Close the front or right side door.
Left side door Open	Left side door is open.	Close the left side door.
Lower Left side door Open	Optional cassette side door is open.	Close the optional cassette side door.
Upper Left side door Open	Standard cassette side door is open.	Close the left side door.
Black Toner Cartridge Not installed	Black toner cartridge is not installed.	Install the black toner cartridge.
Cyan Toner Cartridge Not installed	Cyan toner cartridge is not installed.	Install the cyan toner cartridge.
Magenta Toner Cartridge Not installed	Magenta toner cartridge is not installed.	Install the magenta toner cartridge.
Yellow Toner Cartridge Not installed	Yellow toner cartridge is not installed.	Install the yellow toner cartridge.
Imaging Unit Not installed	Imaging unit is not installed.	Install the imaging unit.
Fuser Unit Not installed	Fuser unit is not installed.	Install the fuser unit.
Paper feeder Not installed	Paper feeder is not installed.	Install the paper feeder.
Oil Roll Not installed	Oil supply roll is not installed.	Install the oil supply roll.
Imaging Unit No tension	Imaging unit is not installed correctly.	Install the imaging unit correctly.
Charger Not installed	Charger is not installed.	Install the charger.
All Media Tray missing or empty	All media trays are missing or empty.	Install a media tray with media in it.
Media Tray Empty	Media tray is missing or empty.	Install the media tray with media in it.
Upper Tray Empty	Media tray is empty.	Install media in the upper media tray.
Middle Tray Empty	Middle tray is empty in the 2nd cassette feeder option.	Install the media in the middle media tray.
Lower Tray Empty	Lower tray is empty in the 2nd cassette feeder option.	Install the media in the lower media tray.
Multi-Purpose Tray Empty	Multi-purpose tray is empty.	Install media in the multi-purpose tray.
Paper Tray Empty	No media tray is installed or media tray is empty.	Install a media tray with paper in it.
Transparency Tray Empty	No media tray is installed or media tray is empty.	Install a media tray with transparencies in it.
Output Tray Full	Output tray is full.	Remove the printed media from the output tray.
SIMM Check Error	Controller Optional SIMM check error.	Call for service
SCSI error	Communication cannot be established with the computer.	Connect the SCSI cable correctly.
Ethernet Card Check Error	Printer Ethernet Card I/F Error.	Install the Ethernet Card correctly.
Imaging Unit Worn out	Imaging unit is worn out.	Replace the imaging unit now.
Imaging Unit wearing out	Imaging unit is wearing out.	Replace the imaging unit soon.
Transfer wearing out	Second transfer roller is wearing out.	Replace the transfer roller soon.

LCD Display	Possible Cause	Recovery
Fuser Unit and Oil Roll Worn out	Fuser is worn out.	Replace the fuser unit now.
Fuser Unit wearing out	Fuser is wearing out.	Replace the fuser unit soon.
Oil Roll Worn out	Oil supply roll is worn out.	Replace the oil supply roll now.
Oil Roll wearing out	Oil supply roll is wearing out.	Replace the oil supply roll soon.
Black Toner Empty	Black toner cartridge is empty.	Replace the black toner cartridge now.
Cyan Toner Empty	Cyan toner cartridge is empty.	Replace the cyan toner cartridge now.
Magenta Toner Empty	Magenta toner cartridge is empty.	Replace the magenta toner cartridge now.
Yellow Toner Empty	Yellow toner cartridge is empty.	Replace the yellow toner cartridge now.
Low Black Toner	Black toner cartridge is almost empty.	Replace the black toner cartridge soon.
Low Cyan Toner	Cyan toner cartridge is almost empty.	Replace the cyan toner cartridge soon.
Low Magenta Toner	Magenta toner cartridge is almost empty.	Replace the magenta toner cartridge soon.
Low Yellow Toner	Yellow toner cartridge is almost empty.	Replace the yellow toner cartridge soon.
Too hot to print Label Remove Label, Cancel job	Printer is too hot or room temperature is too high to print Labels.	Wait until the printer cools down, or use in a cooler place [below 32.5°C (90.5°F)].

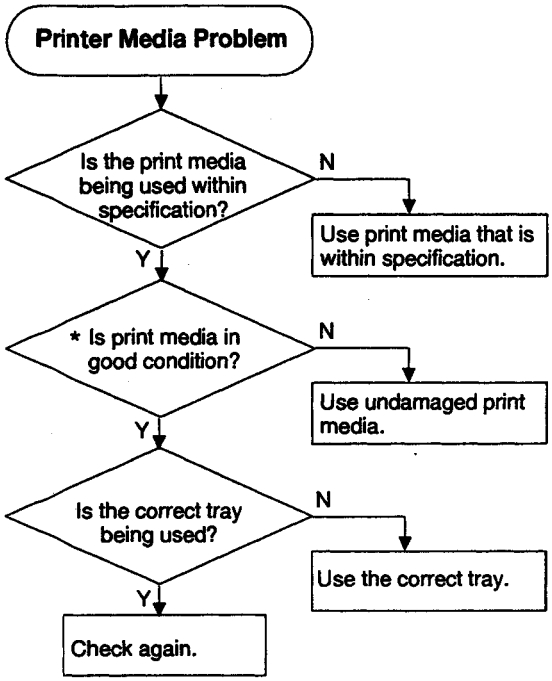
9.2.2 Call Service Codes

LCD Display	Printer Status	Possible Cause	Recovery
Printer Error 01	The dev. unit did not reach contact position or home position within 1 sec.	Black developing unit movement error	See Section 9.5.1.
Printer Error 02	The dev. unit did not reach contact position or home position within 1 sec.	Cyan developing unit movement error	See Section 9.5.1.
Printer Error 03	The dev. unit did not reach contact position or home position within 1 sec.	Magenta developing unit movement error	See Section 9.5.1.
Printer Error 04	The dev. unit did not reach contact position or home position within 1 sec.	Yellow developing unit movement error	See Section 9.5.1.
Printer Error 05	Fuser/Toner Cartridge fan is not rotating at normal speed.	Fuser/Toner Cartridge fan error	See Section 9.5.2.
Printer Error 10	Polygon motor is not phase-locked and is not rotating at normal speed.	Polygon motor unlocked	See Section 9.5.3.
Printer Error 12	L-Sync signal is not detected after APC (Auto Power Control).	L-Sync over	See Section 9.5.3.
Printer Error 13	Irregular L-Sync signal is detected.	L-Sync short	See Section 9.5.3.
Printer Error 20	1. Main charger Arc discharge of contact has occurred. 2. DEV,FTR,STR bias Short circuit of contact voltage has occurred.	Charger error	See Section 9.5.4.
Printer Error 21	OPC home and IT home are not synchronous.	OPC asynchronous with intermediate transfer unit	See Section 9.5.5.
Printer Error 22	OPC home is not detected within 4.5 sec. during rotation of main motor.	Position error of the OPC unit	See Section 9.5.6.
Printer Error 30	IT home is not detected within 0.7 sec. during rotation of main motor.	Position error of the intermediate transfer unit	See Section 9.5.7.
Printer Error 32	The cleaning blade did not reached to non-cleaning position or cleaning position within 0.7 sec.	Cleaning blade movement error	See Section 9.5.8.
Printer Error 33	The media transfer roller did not reach to transfer position or home position within 0.9 sec.	Media transfer roller movement error	See Section 9.5.9.
Printer Error 41	Fuser temperature is over 210°C.	High temperature error	See Section 9.5.10.
Printer Error 42	Fuser thermistor is disconnected.	Thermistor open error	See Section 9.5.11.
Printer Error 43	Fuser temperature does not reach 100°C within 200sec,160℃ within 500sec during warming up, or it is less than 120℃ during standby, and it does not return to set temperature within 100sec after a low temperature error occurred during printing.	Temperature rising error	See Section 9.5.12.
Printer Error 50	Power supply fan is not rotating at normal speed.	Power supply fan error	See Section 9.5.13.
Printer Error 51	Ozone fan is not rotating at normal speed.	Ozone fan error	See Section 9.5.14.
Printer Error 61	Toner Cartridge Drive motor (sleeve motor) is not phase-locked and is not rotating at normal speed.	Toner Cartridge Drive motor (sleeve motor) unlocked	See Section 9.5.15.
Printer Error 62	Paper feed motor is not phase-locked and is not rotating at normal speed.	Paper feed motor unlocked	See Section 9.5.16.
Printer Error 63	Main motor is not phase-locked and is not rotating at normal speed.	Main motor unlocked	See Section 9.5.17.

LCD Display	Printer Status	Possible Cause	Recovery
Printer Error 64	Multi-Purpose Pickup Roller movement error occurred	Multi-Purpose Pickup Roller movement error	See Section 9.5.18.
Printer Error 70	Engine Program ROM checksum error	Engine Program ROM checksum error	See Section 9.5.19.
Printer Error 71	Engine SRAM check error	Engine SRAM check error	See Section 9.5.20.
Printer Error 72	Engine EEPROM check error. Printing is continued.	Engine EEPROM check error	See Section 9.5.21.
Printer Error 73	Parity error occurs or no response comes back from engine.	Engine communication Error	See Section 9.5.22.
Printer Error 74	VIDEO VSZ or VCLK signal is not detected.	VSYNC time-out	See Section 9.5.23.
Printer Error 75	VIDEO PPRDY signal is not detected within 800ms, when ESM signal turned on.	Power missing error	See Section 9.5.24.
Printer Error 76	EEPROM (Imaging unit) check error	EEPROM (Imaging unit) Error	See Section 9.5.25.
Printer Error 77	EEPROM (Fuser unit) check error	EEPROM (Fuser unit) Error	See Section 9.5.26.
Printer Error 80	Controller program ROM checksum error has occurred at power on	Controller Program ROM checksum error	See Section 9.5.27.
Printer Error 81	Controller work RAM check error has occurred at power on	Controller work RAM check error	See Section 9.5.28.
Printer Error 87	Controller ASIC# 2 Error	Controller ASIC# 2 Error	See Section 9.5.29.
Printer Error 88	Controller ASIC# 3 Error	Controller ASIC# 3 Error	See Section 9.5.30.
Printer Error 90	Read/Write error of controller EEPROM has occurred. Printing is continued.	Controller EEPROM check error	See Section 9.5.31.
Printer Error 91	Controller CPU Error.	Controller CPU error	See Section 9.5.32.
Printer Error 92	Printer SCSI controller (53cf96) Error.	Printer SCSI controller (53cf96) Error	See Section 9.5.33.
Printer Error 94	Printer parallel I/F controller (cd1283) Error	Printer parallel I/F controller (cd1283) Error	See Section 9.5.34.
Printer Error 95	Printer Panel Error	Printer Panel Error	See Section 9.5.35.
Ethernet Card Check Error	Ethernet Card I/F Error	Ethernet Card I/F Error	See Section 9.5.37.
Check Error SIMM	Controller SIMM check error has occurred at power on	Controller SIMM check error	See Section 9.5.36.
SCSI Error	SCSI Error	Can not establish the connection to the Computer by SCSI.	See Section 9.5.38.
Memory Overflow	Memory overflow has occurred.	Print data is larger than the capacity of the memory installed.	See Section 9.5.39.

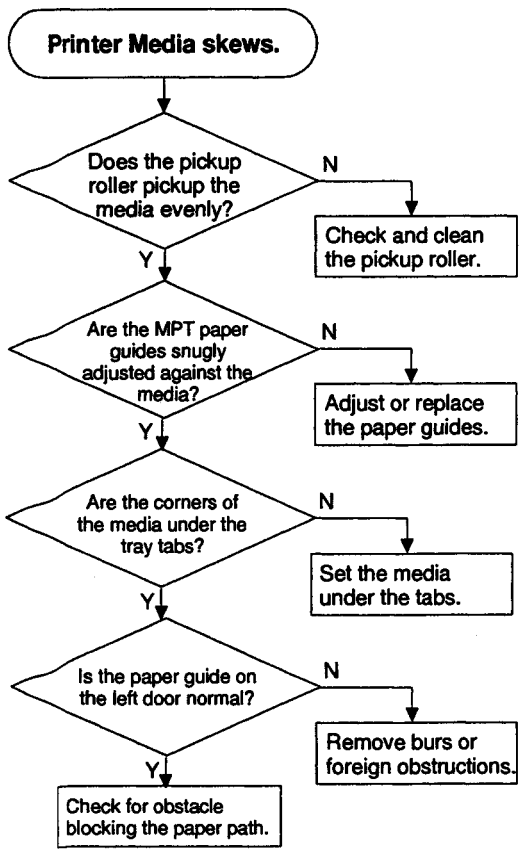
9.3 Jam

9.3.1 Print Media Problem

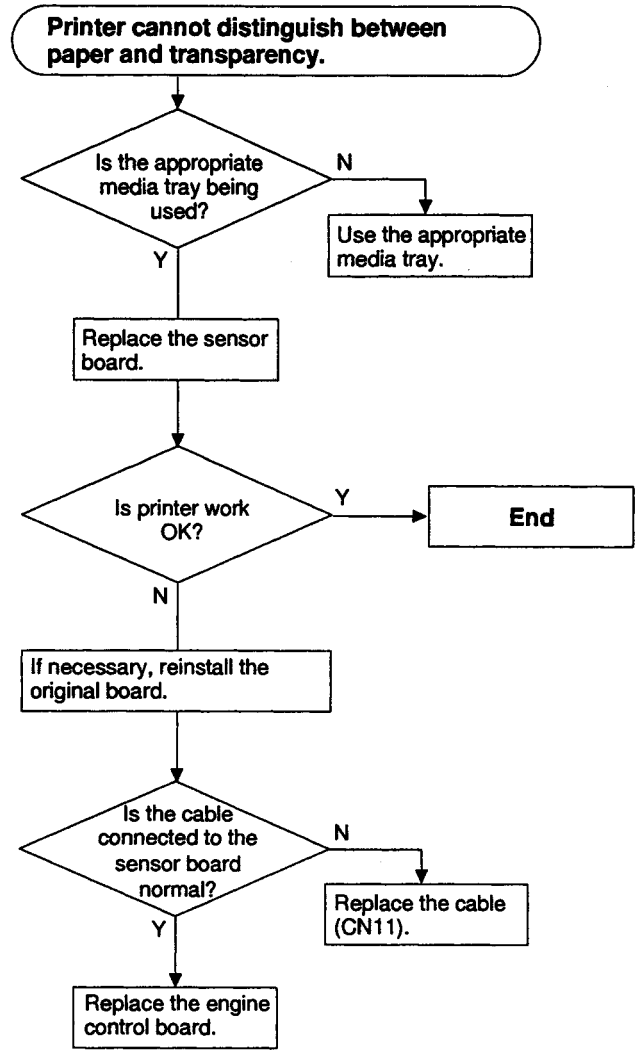


*Inspect the print media for bent, torn or folded corners etc.

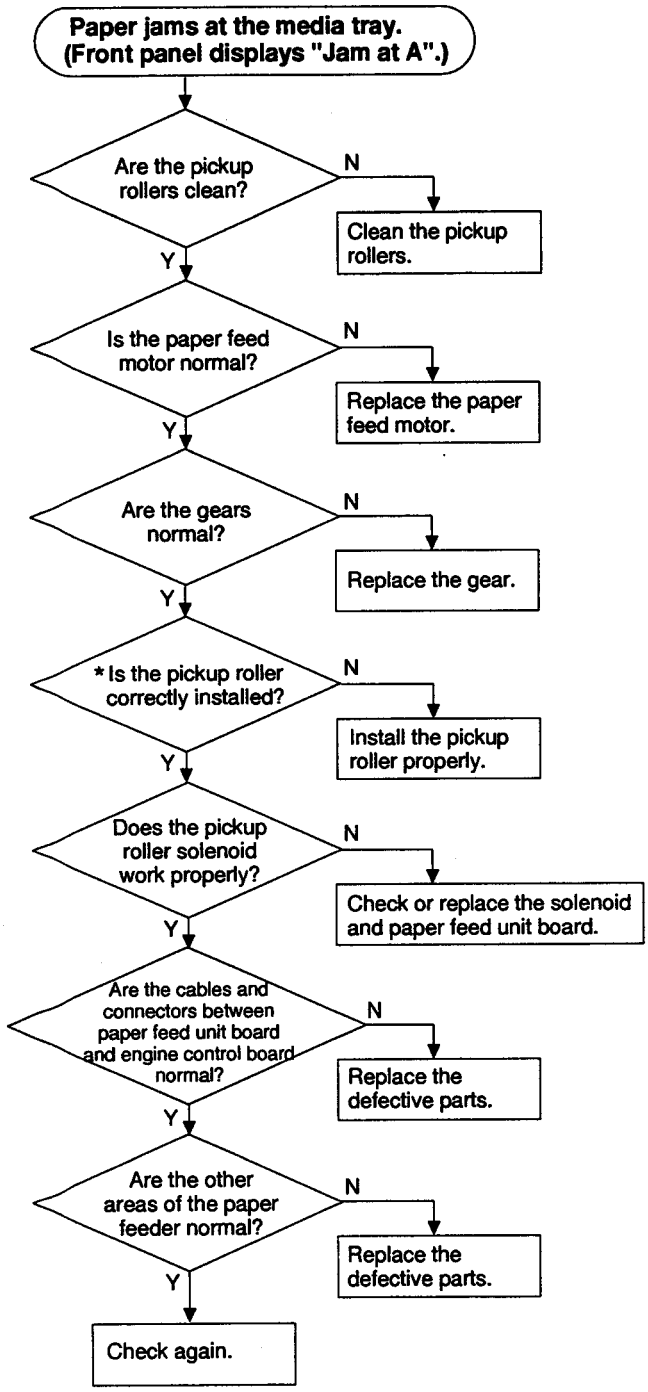
9.3.2 Print Media skews.



9.3.3 Printer cannot distinguish between paper and transparency.

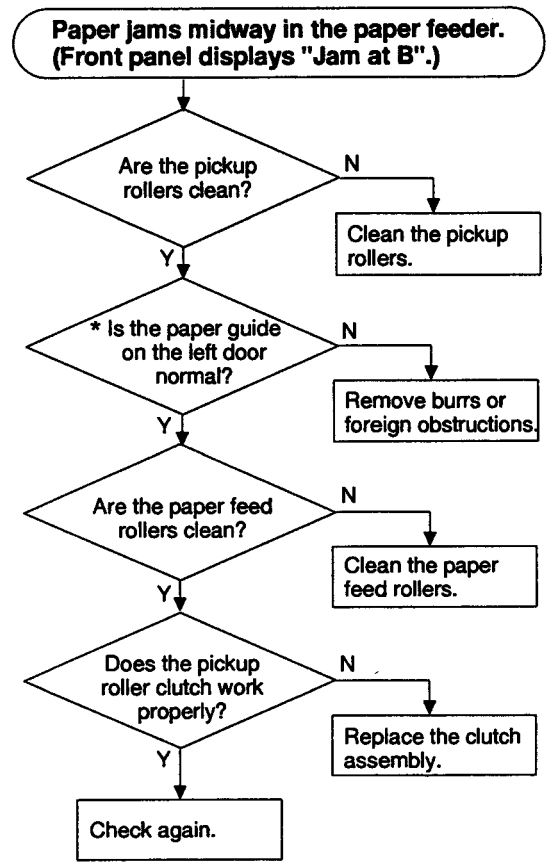


9.3.4 Paper jams at the media tray.



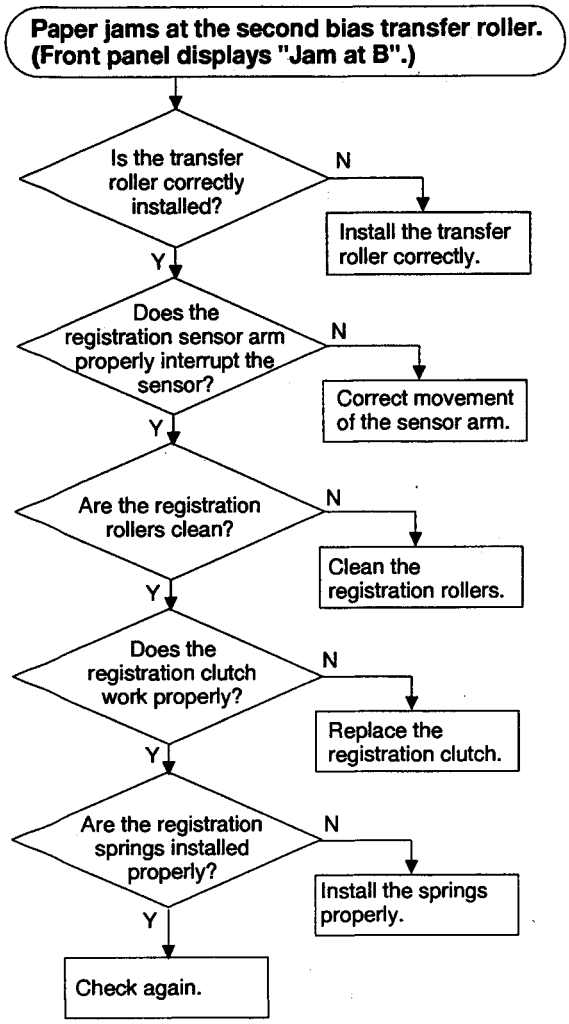
* Flat side of the cam-shaped pickup rollers face down prior to pick a sheet of paper.

9.3.5 Paper jams midway in the paper feeder.

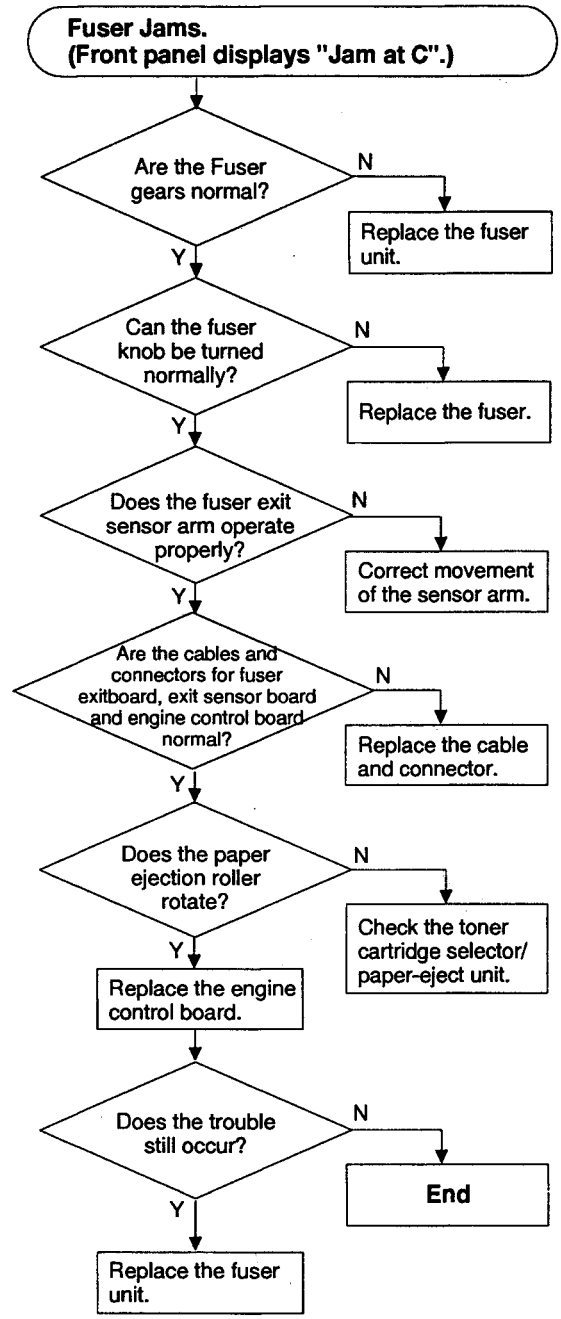


* Check for burrs or foreign obstructions.

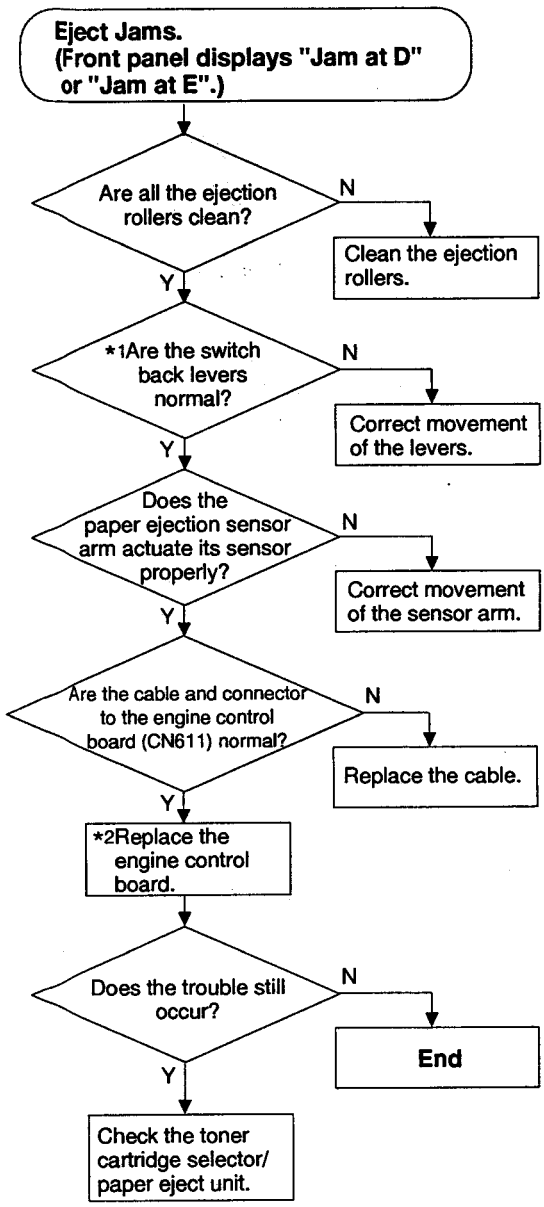
9.3.6 Paper jams at the second bias transfer roller.



9.3.7 Fuser Jams

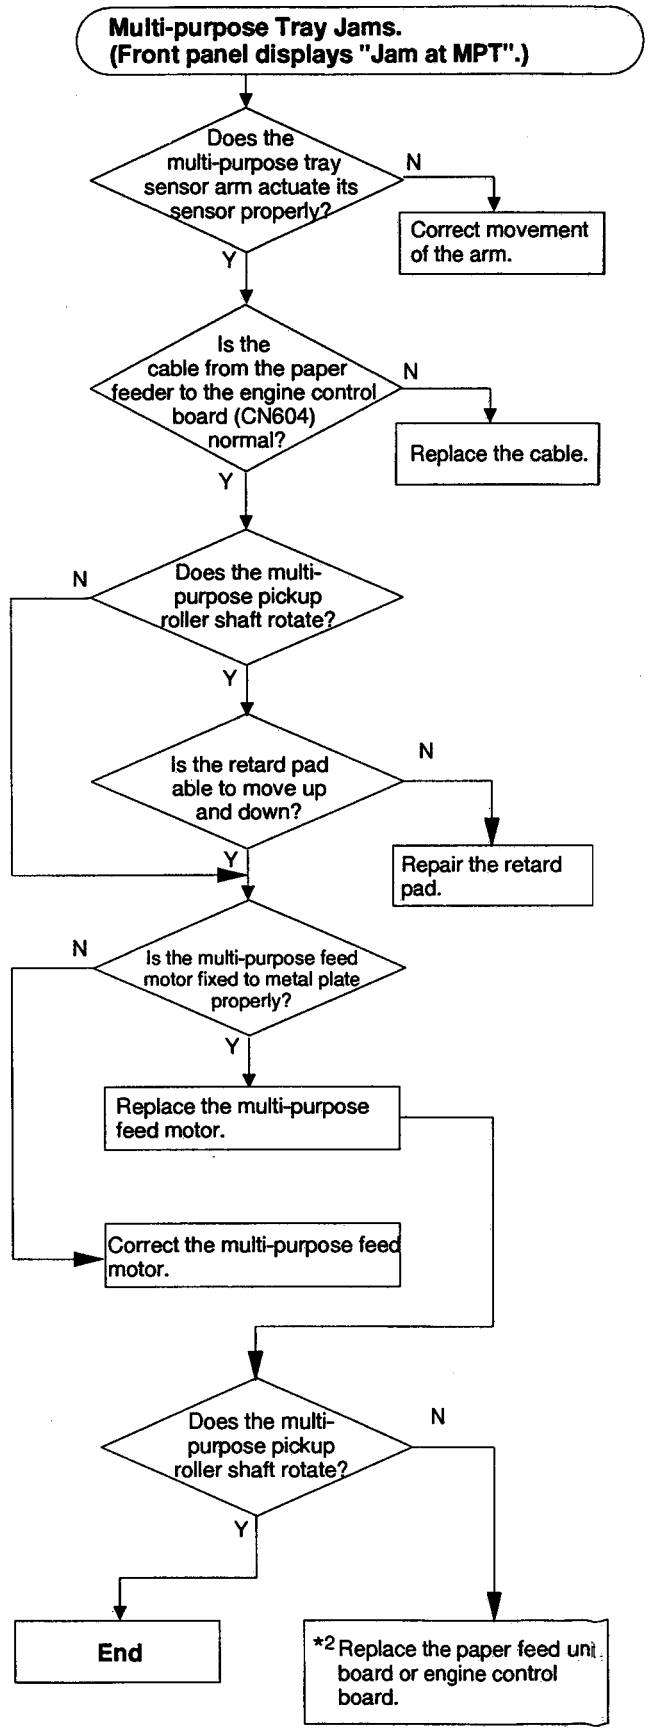


9.3.8 Eject Jams



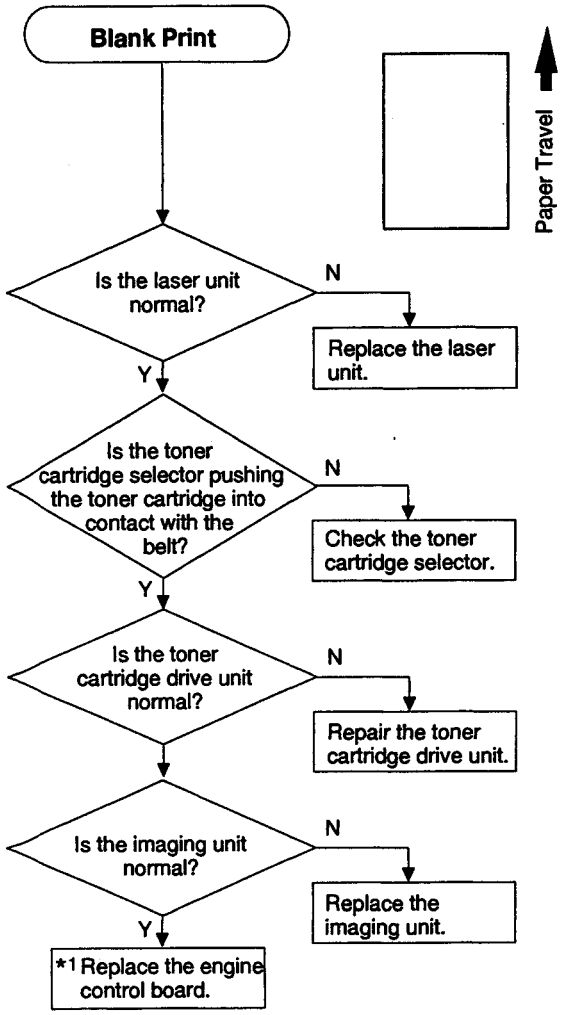
*1 Ensure that the levers are not bent and do not interfere with paper movement.
*2 When replacing the engine control board, remove EEP ROM (IC6) from the original engine control board and install it on the new engine control board.

9.3.9 Multi-purpose Tray Jams



9.4 Print Quality

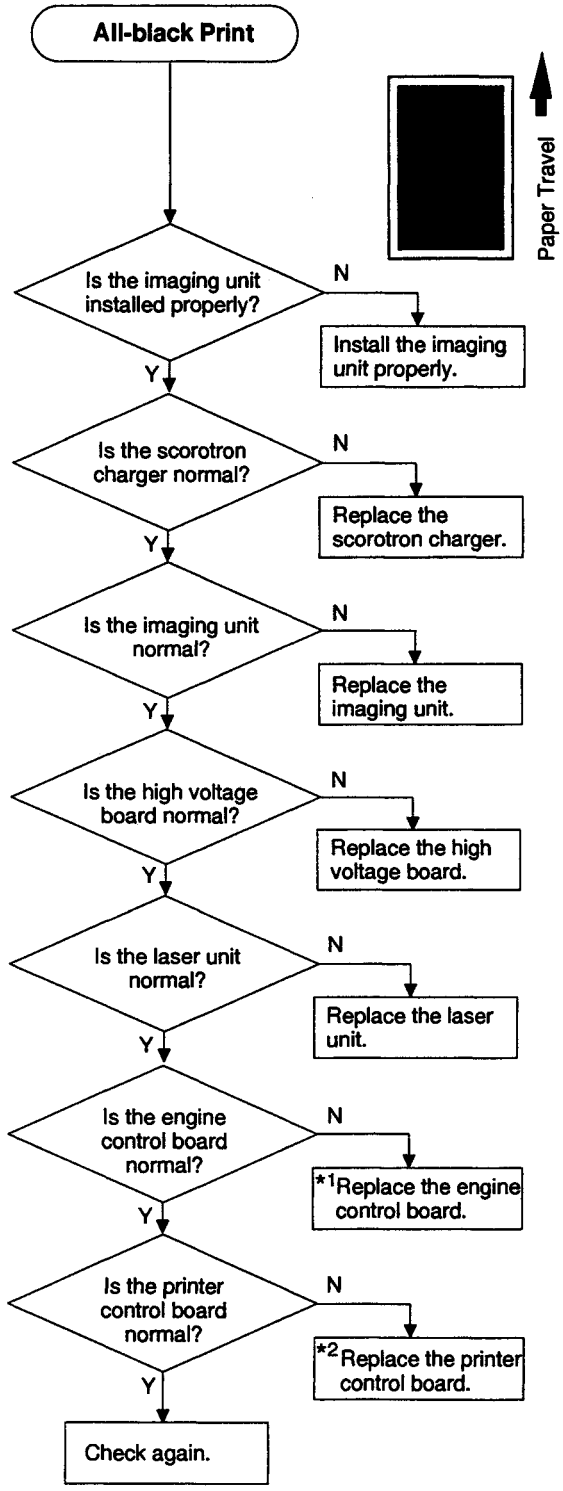
9.4.1 Blank Print



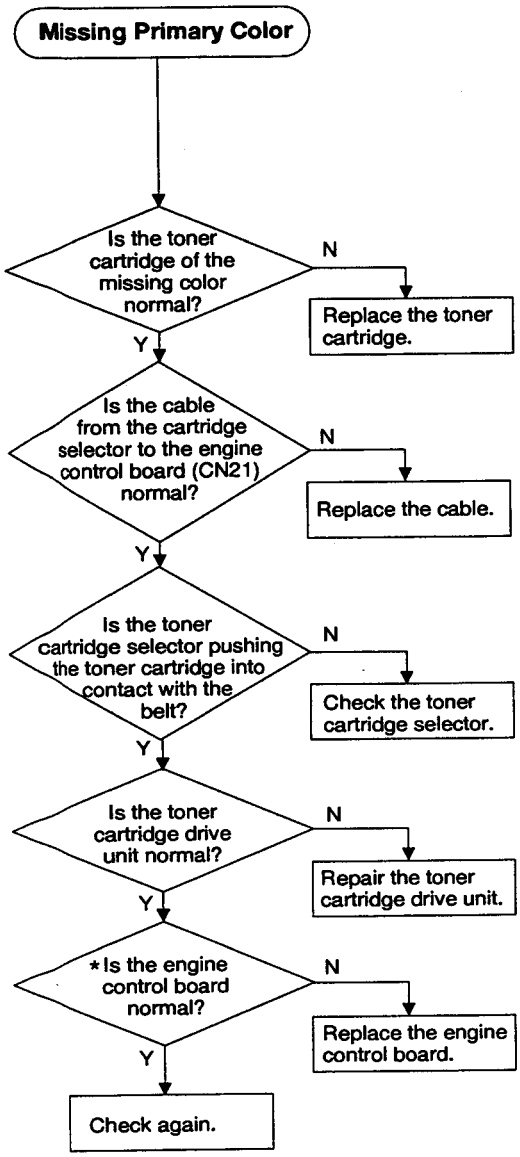
*1 When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

*2 When replacing the Printer Main Control Board, remove IC9 from the original Printer Main Control Board and install it on the new Printer Main Control Board.

9.4.2 All-black Print

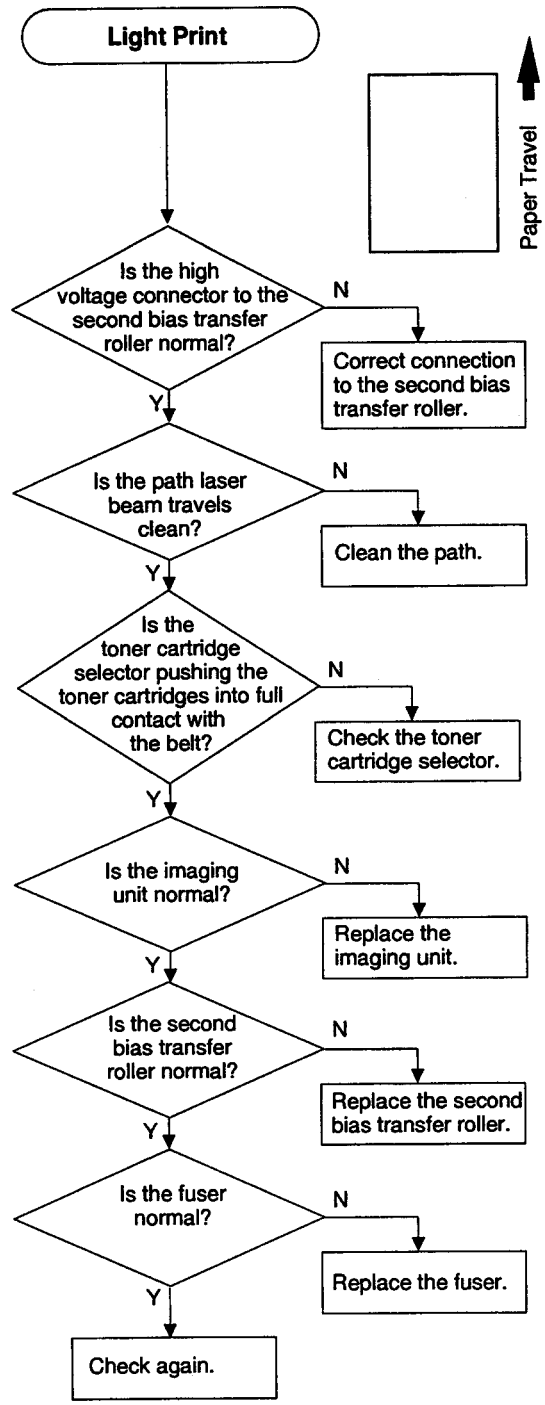


9.4.3 Missing Primary Color

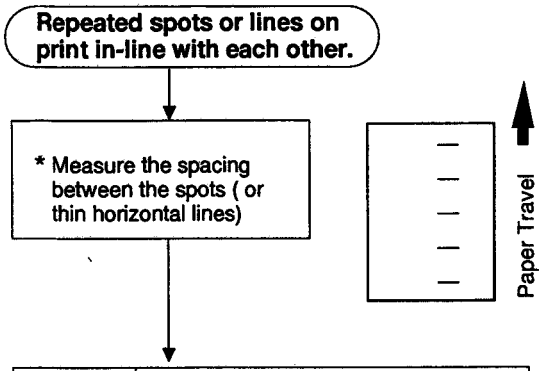


* When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

9.4.4 Light Print



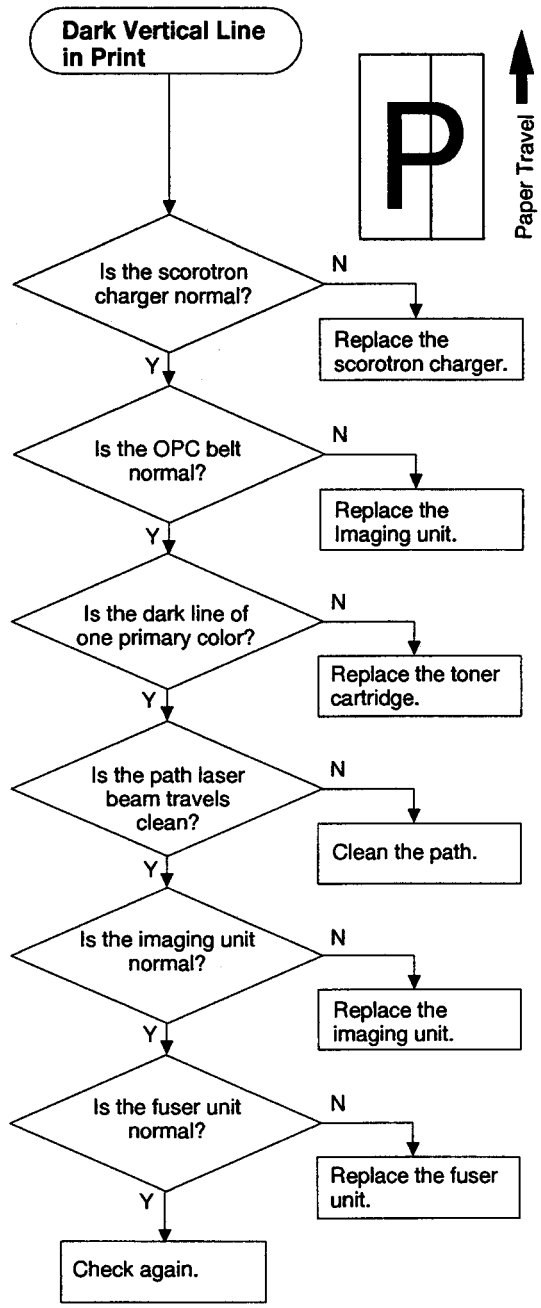
9.4.5 Repeated spots or lines on print in-line with each other.



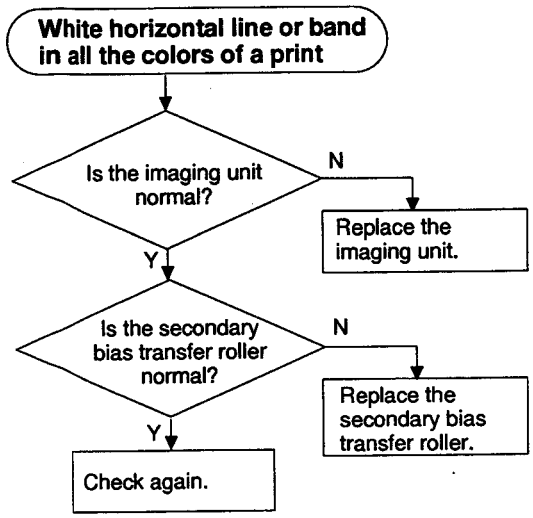
Space	Possible cause and remedy.
1.5 mm	Imaging unit gears poorly meshing. Replace the imaging unit.
26 mm (1200 dpi)	Replace the toner cartridge.
34 mm (600 dpi)	Replace the toner cartridge.
76 mm	Replace the second bias transfer roller.
94 mm	Imaging unit belt defect. Replace the imaging unit.
103 mm	Paper feeder drive gear broken tooth. Repair the paper feeder.
125 mm	Fuser roller defect. Replace the fuser.

* The distance between the repeating spots indicates the source of the problem. Thin horizontal lines, depending on problem, the distance between lines may range from 1.5mm between each line to 103mm between each line.

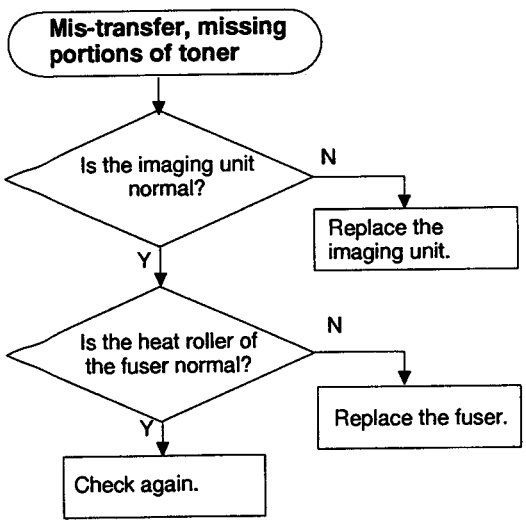
9.4.6 Dark Vertical Line in Print



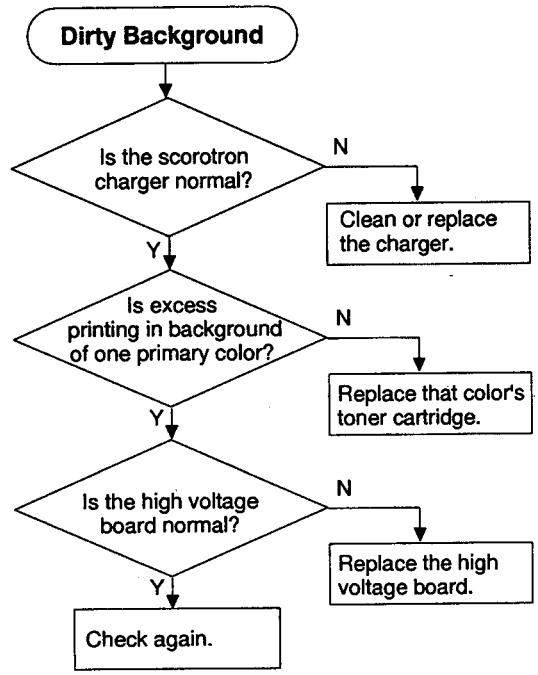
9.4.7 White horizontal line or band in all the colors of a print



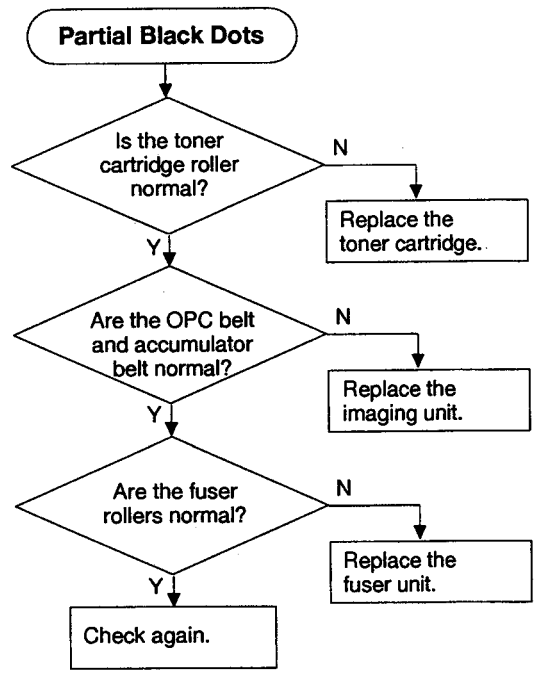
9.4.8 Mis-transfer, missing portions of toner



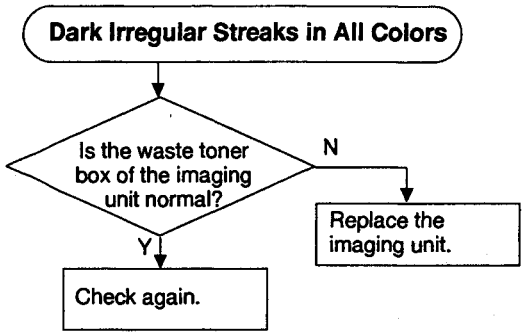
9.4.9 Dirty Background



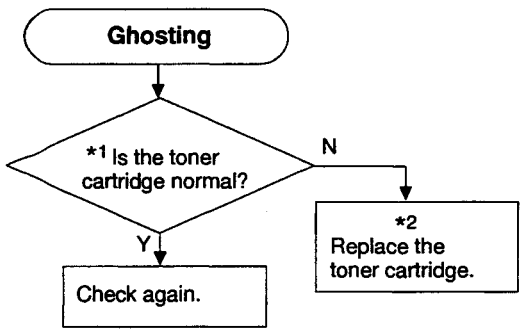
9.4.10 Partial Black Dots



9.4.11 Dark Irregular Streaks in All Colors



9.4.12 Ghosting

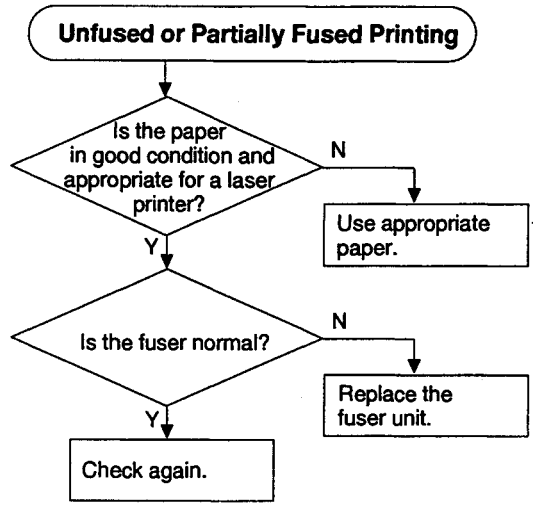


*1 Ghosting with some images is unavoidable because of the color structure of the images. If a color is used at one part of the image area and the same color is used again at a later area, it is very possible to get ghosting of the first image into the second image area after one revolution of the toner cartridge developer roller. This occurs because the charge that is created from the first use of the color was not totally extinguished, a small residual charge remains associated with the color, resulting in the second use of the color to be darker in the same areas as the first image resulting in the first image ghosting into the second image when the same color is issued.

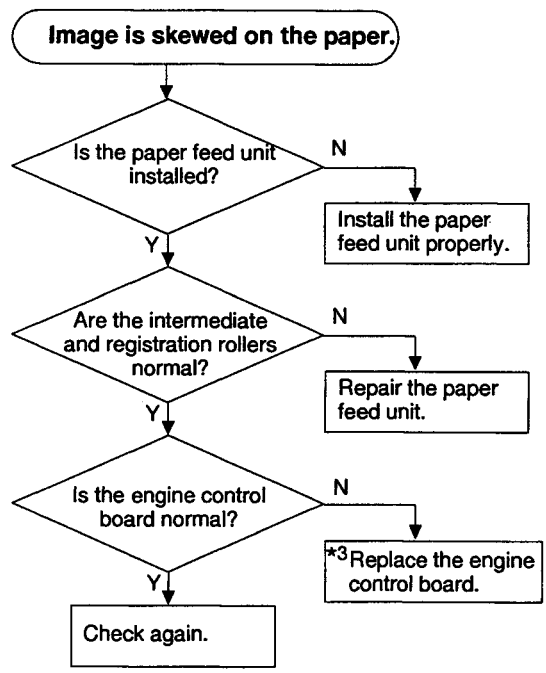
*2 A new toner cartridge exhibits less ghosting. Ghosting increase as toner cartridges age.

*3 When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

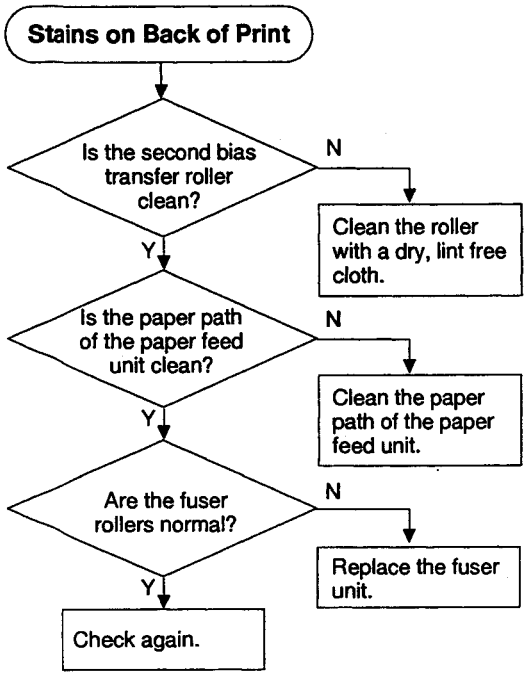
9.4.13 Unfused or Partially Fused Printing



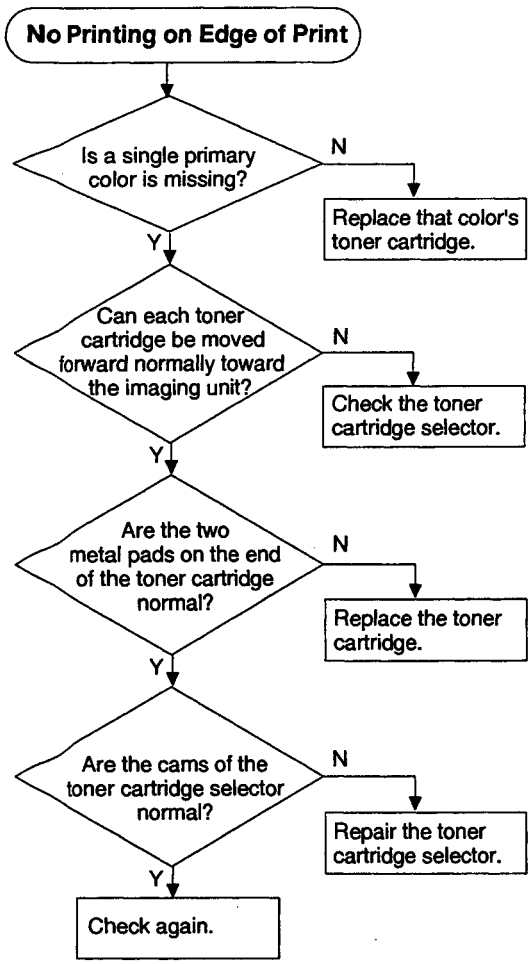
9.4.14 Image is skewed on the paper.



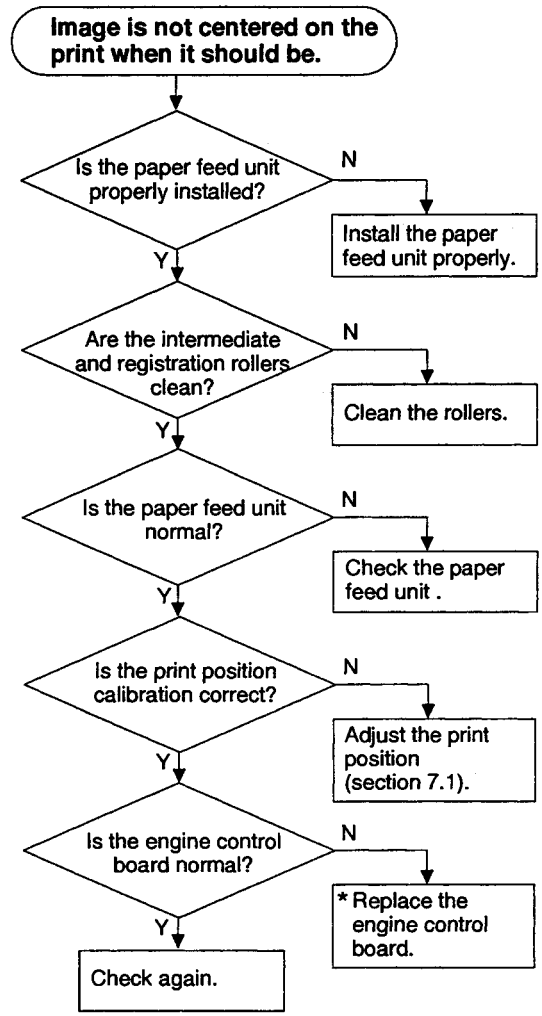
9.4.15 Stains on Back of Print



9.4.16 No Printing on Edge of Print



9.4.17 Image is not centered on the print when it should be.

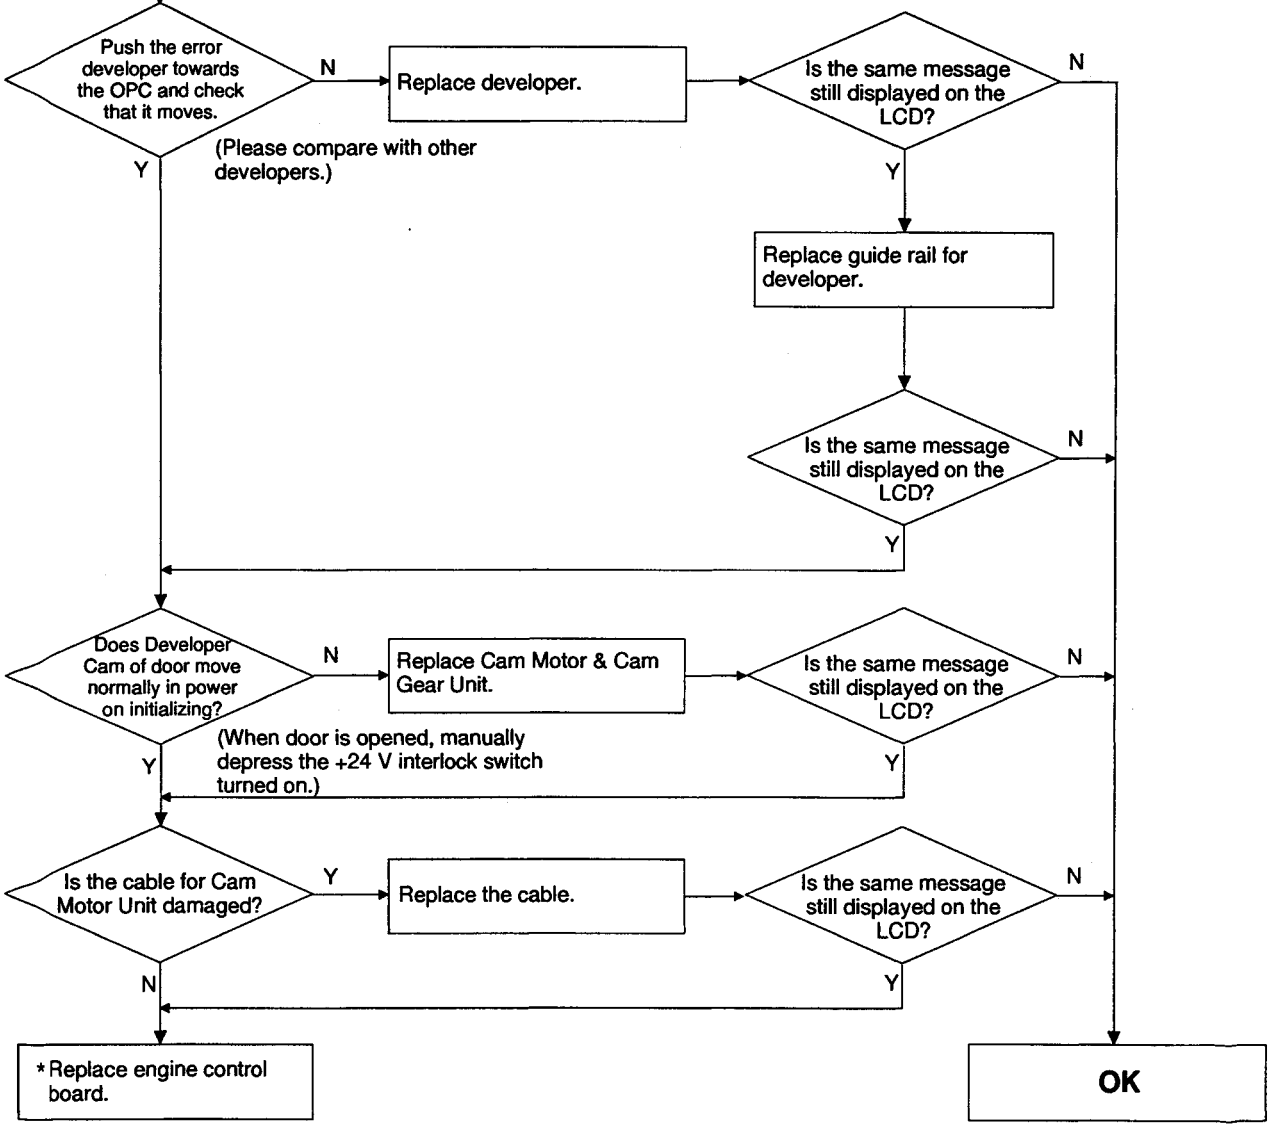


* When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

9.5 Printer Error (Call Service)

9.5.1 Printer Error 01 ~ 04

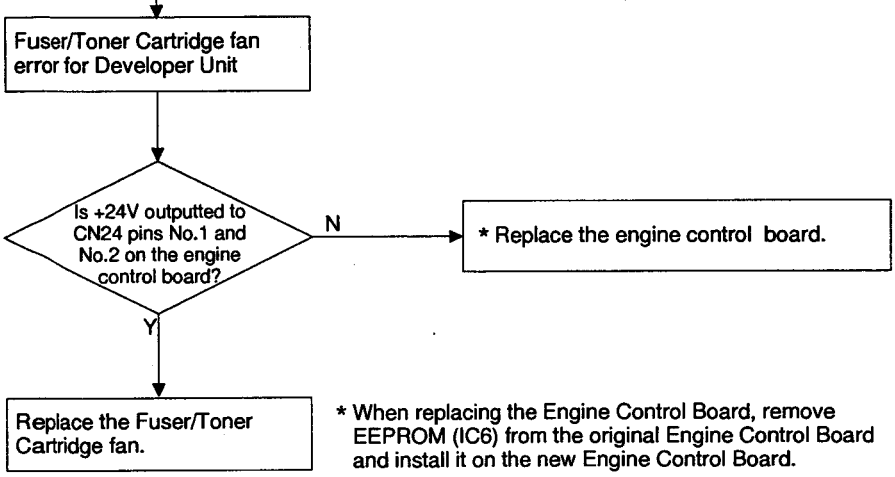
LCD Message	Possible Cause
Printer Error 01	Black developing unit movement error
Printer Error 02	Cyan developing unit movement error
Printer Error 03	Magenta developing unit movement error
Printer Error 04	Yellow developing unit movement error



*When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

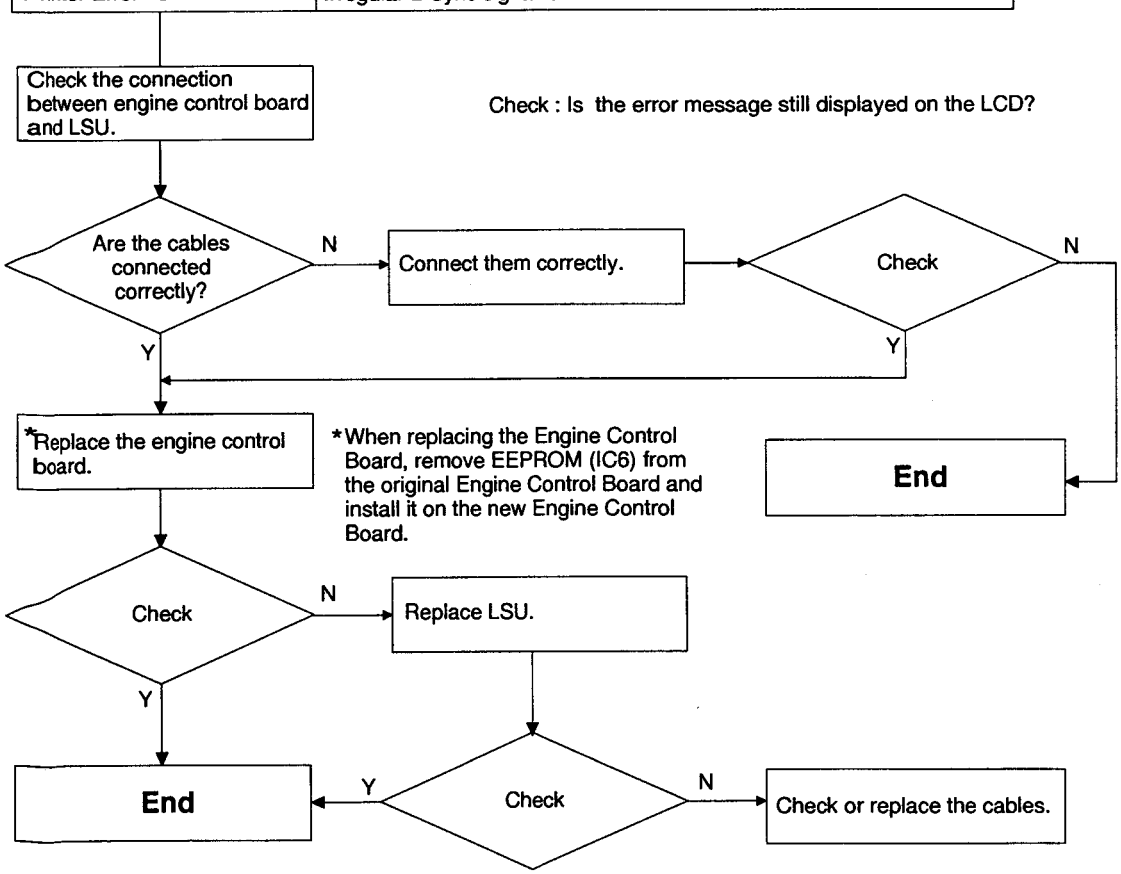
9.5.2 Printer Error 05

LCD Message	Possible Cause
Printer Error 05	Fuser/Toner Cartridge fan is not rotating at normal speed.



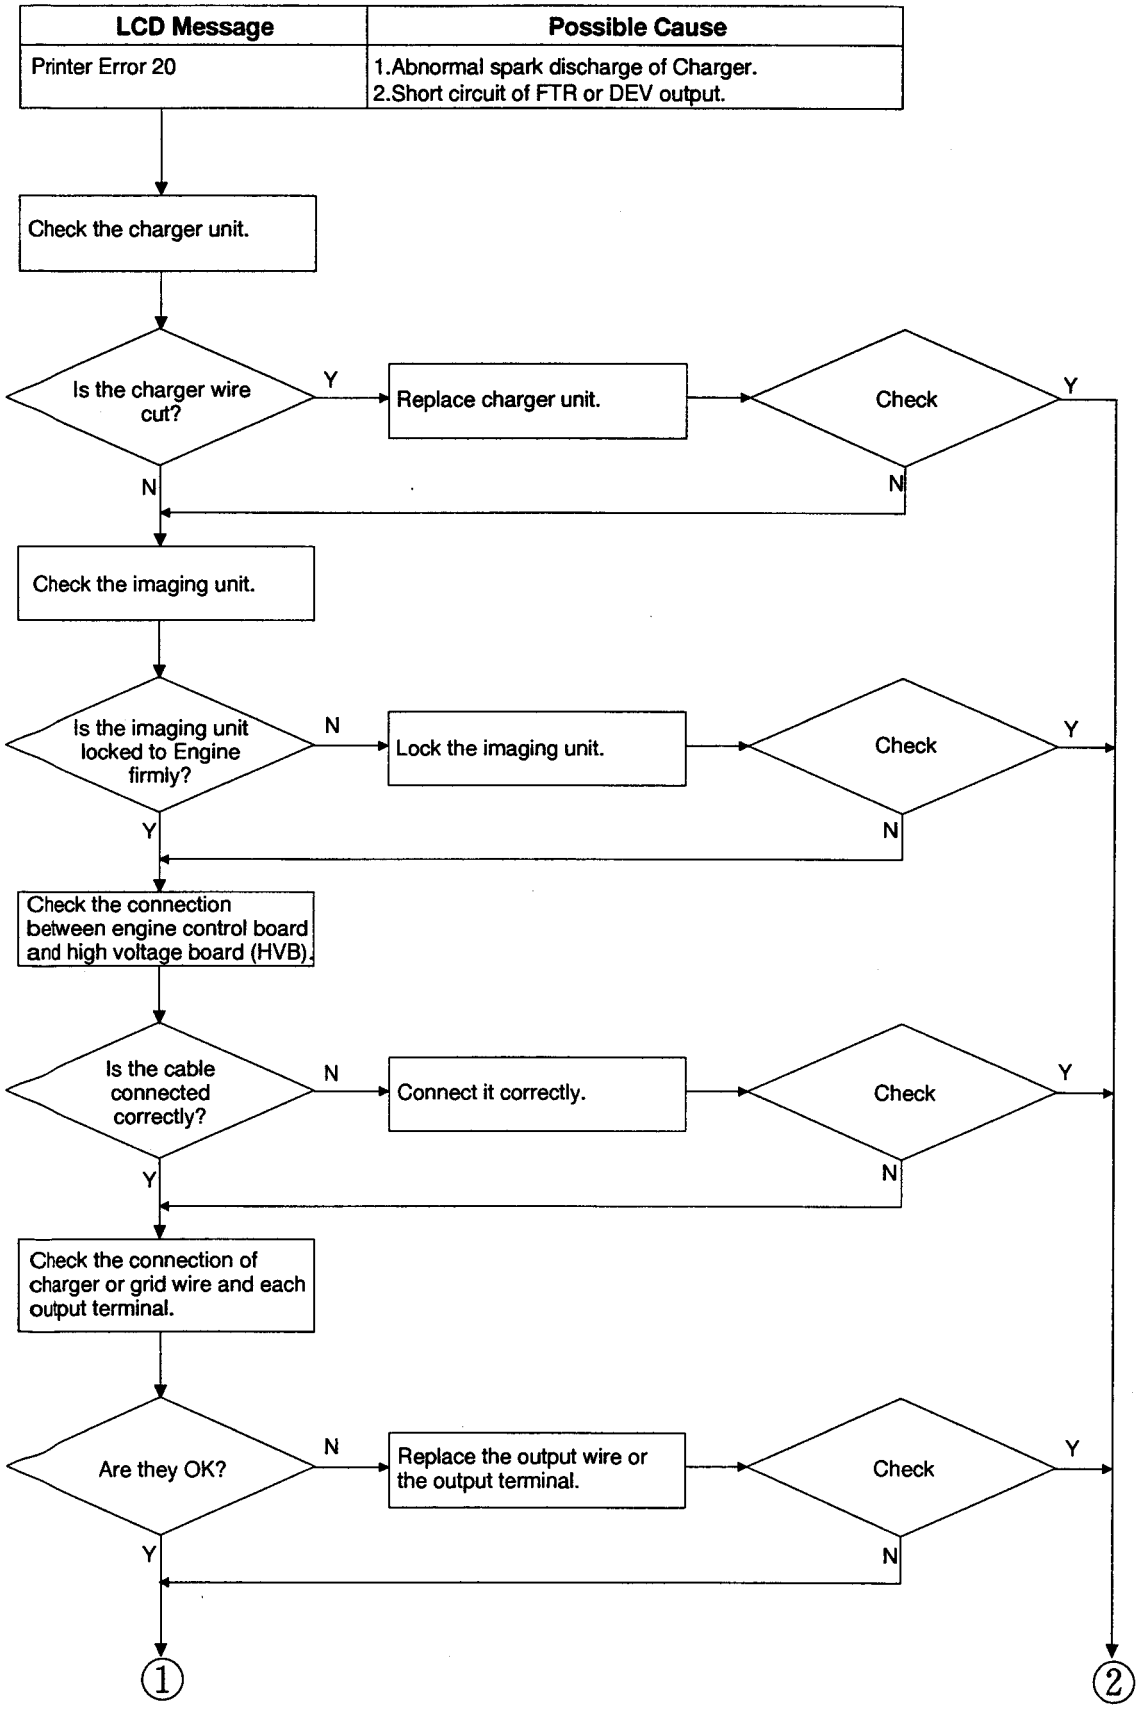
9.5.3 Printer Error 10, 12 and 13

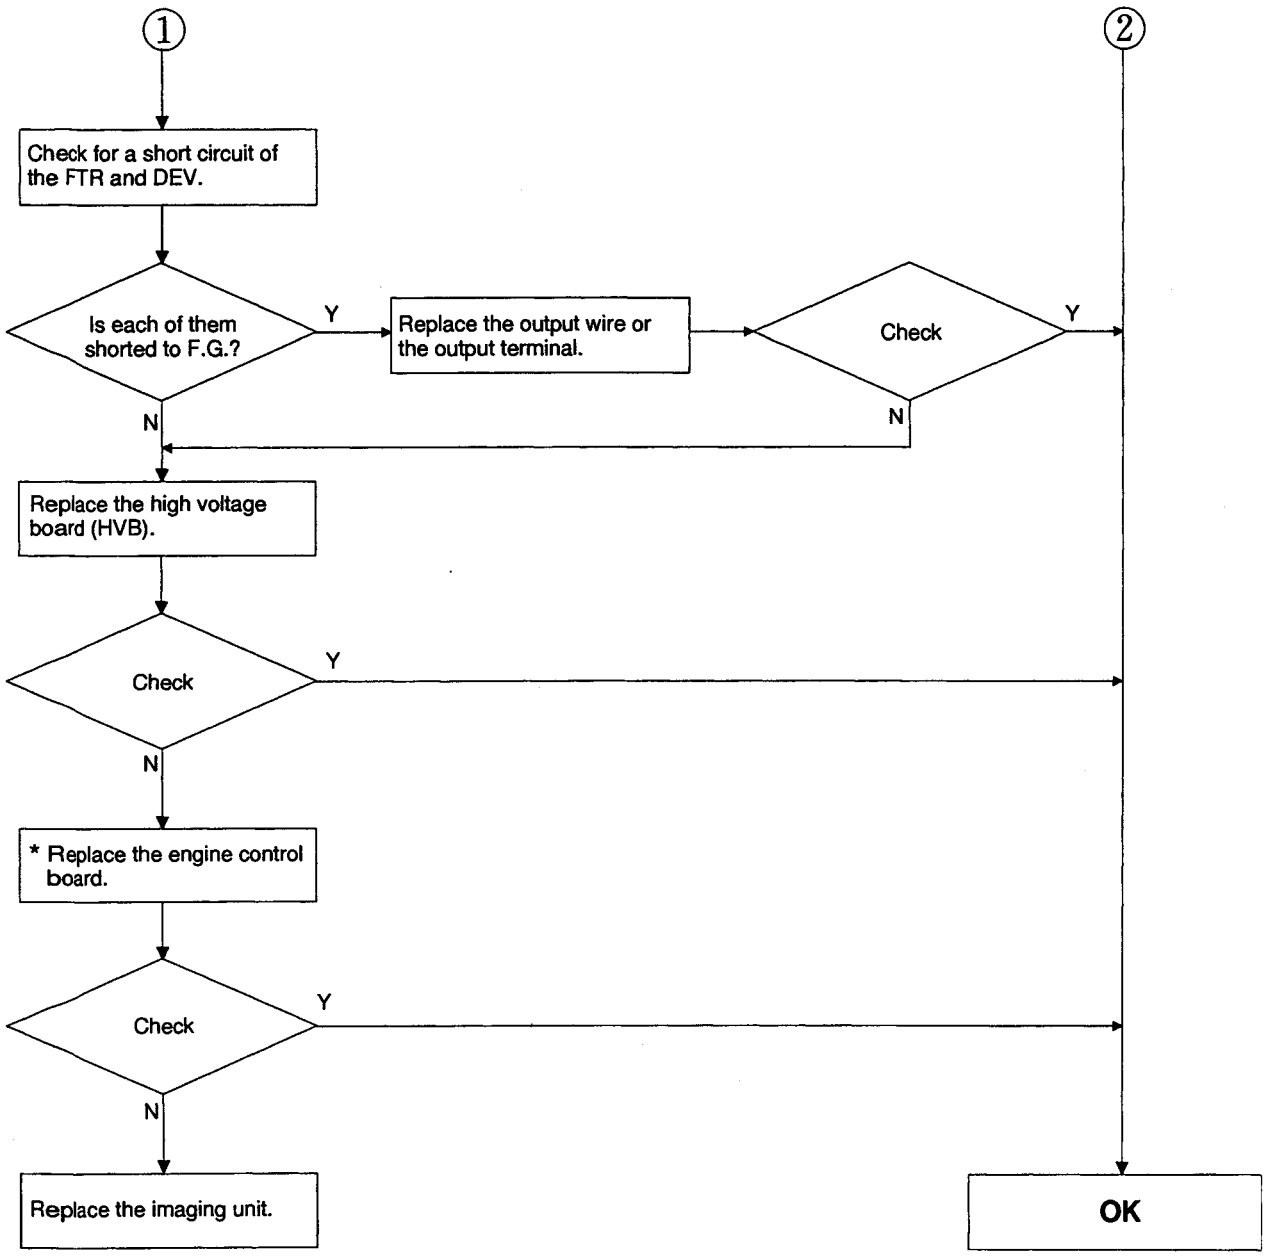
LCD Message	Possible Cause
Printer Error 10 Printer Error 12 Printer Error 13	Polygon motor is not phase-locked and is not rotating at normal speed. L-Sync Signal is not detected after APC. Irregular L-Sync signal is detected.



9.5.4 Printer Error 20

LCD Message	Possible Cause
Printer Error 20	1.Abnormal spark discharge of Charger. 2.Short circuit of FTR or DEV output.



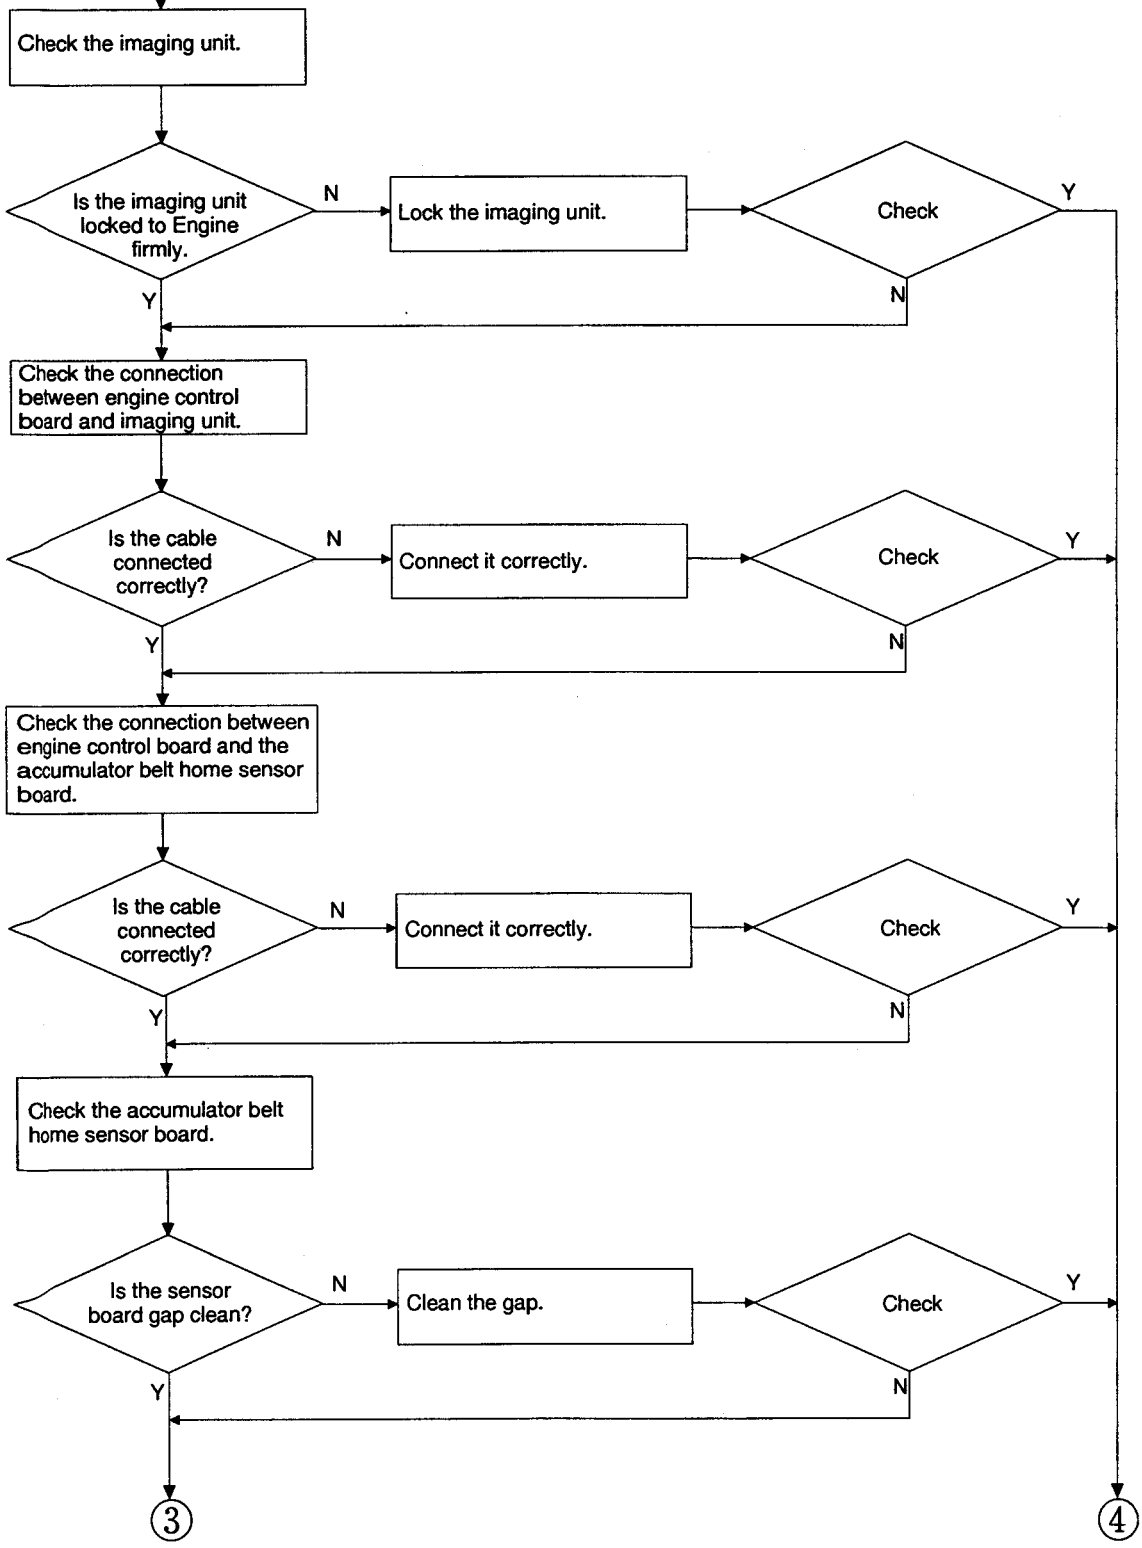


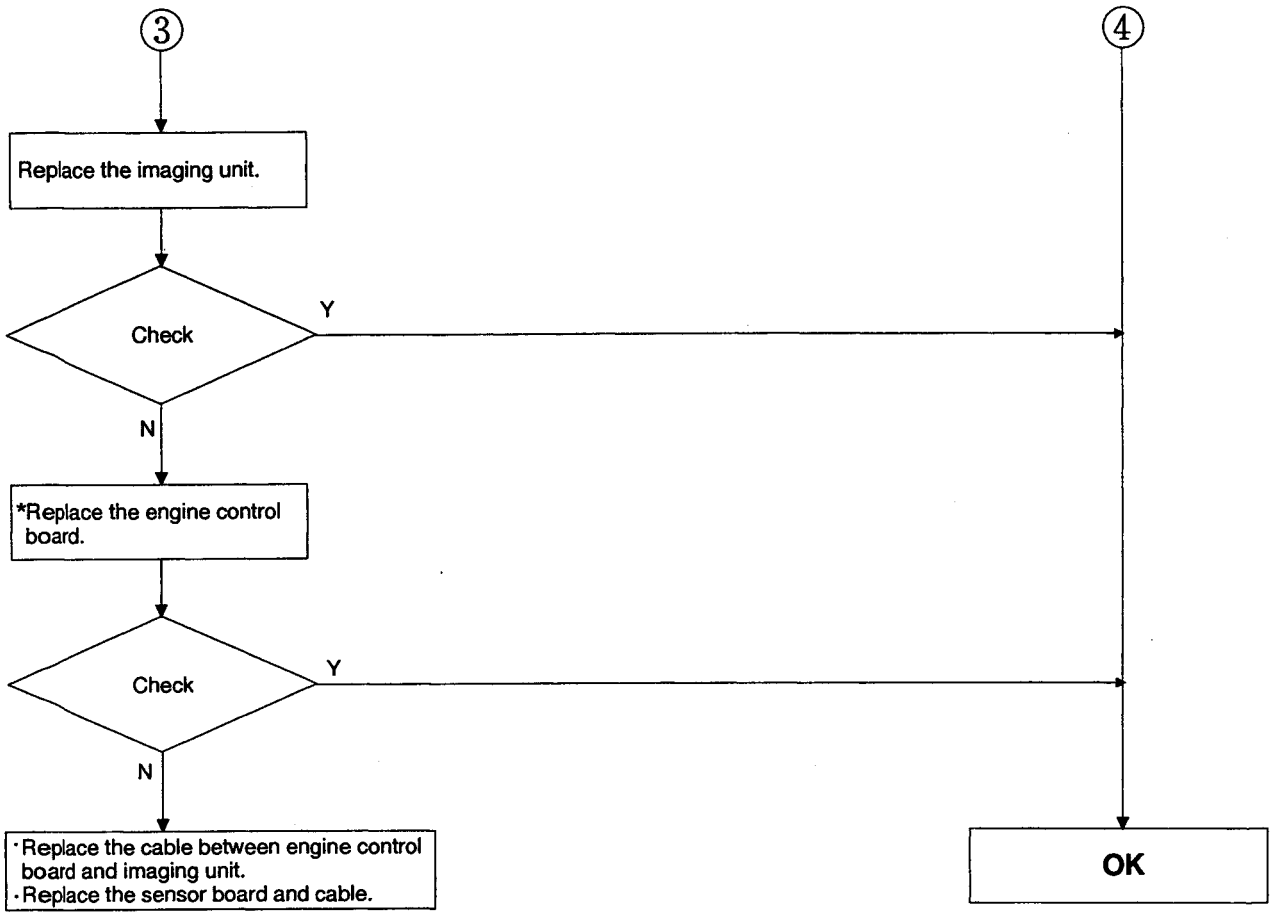
*When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

9.5.5 Printer Error 21

LCD Message	Possible Cause
Printer Error 21	OPC asynchronous with accumulator belt.

OPC home number and accumulator belt home number are not synchronous.

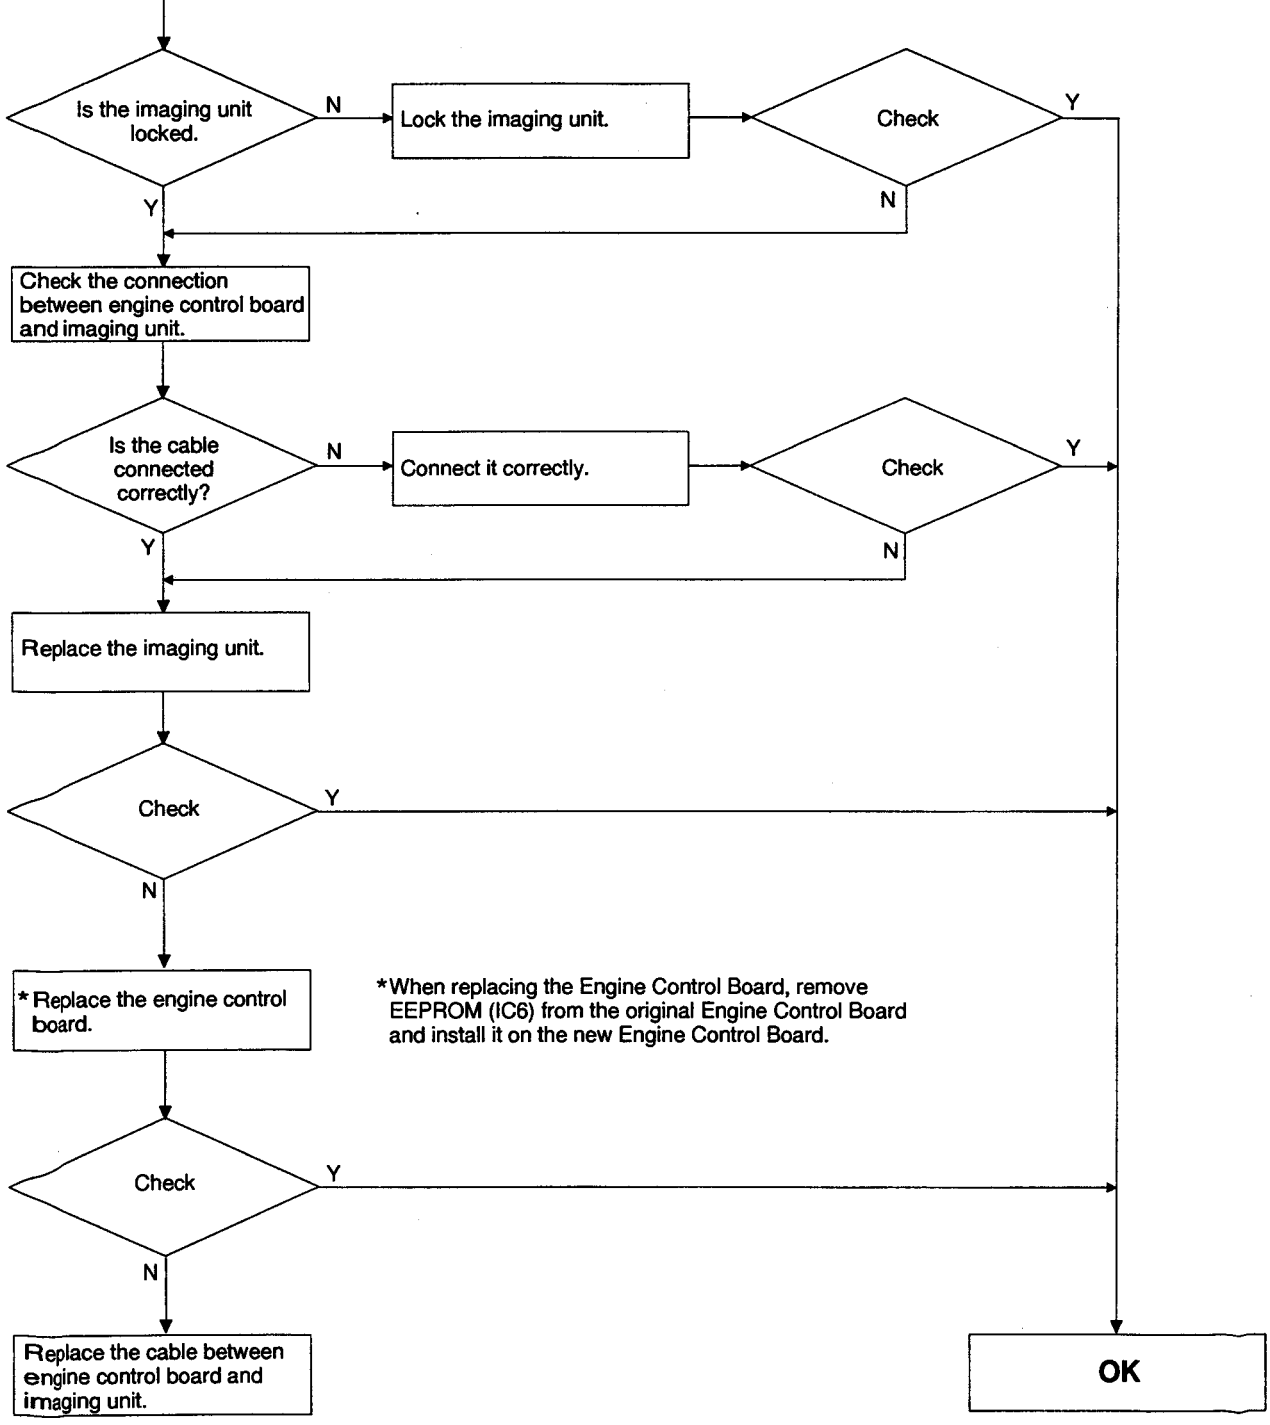




* When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

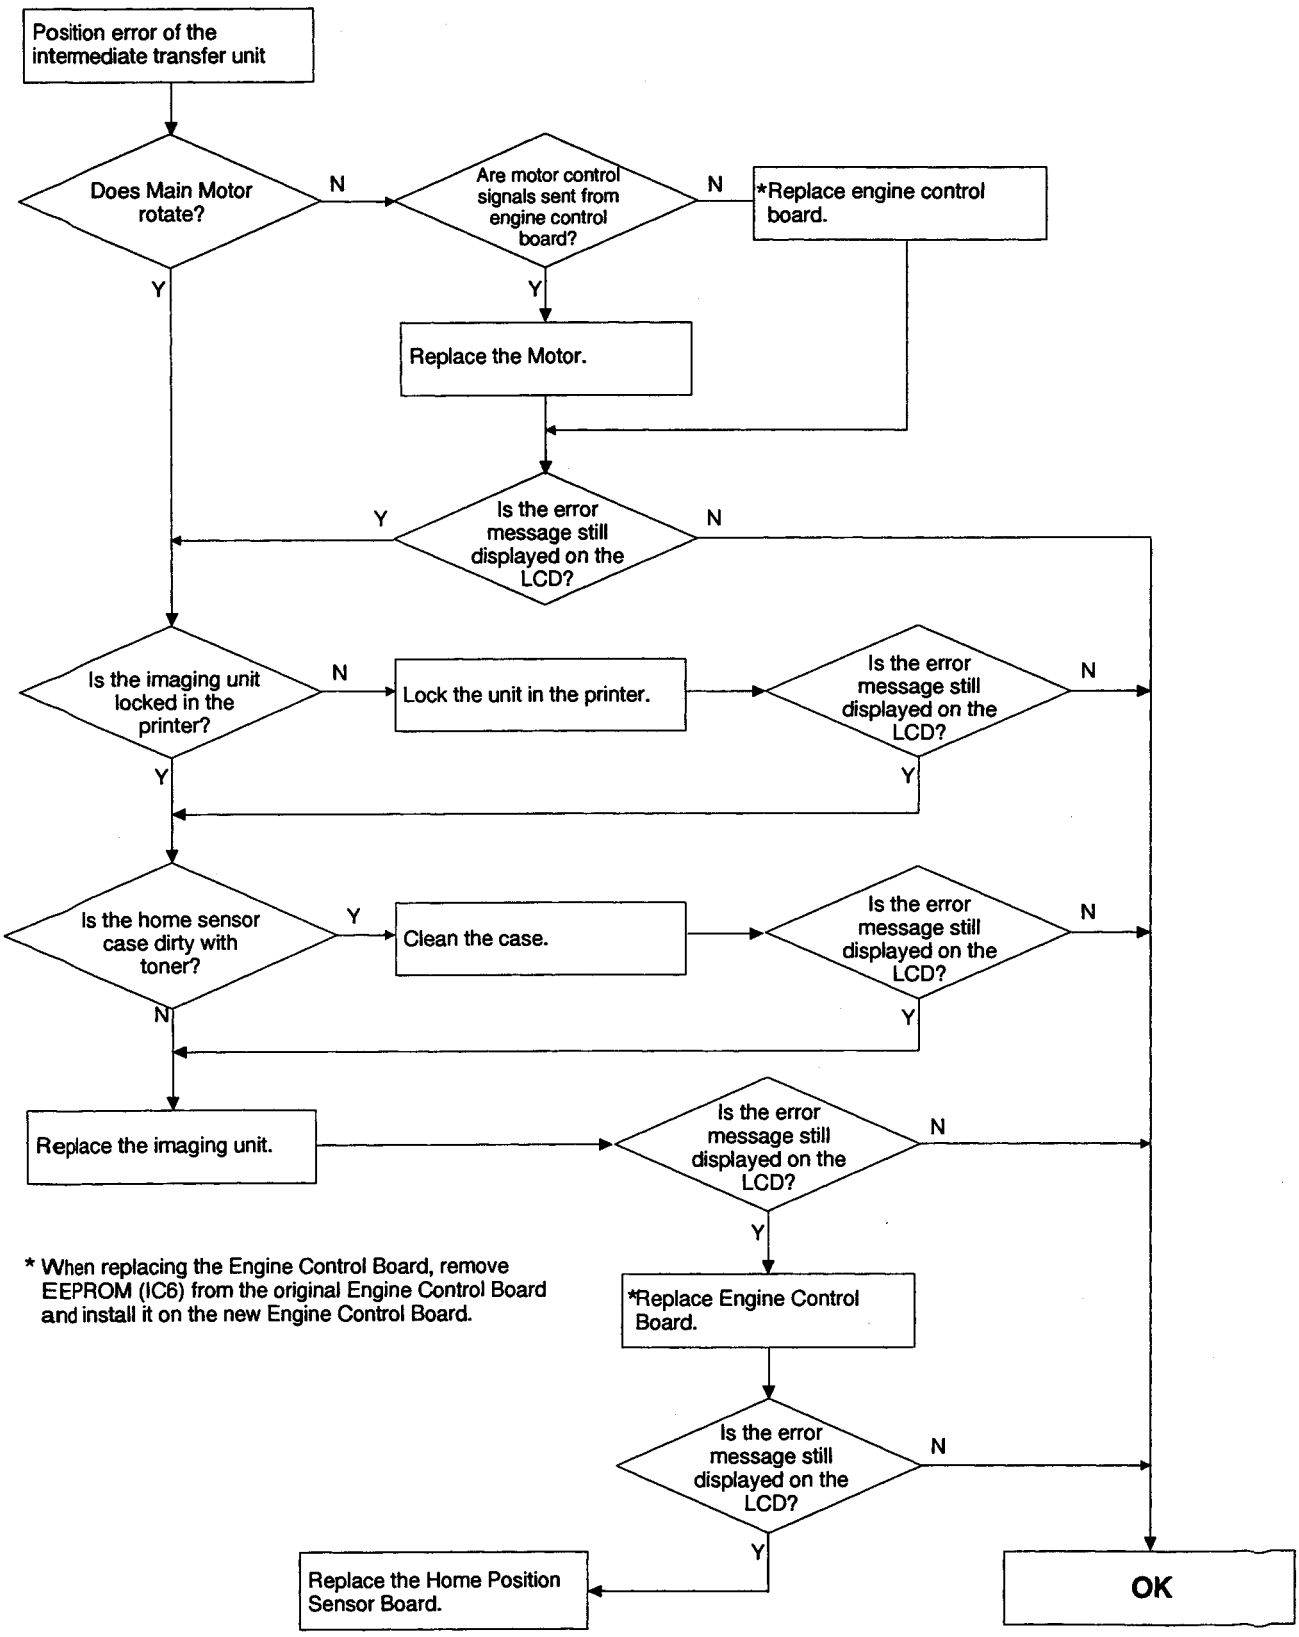
9.5.6 Printer Error 22

LCD Message	Possible Cause
Printer Error 22	OPC home is not detected within 4.5 sec during the main motor rotates.



9.5.7 Printer Error 30

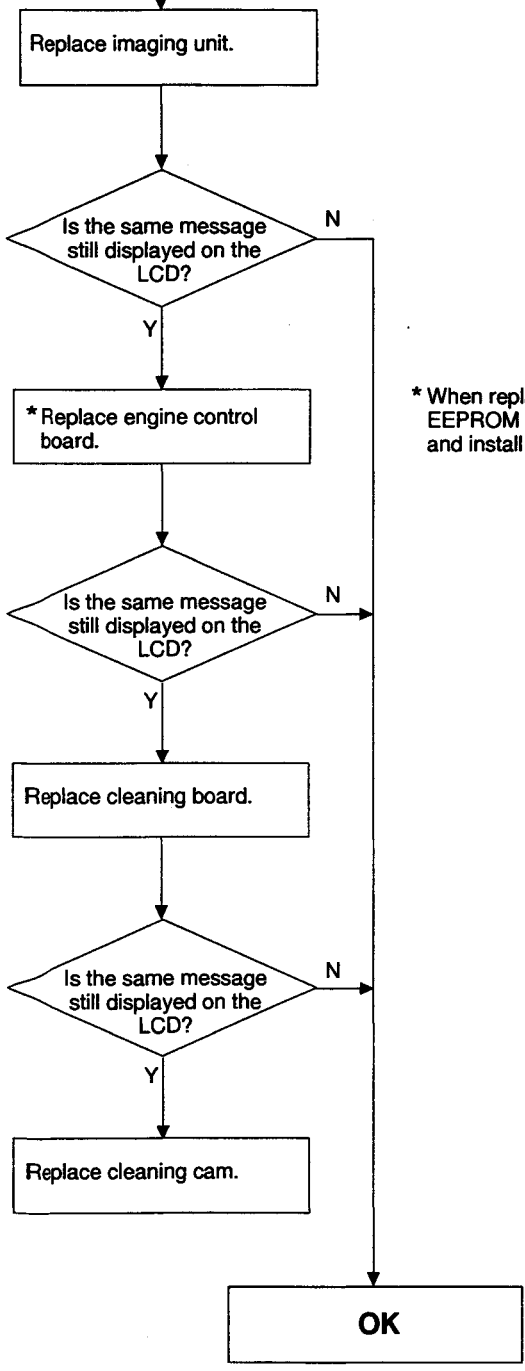
LCD Message	Possible Cause
Printer Error 30	Position error of the intermediate transfer unit



* When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

9.5.8 Printer Error 32

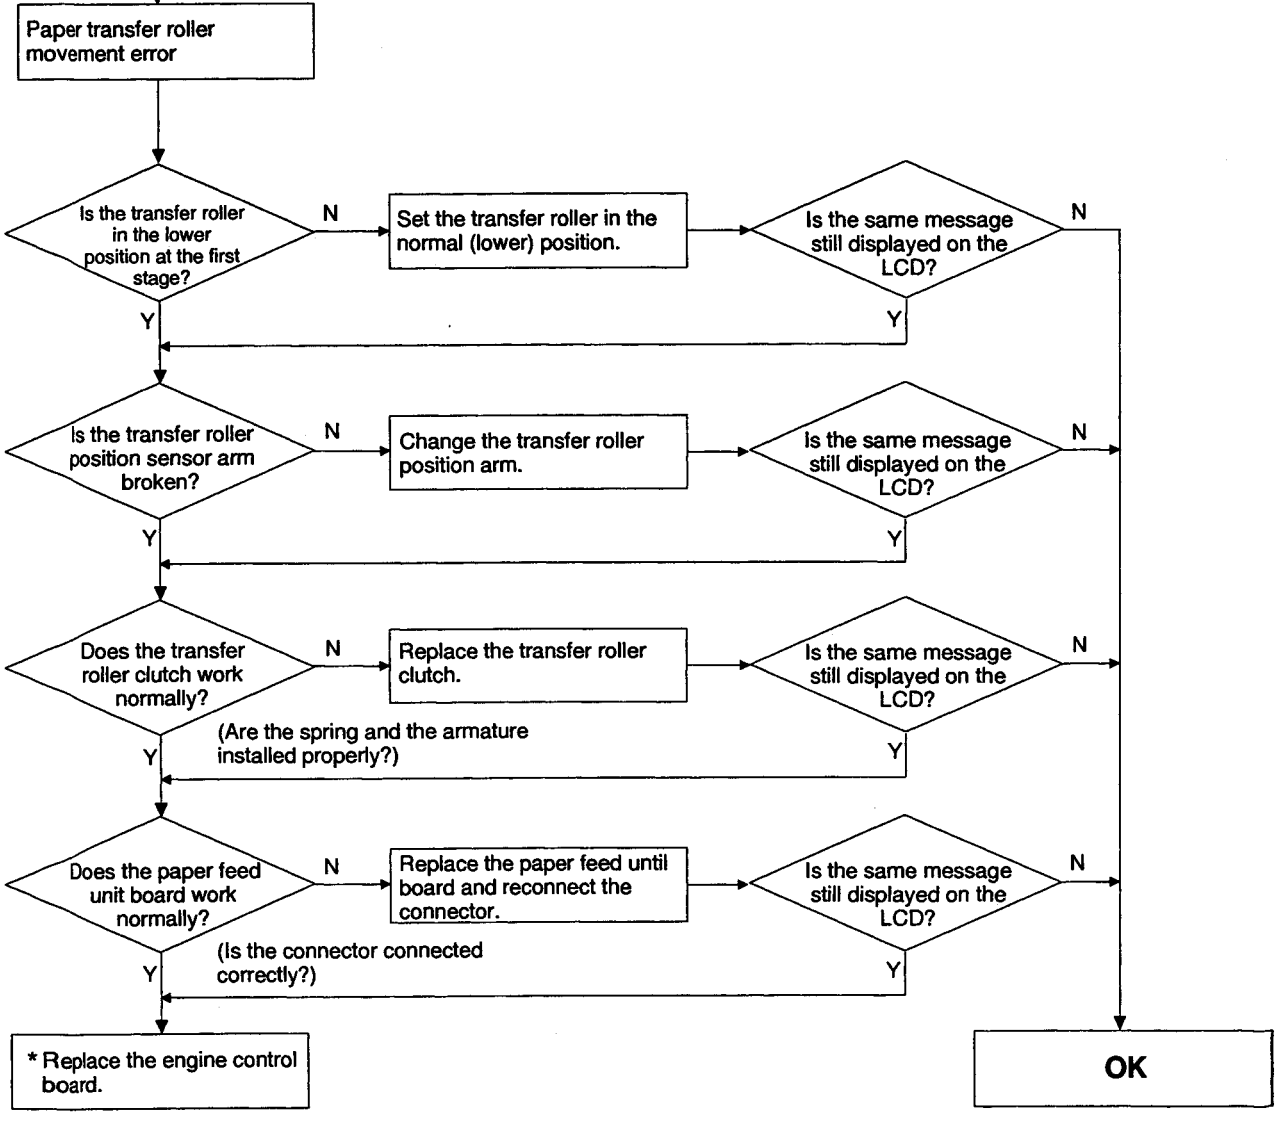
LCD Message	Possible Cause
Printer Error 32	Cleaning blade movement error



* When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

9.5.9 Printer Error 33

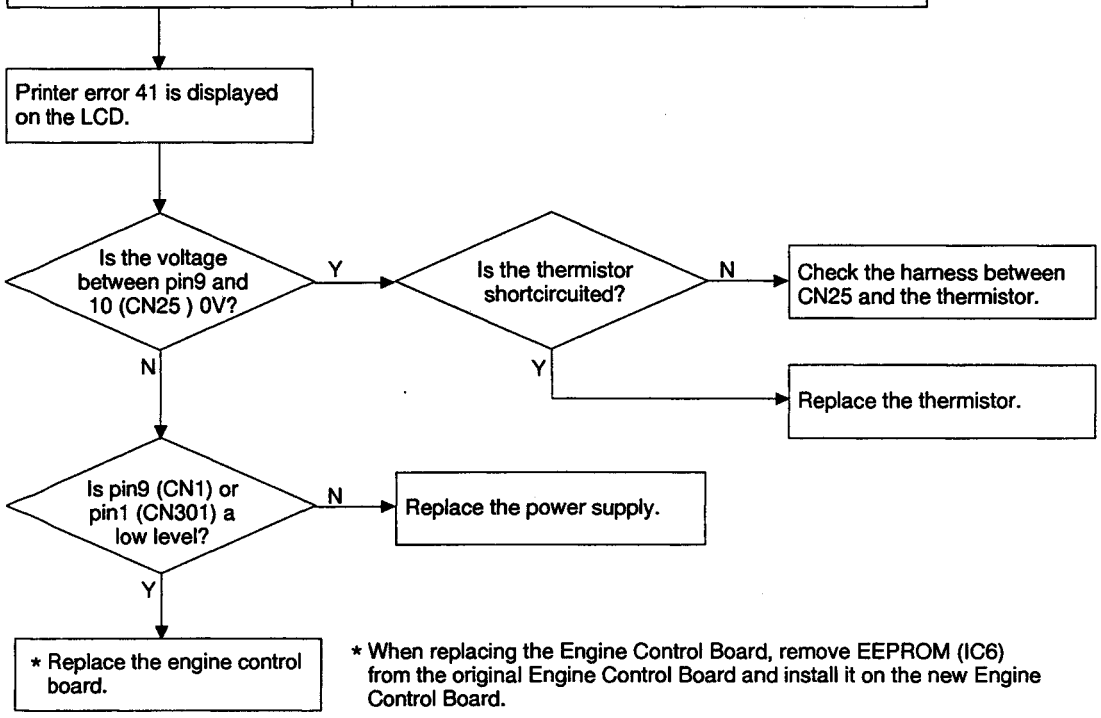
LCD Message	Possible Cause
Printer Error 33	Paper transfer roller movement error



* When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

9.5.10 Printer Error 41

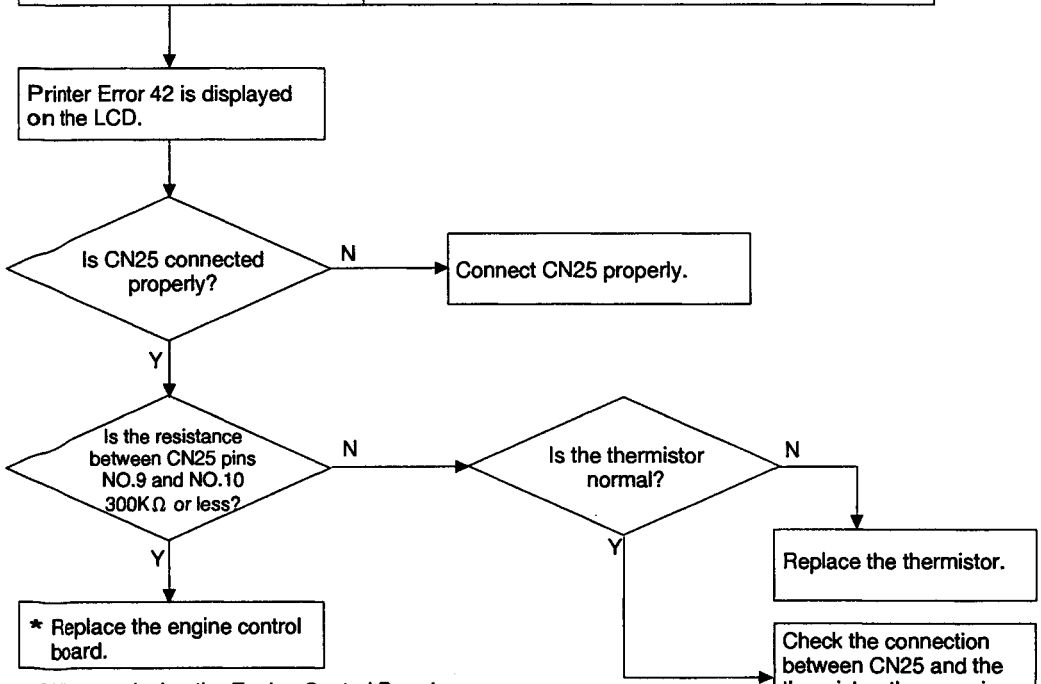
LCD Message	Possible Cause
Printer Error 41	Fuser temperature is over 210°C



* When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

9.5.11 Printer Error 42

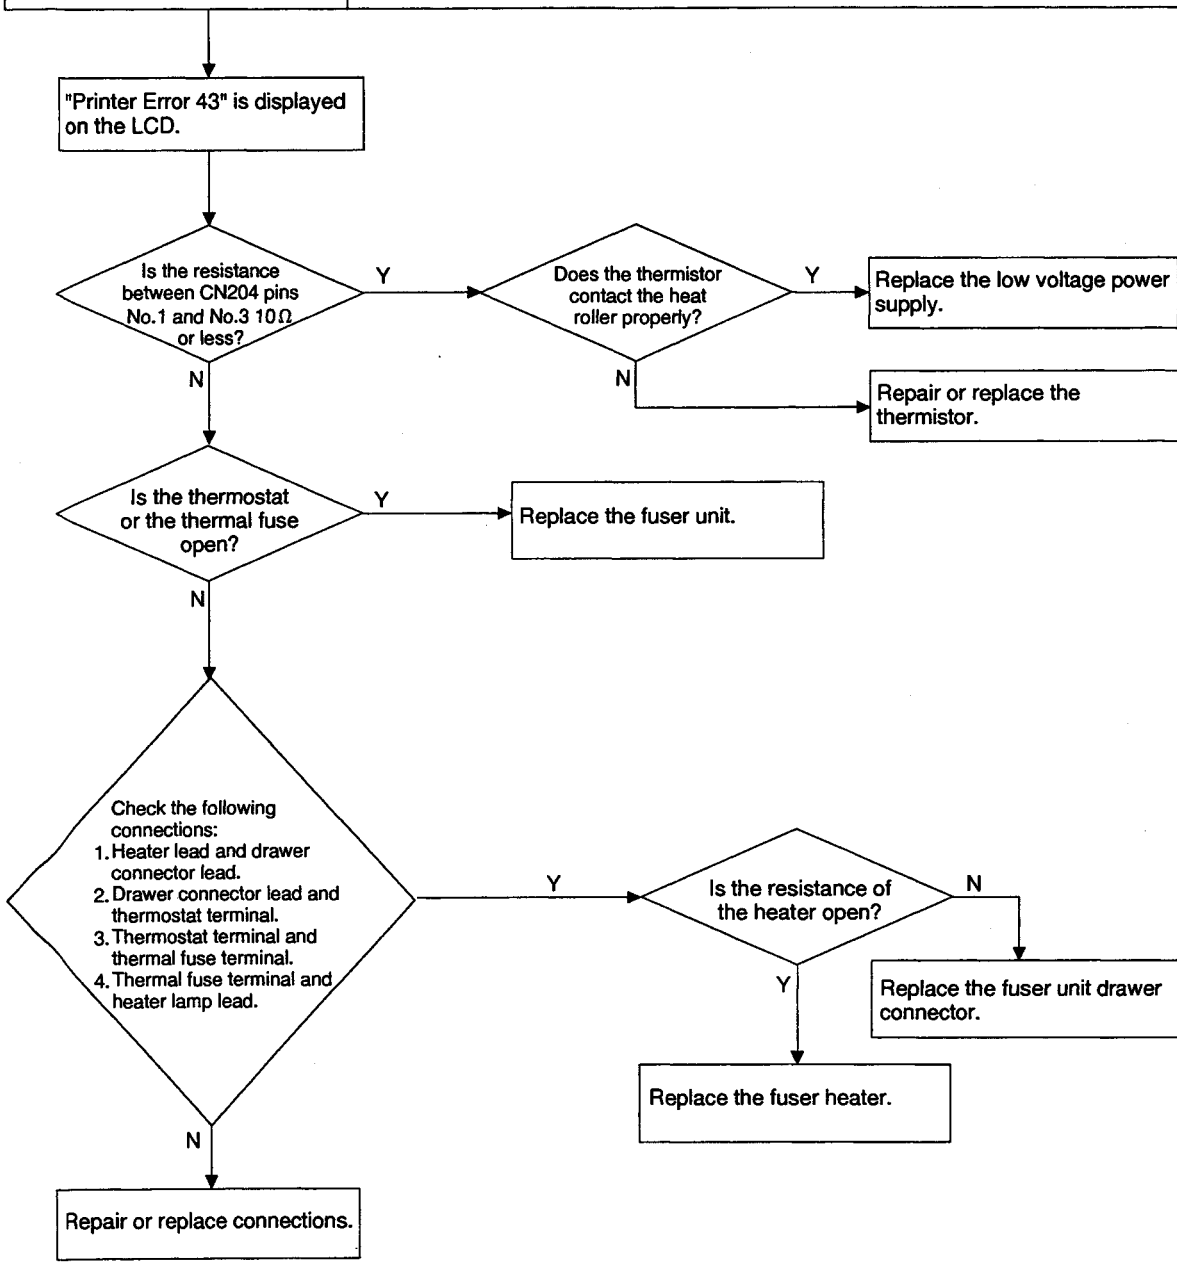
LCD Message	Possible Cause
Printer Error 42	Fuser thermistor is disconnected.



* When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

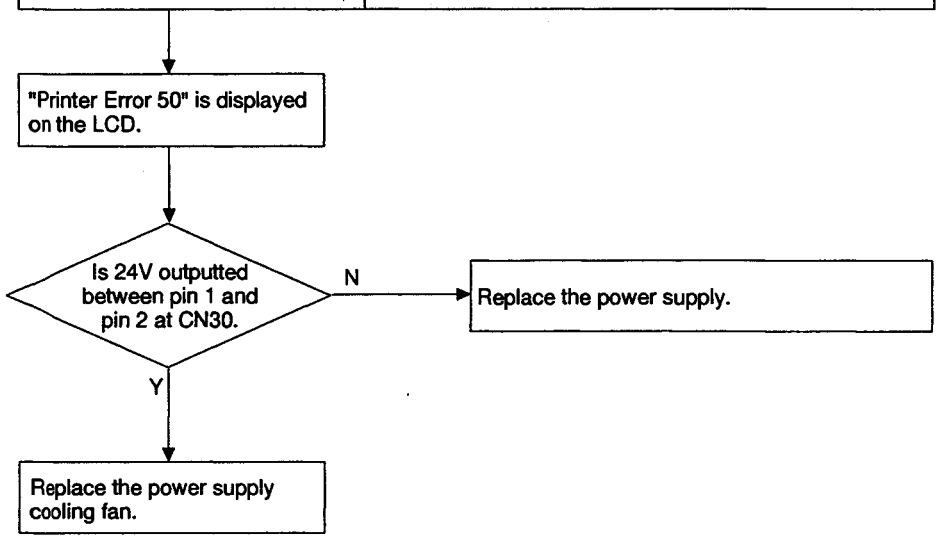
9.5.12 Printer Error 43

LCD Message	Possible Cause
Printer Error 43	Fuser temperature does not reach 100°C within 200sec,160°C within 500sec during warming up, or it is less than 120°C during standby, and it does not return to set temperature within 100sec after the low temperature error occurred during printing.



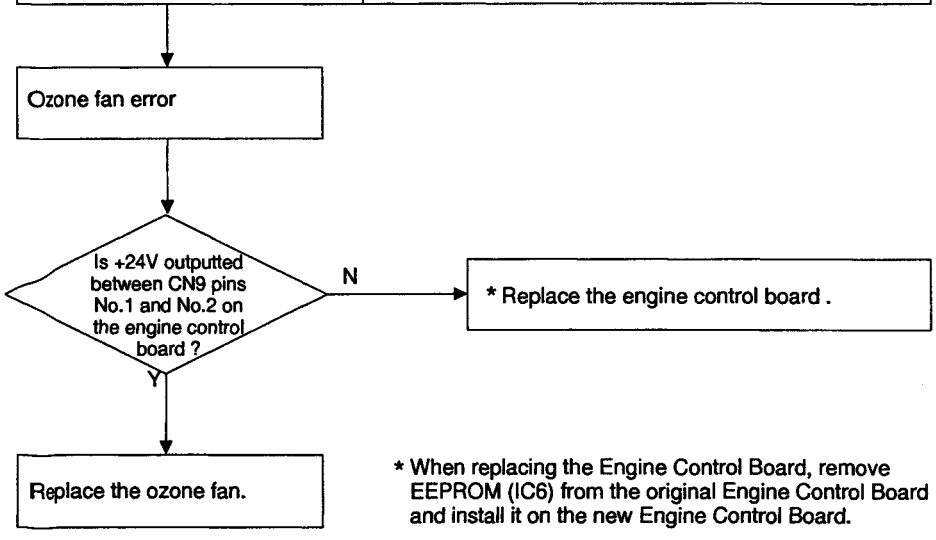
9.5.13 Printer Error 50

LCD Message	Possible Cause
Printer Error 50	Power supply fan is not rotating at normal speed.



9.5.14 Printer Error 51

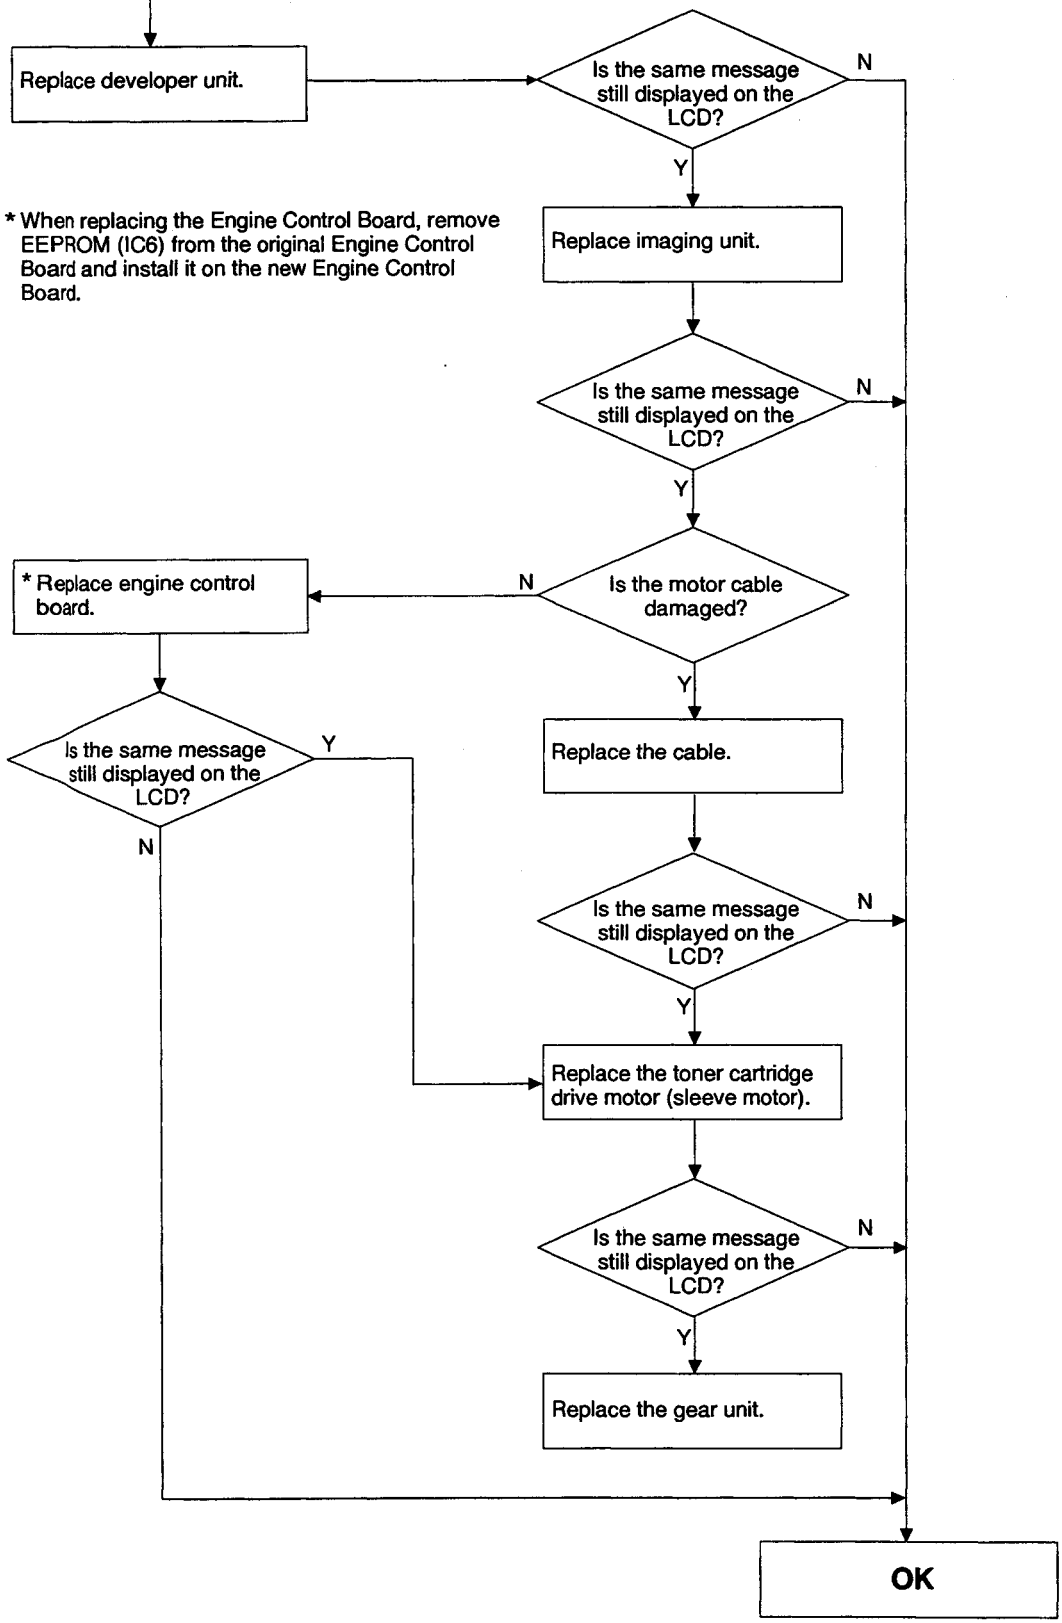
LCD Message	Possible Cause
Printer Error 51	Ozone fan is not rotating at normal speed.



* When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

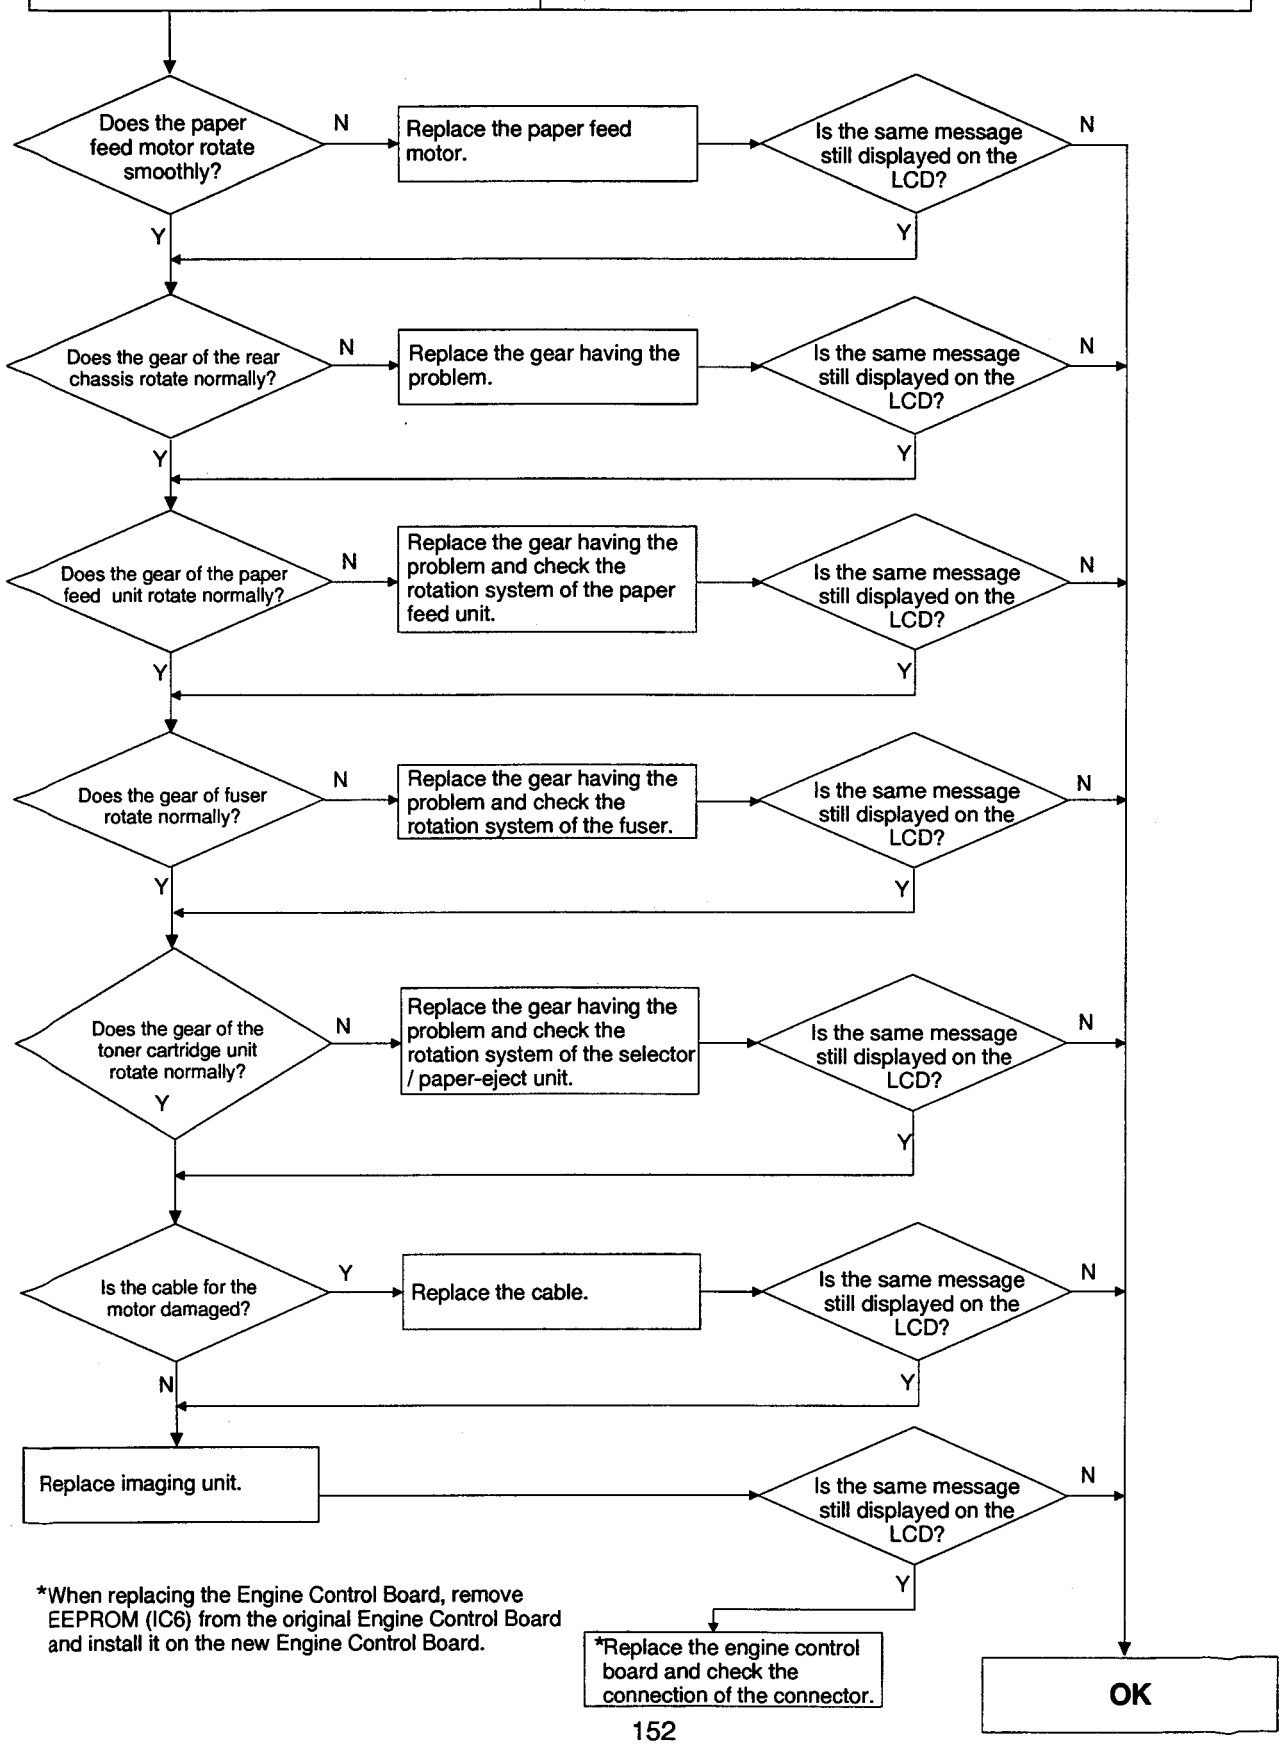
9.5.15 Printer Error 61

LCD Message	Possible Cause
Printer Error 61	Toner cartridge drive motor (sleeve motor) unlocked



9.5.16 Printer Error 62

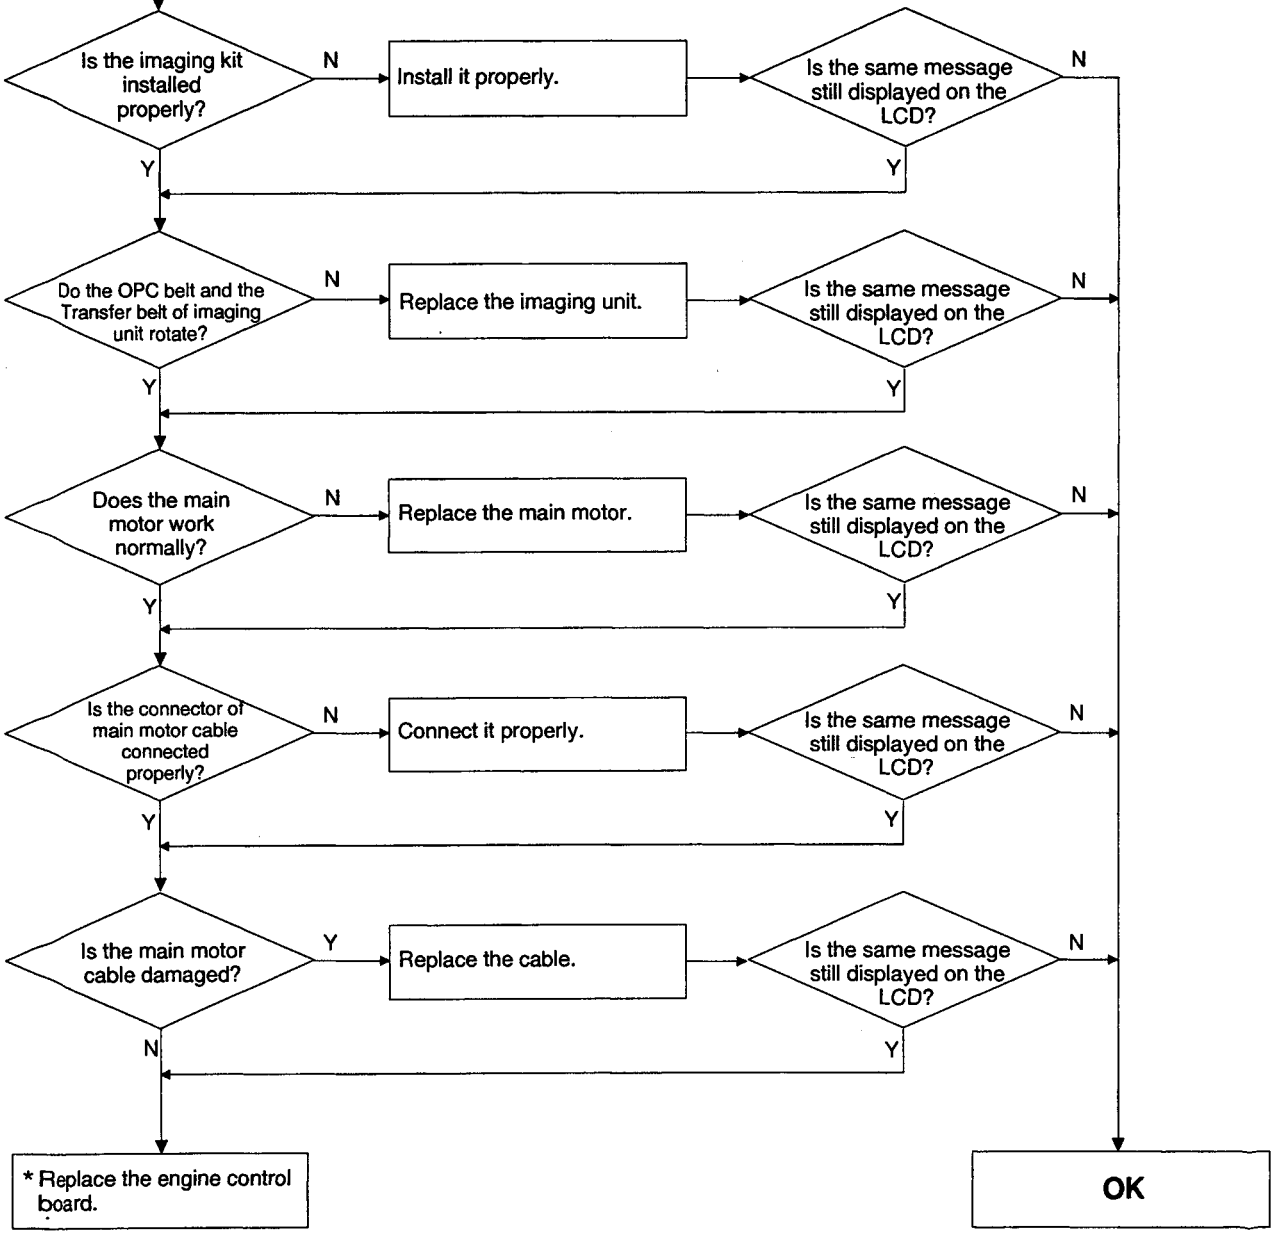
LCD Message	Possible Cause
Printer Error 62	Paper feed motor unlocked



*When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

9.5.17 Printer Error 63

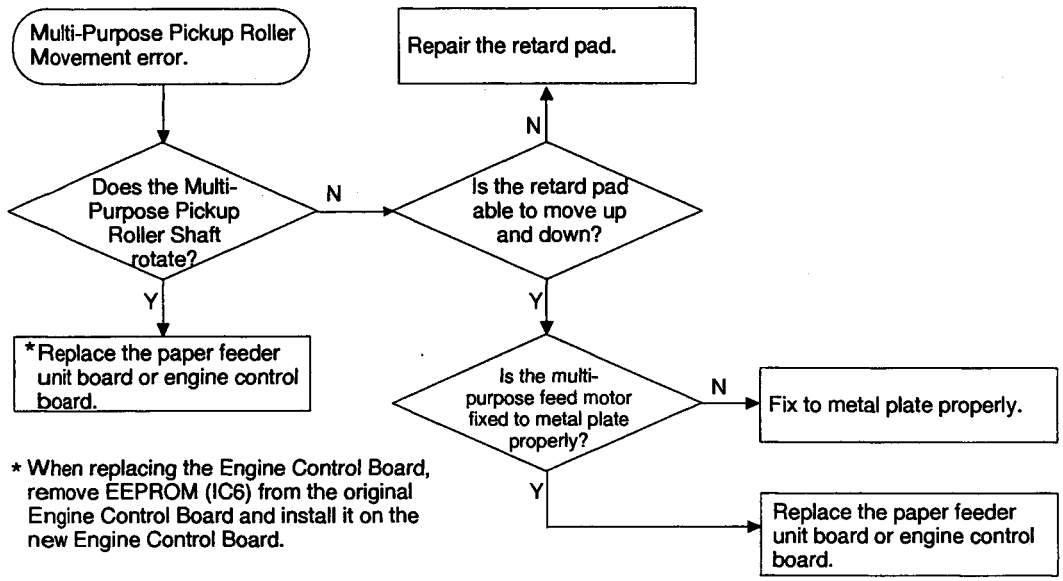
LCD Message	Possible Cause
Printer Error 63	Main motor unlocked



*When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

9.5.18 Printer Error 64

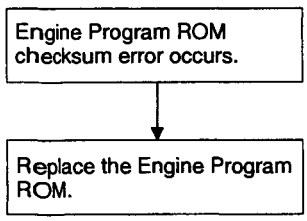
LCD Message	Possible Cause
Printer Error 64	Multi-purpose pickup roller movement error



* When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

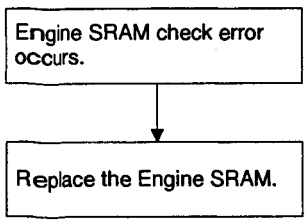
9.5.19 Printer Error 70

LCD Message	Possible Cause
Printer Error 70	Engine Program ROM checksum error



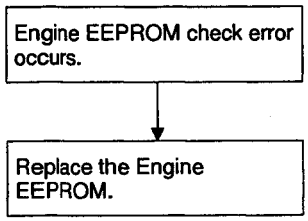
9.5.20 Printer Error 71

LCD Message	Possible Cause
Printer Error 71	Engine SRAM check error



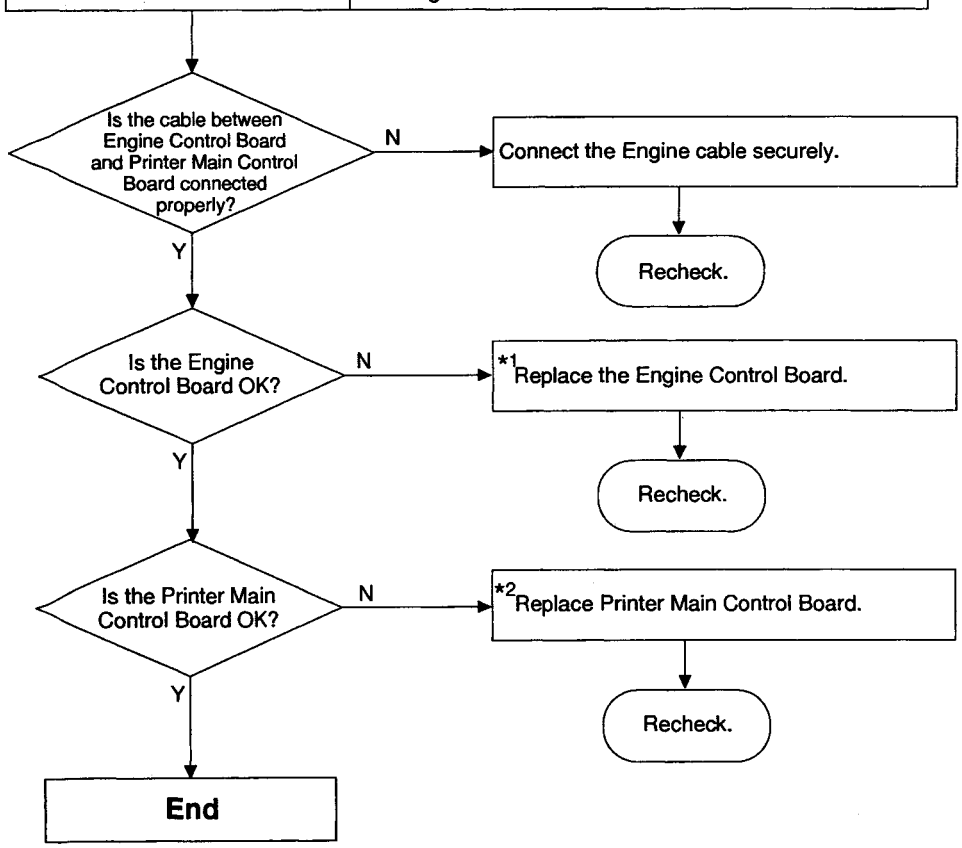
9.5.21 Printer Error 72

LCD Message	Possible Cause
Printer Error 72	Engine EEPROM check error



9.5.22 Printer Error 73

LCD Message	Possible Cause
Printer Error 73	Communication Error of Printer Main Control Board and Engine Control Board.

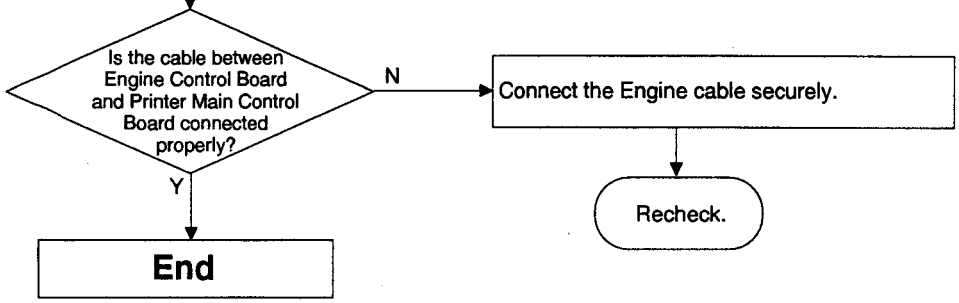


*1 When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

*2 When replacing the Printer Main Control Board, remove IC9 from the original Printer Main Control Board and install it on the new Printer Main Control Board.

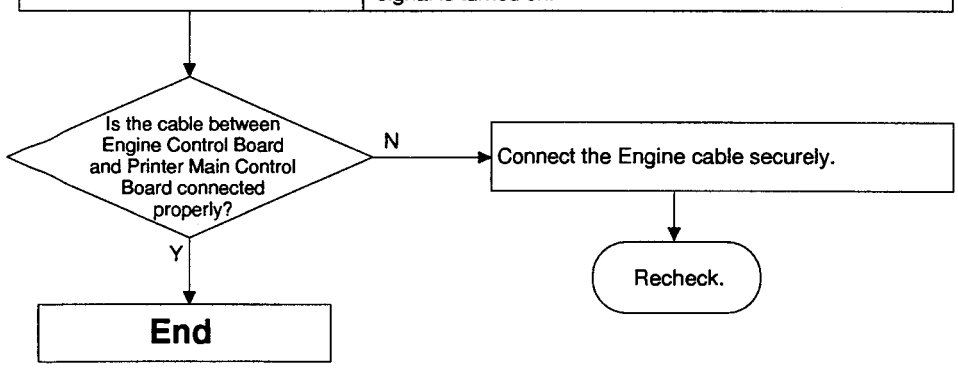
9.5.23 Printer Error 74

LCD Message	Possible Cause
Printer Error 74	Printer Main Control Board cannot detect the VSYNC signal from the engine.



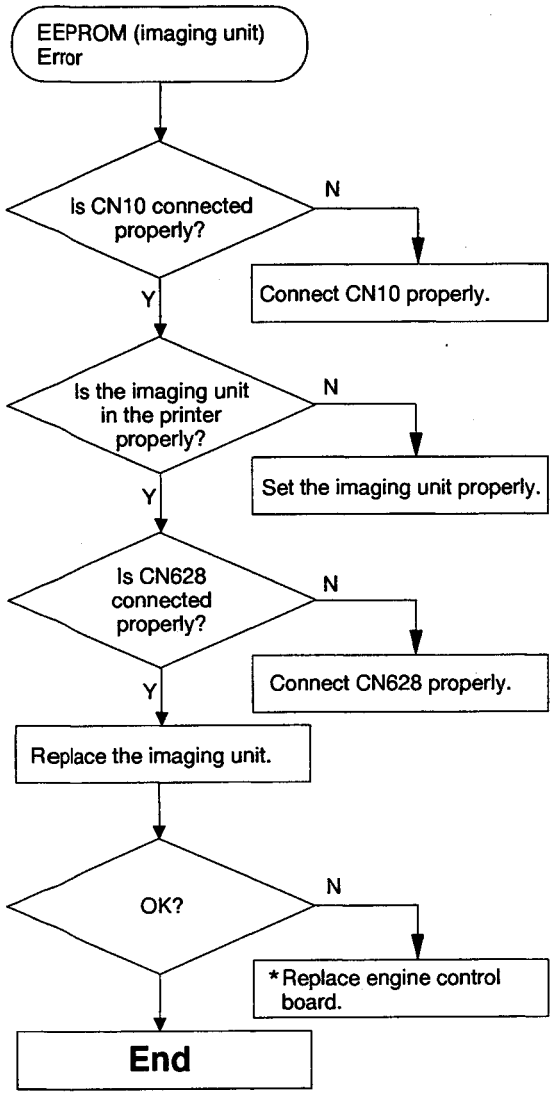
9.5.24 Printer Error 75

LCD Message	Possible Cause
Printer Error 75	Printer Main Control Board cannot detect the PPRDY signal within 800ms from the engine when the ESM signal is turned on.



9.5.25 Printer Error 76

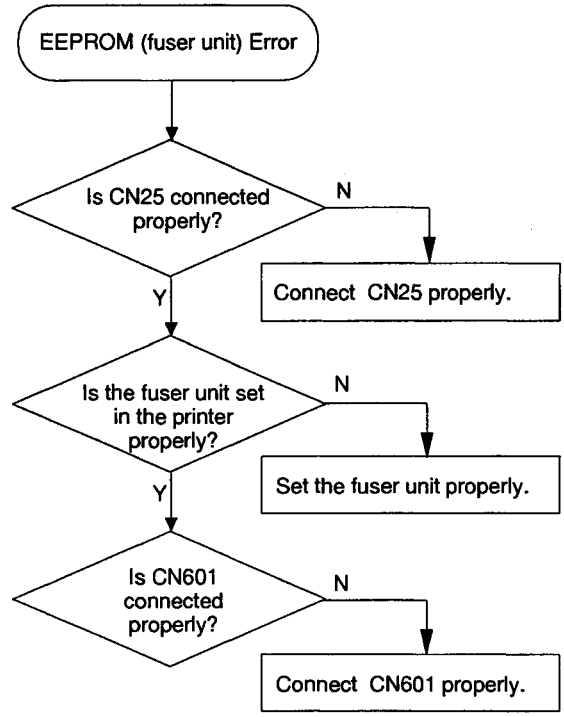
LCD Message	Possible Cause
Printer Error 76	EEPROM (imaging unit) Error



*When replacing the Engine Control Board, remove EEPROM (IC6) from the original Engine Control Board and install it on the new Engine Control Board.

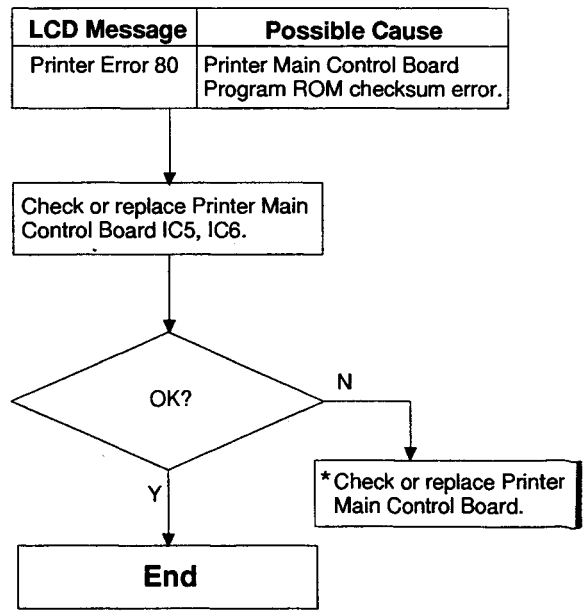
9.5.26 Printer Error 77

LCD Message	Possible Cause
Printer Error 77	EEPROM (fuser unit) Error



9.5.27 Printer Error 80

LCD Message	Possible Cause
Printer Error 80	Printer Main Control Board Program ROM checksum error.



* When replacing the Printer Main Control Board, remove IC9 from the original Printer Main Control Board and install it on the new Printer Main Control Board.

9.5.28 Printer Error 81

LCD Message	Possible Cause
Printer Error 81	Printer Main Control Board Work RAM (IC10) check Error

* Check or replace Printer Main Control Board.

*When replacing the Printer Main Control Board, remove IC9 from the original Printer Main Control Board and install it on the new Printer Main Control Board.

9.5.29 Printer Error 87

LCD Message	Possible Cause
Printer Error 87	Printer Main Control Board ASIC#2 (IC3) Internal memory or SRAM (IC11-IC14) check Error

* Check or replace Printer Main Control Board.

*When replacing the Printer Main Control Board, remove IC9 from the original Printer Main Control Board and install it on the new Printer Main Control Board.

9.5.30 Printer Error 88

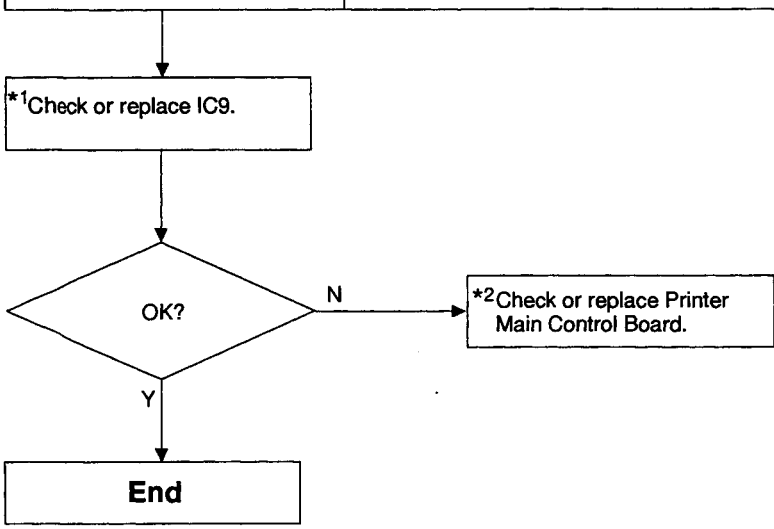
LCD Message	Possible Cause
Printer Error 88	Printer Main Control Board ASIC#3 (IC4) Internal memory or SRAM (IC25-IC29) check Error

* Check or replace Printer Main Control Board.

* When replacing the Printer Main Control Board, remove IC9 from the original Printer Main Control Board and install it on the new Printer Main Control Board.

9.5.31 Printer Error 90

LCD Message	Possible Cause
Printer Error 90	Printer Main Control Board EEPROM (IC9) Access Error

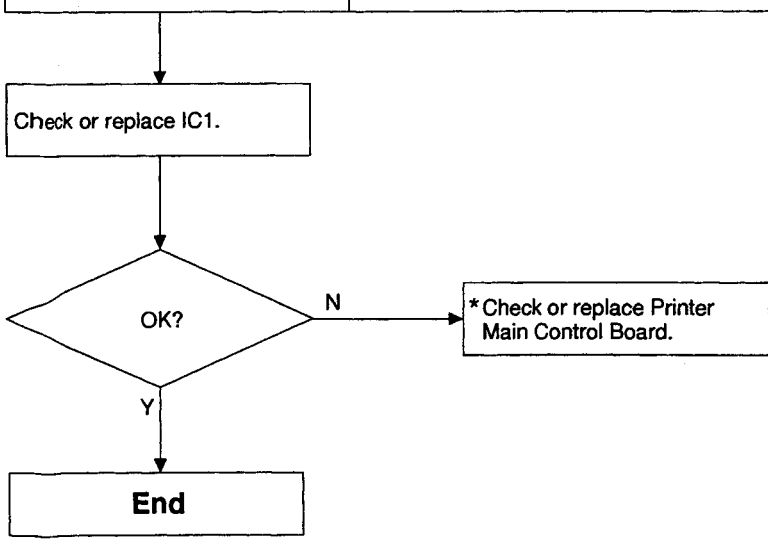


*1 When IC9 is replaced, the selectable settings through the printer's panel are reset and the life counter values are deleted. Therefore, the printer settings must be reset (see section 3.1). The life counter value can not be reset. The life counter value indicated in the LCD will be different from the actual. However, the printer will function normally.
"Printer Error 90" will be displayed on the LCD, when power on after replacing IC9. Turn the power off, then on to clear the error message.

*2When replacing the Printer Main Control Board, remove IC9 from the original Printer Main Control Board and install it on the new Printer Main Control Board.

9.5.32 Printer Error 91

LCD Message	Possible Cause
Printer Error 91	Printer Main Control Board CPU (IC1) Error



* When replacing the Printer Main Control Board, remove IC9 from the original Printer Main Control Board and install it on the new Printer Main Control Board.

9.5.33 Printer Error 92

LCD Message	Possible Cause
Printer Error 92	Printer Main Control Board SCSI controller (IC30) Error

↓

* Check or replace Printer Main Control Board.

* When replacing the Printer Main Control Board, remove IC9 from original Printer Main Control Board and install it on the new Printer Main Control Board.

9.5.34 Printer Error 94

LCD Message	Possible Cause
Printer Error 94	Printer Main Control Board Parallel I/F controller (IC32) Error

↓

* Check or replace Printer Main Control Board.

*When replacing the Printer Main Control Board, remove IC9 from original Printer Main Control Board and install it on the new Printer Main Control Board.

9.5.35 Printer Error 95

LCD Message	Possible Cause
Printer Error 95	Printer Panel Error

↓

Is the cable between Front Panel and Front Panel Relay Board connected securely?

N → Connect the Panel cable securely. → Recheck.

Y ↓

Check or replace Front Panel.

↓

OK?

N → * Check or replace Printer Main Control Board.

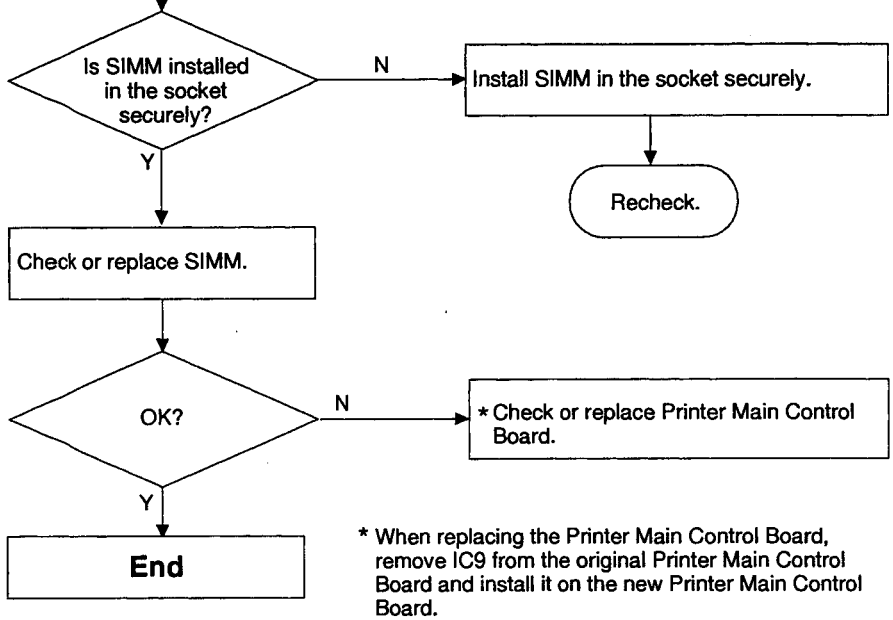
Y ↓

End

*When replacing the Printer Main Control Board, remove IC9 from original Printer Main Control Board and install it on the new Printer Main Control Board.

9.5.36 SIMM Check Error

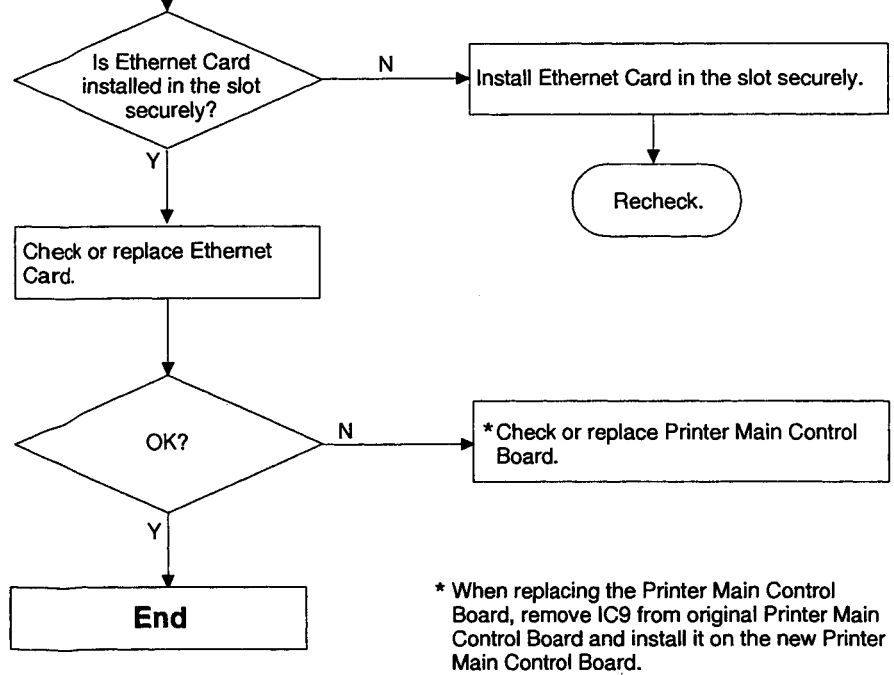
LCD Message	Possible Cause
SIMM Check Error	Printer Main Control Board SIMM check error has occurred at power on.



* When replacing the Printer Main Control Board, remove IC9 from the original Printer Main Control Board and install it on the new Printer Main Control Board.

9.5.37 Ethernet Card Check Error

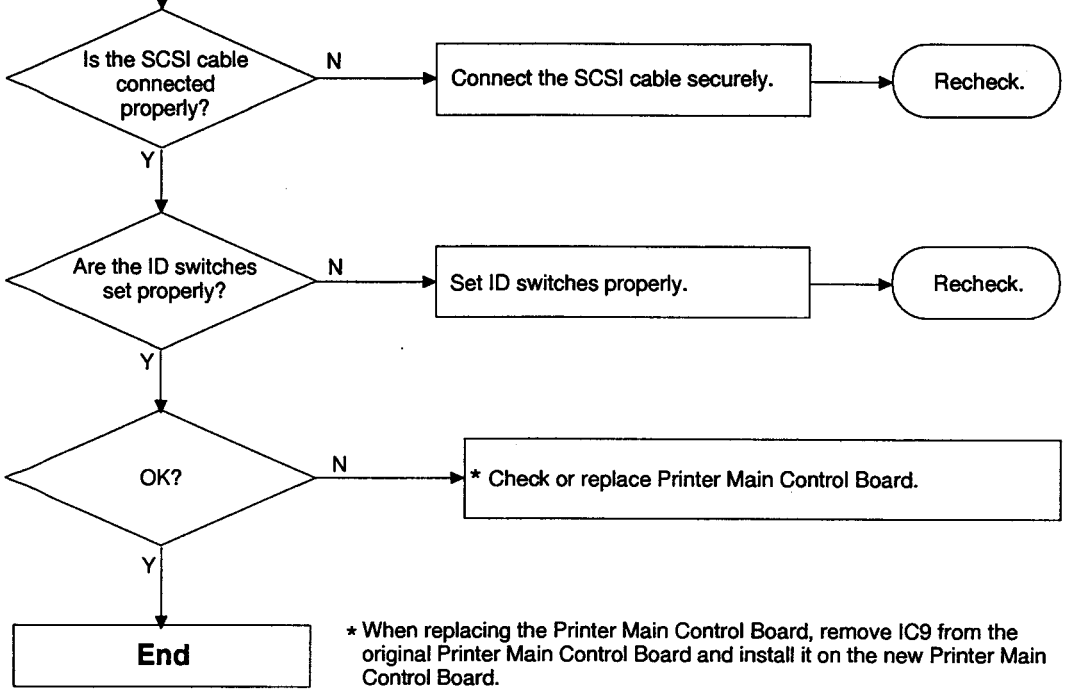
LCD Message	Possible Cause
Ethernet Card Check Error	Ethernet Card I/F Error



* When replacing the Printer Main Control Board, remove IC9 from original Printer Main Control Board and install it on the new Printer Main Control Board.

9.5.38 SCSI Error

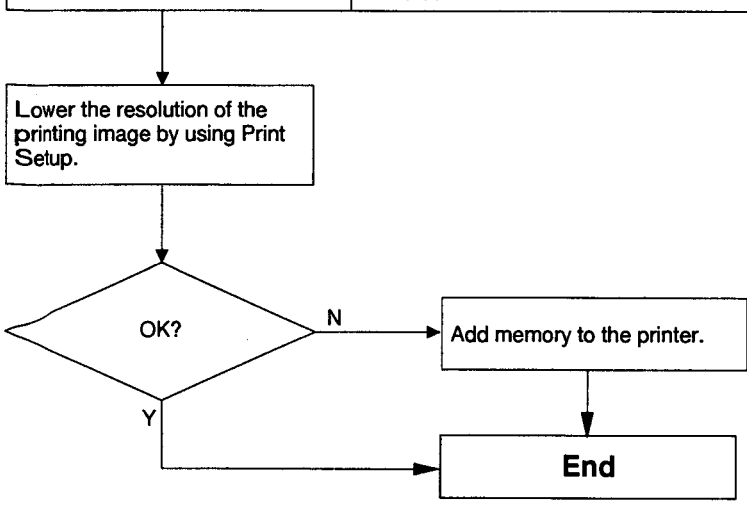
LCD Message	Possible Cause
SCSI Error	Cannot establish the SCSI connection to the Computer



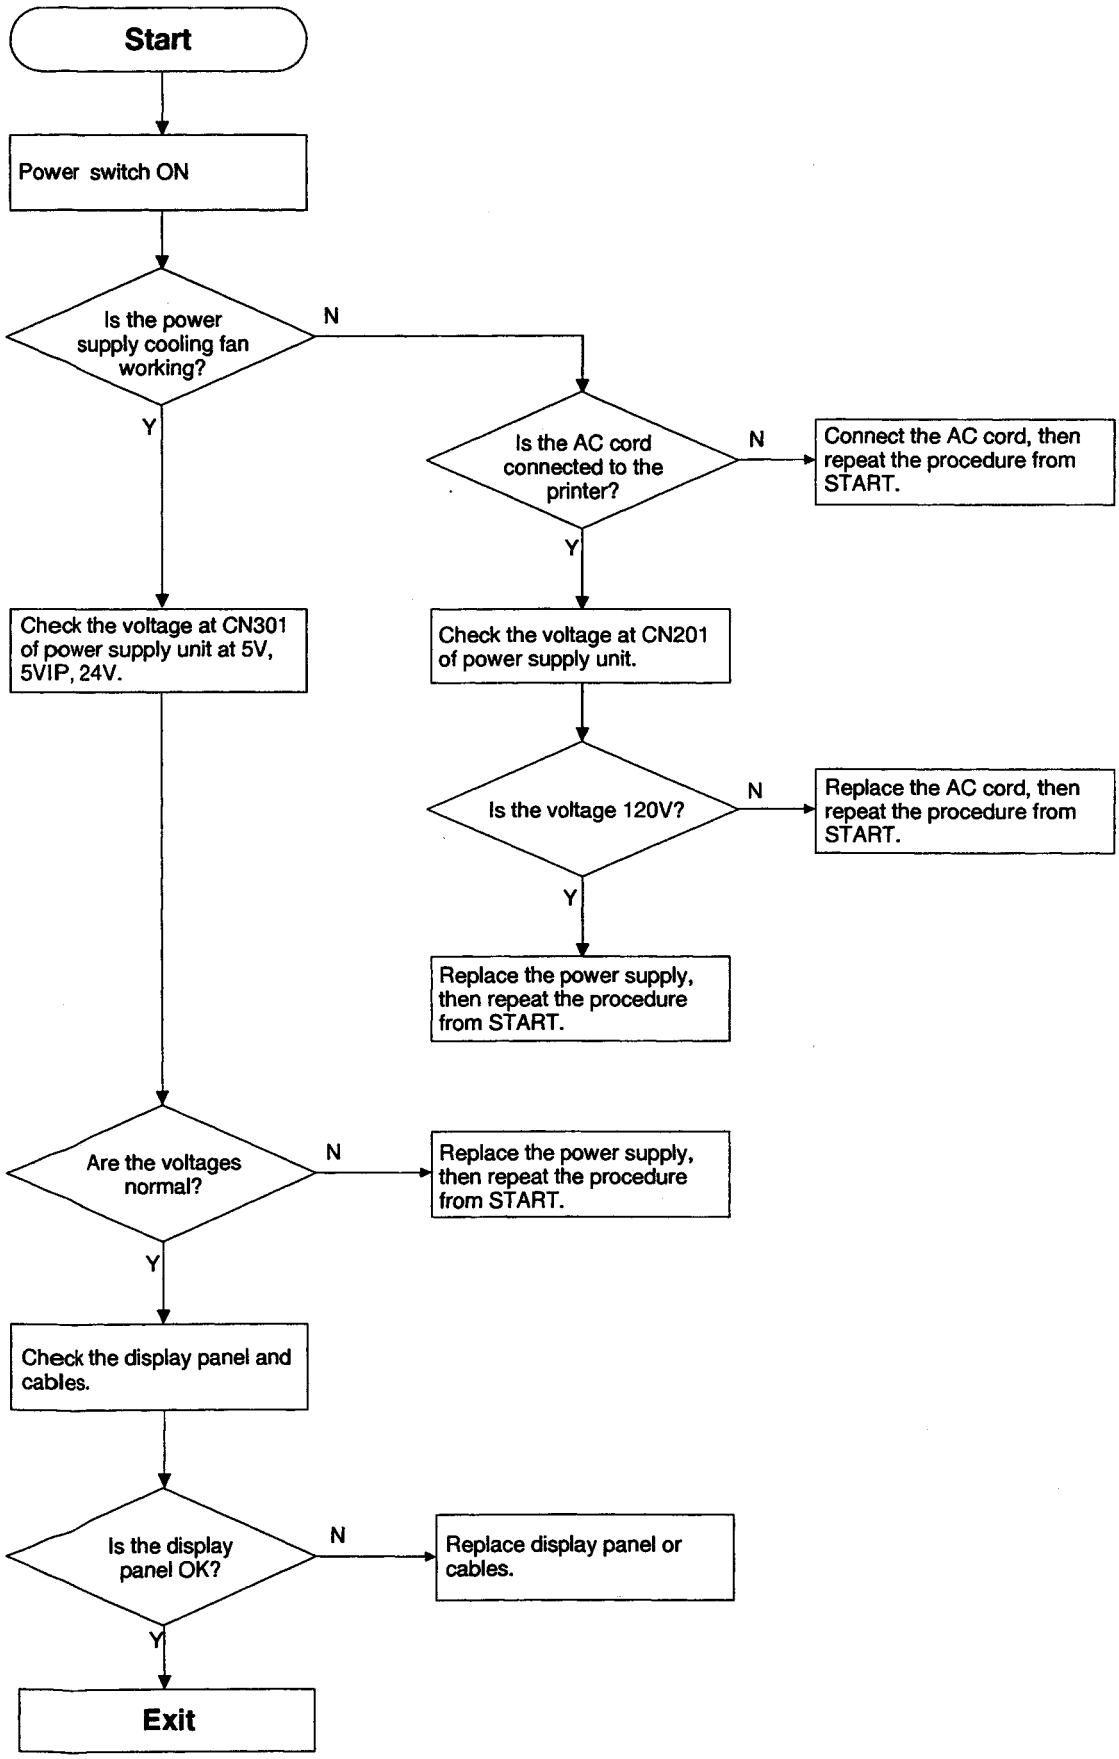
* When replacing the Printer Main Control Board, remove IC9 from the original Printer Main Control Board and install it on the new Printer Main Control Board.

9.5.39 Memory Overflow

LCD Message	Possible Cause
Memory Overflow	Print data is larger than the capacity of the memory installed



9.6 No Message Section



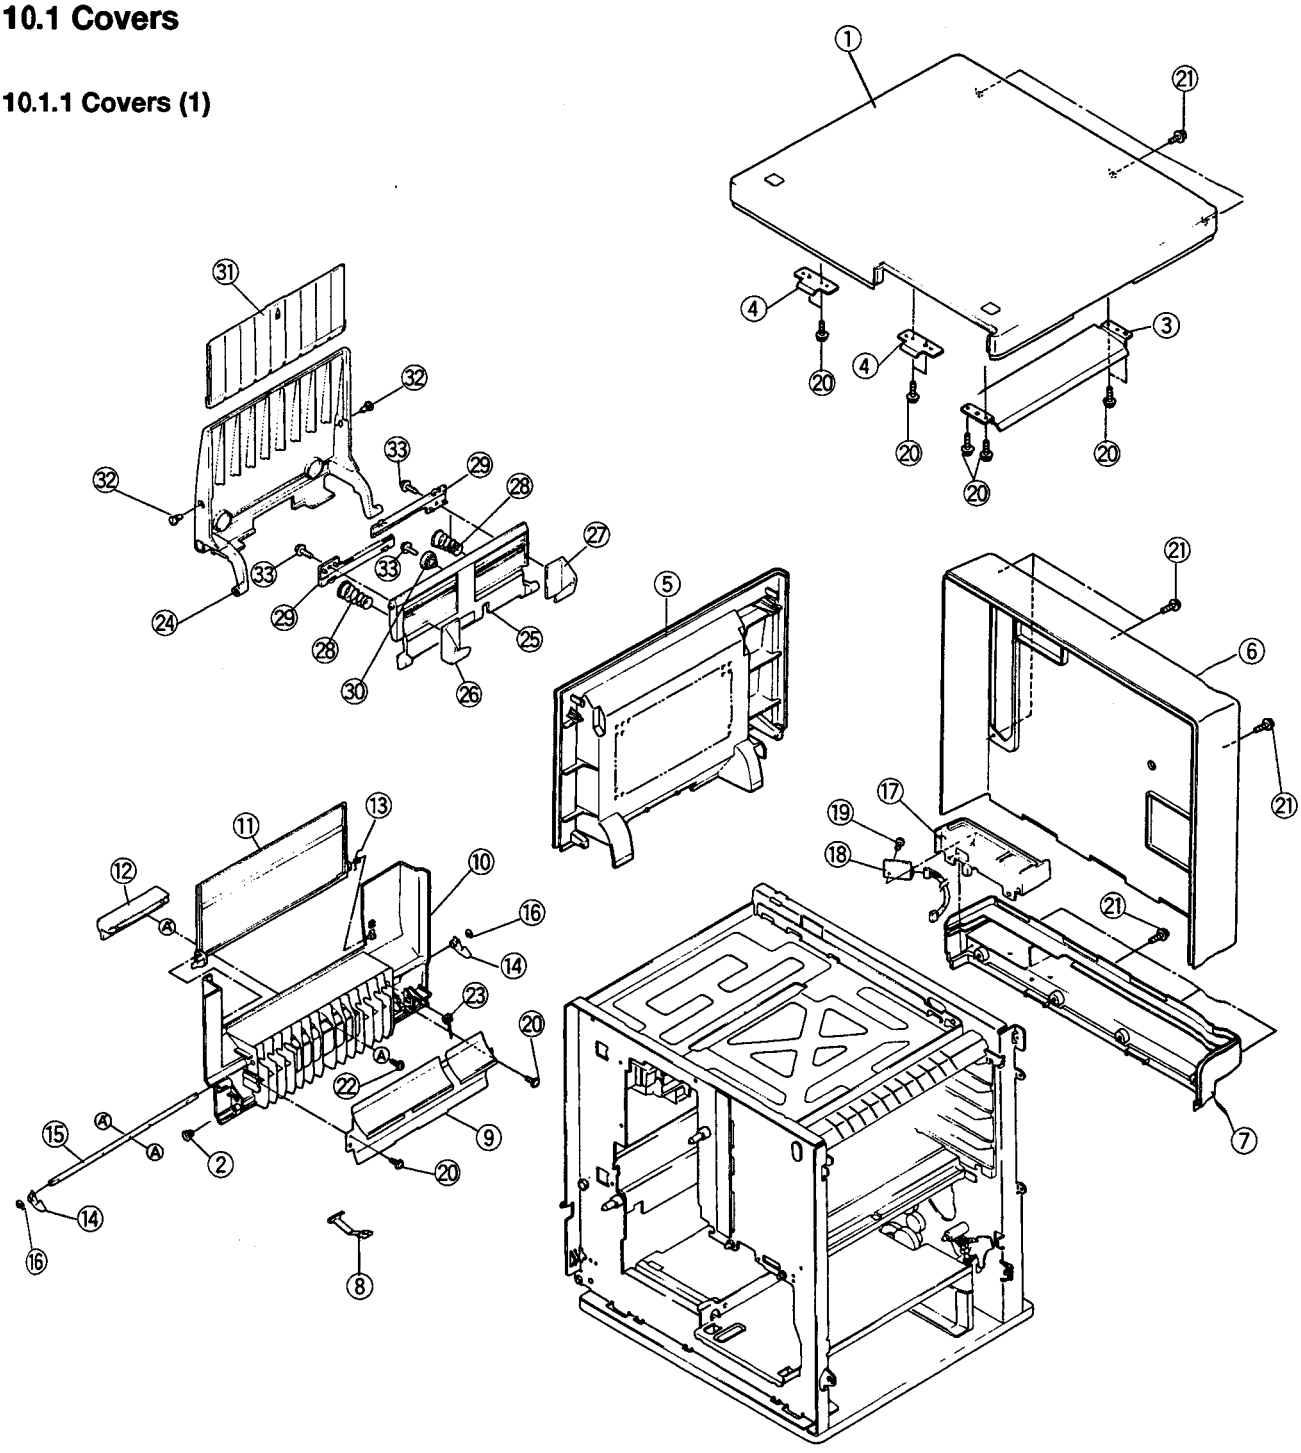
10. Replacement Parts List with Lubrication Guide

Notes:

1. Important safety notice.
   Components identified by ⚠ have special characteristics important for safety.
   When replacing any of these components, use only manufacturer's specified parts.
2. The S mark is for service standard parts and may differ from production parts.
3. The marking (RTL) indicates that the Retention Time is limited for this item. After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependent on the type of assembly and in accordance with the laws governing part and product retention. After the end of this period, the assembly will no longer be available.

10.1 Covers

10.1.1 Covers (1)



Ref.No.	Part No.	Part Name and Description	Per Set	Remarks
1	PJKFA0008Z	Top Cover	1	
2	PJDS50711Z	Spring	1	
3	PJUG173Z	Paper Guide	1
